ABSTRACT OF THE DISSERTATION

Staging the Saints:
Mormonism and American Musical Theater

American musical theater is often dismissed as frivolous or kitschy entertainment. But what if musicals actually mattered a great deal? What if perhaps the most innocuous musical genre in America actually defines the practices of Mormonism—America’s fastest-growing religion? I address these questions in this dissertation by applying methodologies from Musicology, Voice Studies, Performance Studies, and American Studies to the unexpected yet dynamic relationship between Mormonism and American musical theater. In the introduction, I discuss how speaking on behalf of another person is rooted within both Mormonism and musical theater and argue for its critical examination. In Chapter 1, I argue that Mormonism and American musical theater are cut from the same ideological cloth and that musicals are intertwined with Mormon theology. Chapter 2 looks at the ways Mormons used musical theater as an assimilative tool during the mid-twentieth century. Chapter 3 looks at how Mormons used musical theater to “whiten” dark-skinned Polynesians and

Native Americans, converting them, in essence, to Mormonism. In Chapter 4 I argue that the Mormon musical *Saturday's Warrior* helped Mormons bypass the strict system of order within Mormonism called Correlation. In Chapter 5, I suggest the Broadway musical *Book of Mormon* can be read as a critique of Correlated Mormonism.

My investigation led to my conclusion that voice and vocal theatricality are deeply rooted concepts in Mormonism, to such a degree that I claim Mormons practice a *theology of voice*. I argue that analyzing the Mormon relationship with musicals from the mid-nineteenth century to today helps conceptualize the phenomenon of speaking on behalf of another person (or God), a process I call the *vicarious voice*. By closely examining voice in Mormonism and musical theater, I construct a theoretical approach to the performance of vocal vicarity. I conclude that, in an effort to become gods themselves, Mormons use the musical stage to practice transforming into someone they are not, modeling closely the theatrical qualities of Jesus and other spiritual leaders in Mormon mythology. Thus, learning to vicariously voice another person on the musical stage actually draws the faithful closer to godliness.

Theatre Manual, 1980

In 1838, Joseph Smith led a small group of Mormon men on an exploration of Daviess County, Missouri.¹ The county had been renamed only two years before in honor of Major Joseph Hamilton Daveiss, who was killed in 1811 at the Battle of Tippecanoe. Daveiss had unsuccessfully prosecuted vice president Aaron Burr, though his military honors carried his namesake into a legacy with an unfortunate (and apparently systemic) typographical error. Three other American counties

¹ A few notes about wording. Throughout the dissertation, I frequently refer to Joseph Smith by his first name only. This is in keeping with common Mormon practice of speaking of the founding prophet as “Joseph” or “Brother Joseph” and in order to distinguish between the prophet and the many other Smiths in Church leadership. I use “Mormon” in reference to members of the Church of Jesus Christ of Latter Day Saints in order to be as inclusive of various Mormon beliefs and practices as possible, including those that predate the establishment of the LDS Church and those that the mainstream Church does not condone. Finally, for clarity any reference to *Book of Mormon* the musical will be italicized, and any reference to the sacred text The Book of Mormon will not.

were named after Daveiss—in Indiana, Illinois, and his home state of Kentucky—yet all three are misspelled. Daviess County, Missouri, however, was the youngest of these frontier spaces; in the early nineteenth century, western Missouri marked the figurative end of modern civilization and the beginning of a seemingly endless stretch of wilderness, Indian settlements, and untapped potential.

The ferry guiding Joseph and his companions up the Grand River docked on the bank so that its travelers could see up close what had been spotted from afar. Someone from the party noticed atop a high bluff what appeared to be rocky ruins, perhaps of an ancient altar, and directed Joseph toward it. This moment of contact with a presumed ancient relic brought the surrounding wilds into focus, like Wallace Steven’s anecdotal jar on the hill. With a broad glance over the unceasing prairie before him, accompanied by a dramatic silence, Joseph spoke into existence a magisterial transformation of the ordinary into the sacred: “This is the valley of God in which Adam blessed his children, and upon this very altar Adam himself offered up sacrifices to Jehovah. . . . We will lay out a city which shall be called Adam-ondi-Ahman. Here Adam, the Ancient of Days, shall come to visit his people.”² Brigham Young, who would succeed Joseph as the second president and prophet of the Mormons, or Saints as they called themselves, later recounted Joseph’s revelation that

the garden of Eden was in Jackson Co Missouri, & when Adam was driven out of the garden of Eden He went about 40 miles to the Place which we Named Adam Ondi Ahman, & there built an Altar of Stone & offered Sacrifize. That Altar remains to this day. I saw it as Adam left it as did many others, & through all the revolutions of the world that Altar had not been disturbed.³

Other witnesses add that “about half a mile or between a quarter and a half of a mile” away from that spot, the party discovered a slightly elevated knoll “which was thickly dotted with cobble stones.” As Oliver B. Huntington recorded his second-hand account in 1895, “‘Here,’ the Prophet and Seer said, ‘Adam built a tower, from the top of which he could see all the surrounding country, and this knoll is formed of its remains.’” Huntington continues with this testimony: “I want my friends, and in fact all people, to understand that Joseph Smith could see events that transpired and people who lived hundreds or thousands of years ago as if they were then before his eyes.”⁴

What Joseph saw “before his eyes” that afternoon was less transformative than his words that followed. Joseph’s pronouncement modulated the mundane prairie surrounding him and his followers into a familiar and sacred landscape. In so doing, he effectively rewrote the first seven chapters of the book of Genesis and placed the American continent as central to the foundations of humanity. Brigham Young most explicitly connected the dots of Joseph’s declaration with its current geo-political identity: “In the beginning, after this earth was prepared for man, the Lord commenced his work upon what is now called the American continent, where the Garden of Eden was made. In the days of Noah, in the days of the Boating of the ark, he took the people to another part of the earth. . . . There the human race, in its second start on earth,” Young concludes, “began to multiply and fill the earth.”⁵

A North American Eden had been a well-trodden topic dating back to the earliest Puritan settlers, but largely figuratively so. By the nineteenth century, matters had become much more explicit. Many of Joseph’s contemporaries, including Nathaniel Hawthorne and Herman Melville, found within Adam a purity and fierce independence, fitting qualities of a new American hero. Twentieth-century observations of this American myth have been attested by the likes of Leo Marx,

Henry Nash Smith, and R.W.B. Lewis. “It is not surprising,” Lewis remarks, “in a Bible-reading generation, that the new hero (in praise or disapproval) was most easily identified with Adam before the Fall.

Adam was the first, the archetypal, man. His moral position was prior to experience, and in his very newness he was fundamentally innocent. The world and history lay all before him. And he was the type of creator, the poet par excellence, creating language itself by naming the elements of the scene about him. All this and more were contained in the image of the American as Adam.⁶

Like Joseph standing on the precipice of a vast grassland and speaking for the space a sacred name, Lewis’s “American Adam” likewise distinguished himself characteristically as a creator whose naming of his surrounding world was a “heroic embodiment of a new set of ideal human attributes.”⁷ Indeed, as much as Melville’s characters and Hawthorne’s sentiment explore figuratively the Adamic hero, Joseph’s religion took the argument to its extreme by declaring the land those writers and characters trod upon as ancient and exceptional, the place of original human-Divine interaction. Even more, with Joseph’s revelation the Mormon faith, by 1838 only eight years old, now had a (literal) foundation upon which to build new cities, new prospects—indeed, a new American religion. As in Hawthorne’s short story “Earth’s Holocaust,” where a community gathers on the edge of civilization to burn all the traps and artifacts of the Old World in order to start anew; or in *The House of Seven Gables*, where Holgrave argues against permanent public buildings, suggesting rather that they should be built to crumble “as a hint to people to examine and reform the

institutions which they symbolize,”⁸ Joseph too, with a gestural gaze, sweeps away the past by claiming a new kingdom to be built upon the ruinous conceptions of past generations. He was also attuned to the peculiarities of ancient speech; years earlier, when Joseph first met his lifelong friend and prophetic successor Brigham Young, Joseph declared that Young spoke with the language of Adam.⁹ The young prophet’s voice was a powerful tool, one that could identify ancient sounds or reshape the frontier with a single word.

This moment conveniently marks the confluence of America and, as Harold Bloom argues, *the American religion: Mormonism*. Nineteenth-century Mormonism, however, was not an entirely comfortable identity to inhabit. Six years after his initial exploration into Daviess County, Joseph Smith was killed in a room above an Illinois jailhouse. In many ways, his murder was the rupture of an increasingly tense relationship Mormons maintained with their non-Mormon neighbors in Missouri, Illinois, and Ohio. Unpopular religious practices, self-righteous pronouncements, a penchant for rapid conversions, and, perhaps most importantly, the ongoing threat of a political bloc made Mormons a difficult bunch to tolerate, particularly on the wilds of nineteenth-century frontier America.

For Mormons, of course, life in the wilderness was both a necessity and a divine challenge. As members faced harassment from surrounding communities, Joseph spread the membership around various settlements, first in Ohio, then progressively moving westward into Missouri and eventually Illinois, where Mormons built the city of Nauvoo, at that time the second-largest city in Illinois. On the other hand, Mormons understood the “barren wilderness” of middle America to be a place traced with divinity, and therefore a place—precisely because of its difficulties—able to wear

smooth the “huge, rough stone rolling down from a high mountain,” as Joseph once referred to himself.¹⁰ “Life in a garden is relaxed, quiet, and sweet,” writes Leo Marx in *The Machine in the Garden*, “but survival in a howling desert demands action, the unceasing manipulation and mastery of the forces of nature, including, of course, human nature. Colonies established in the desert require aggressive, intellectual, controlled, and well-disciplined people. It is hardly surprising that the New England Puritans favored the hideous wilderness image of the American landscape.”¹¹ As the Saints would soon discover, life in the desert would take on entirely new meaning after the death of their beloved Prophet.

Despite, or perhaps in spite of, Mormonism’s at times tenuous presence in America, it occupies a distinct place in American religious history. Mormonism emerged at a transitional period in the American conscience. Joseph Smith claimed that in 1820 he was visited by heavenly beings—depending on the version he told, these beings were either an angel, Jesus Christ, or, in what is now the canonical version of his “First Vision,” both God and Jesus Christ—and told that all other religions were incorrect and that he should not join any of them. Later, he was visited by an angel named Moroni, who directed Joseph to a hill near his home in Palmyra, New York, where an ancient record was buried. Smith later translated this ancient document, which was written on plates of brass, and published it as *The Book of Mormon*. The story mostly entails a single Jewish family that

¹⁰ Joseph spoke these words in May of 1843, almost one year before his death: “I am like a huge, rough stone rolling down from a high mountain; and the only polishing I get is when some corner gets rubbed off by coming in contact with something else, striking with accelerated force against religious bigotry, priestcraft, lawyer-craft, doctor-craft, lying editors, suborned judges and jurors, and the authority of perjured executives, backed by mobs, blasphemers, licentious and corrupt men and women—all hell knocking off a corner here and a corner there. Thus I will become a smooth and polished shaft in the quiver of the Almighty, who will give me dominion over all and every one of them, when their refuge of lies shall fail, and their hiding place shall be destroyed, while these smooth-polished stones with which I come in contact become marred.” See Discourse to Saints, May 1843; *DHC* 5:401.

fled Jerusalem shortly before its destruction and, by the direction of God, sailed across the sea to what is now the American continent. Eventually, a schism materializes within the family and two warring tribes—the Nephites and Lamanites—battle one another over the course of several centuries, ultimately resulting in the complete and bloody destruction of the Nephites. Joseph claimed that the Lamanites continued to live upon the American continent, and that the modern-day Indians were Lamanite descendants and, therefore, among the Lost Tribes of Israel.

The Book of Mormon, with its narrative problem of a corrupt urban center and the beckoning of new life and escape within nature framing a plot resolution, fits nicely within the nineteenth-century literature of American escapism into its interior and pure wilderness. Journalist Avi Steinberg even goes so far to claim that “American literature got serious at Hill Cumorah,” the place where Joseph discovered the ancient plates.¹² Henry David Thoreau’s residency near Walden Pond perhaps most poignantly situates the necessity for man in the industrial age to escape the limitations of urban life for respite available only in nature. As Leo Marx has aptly pointed out, nineteenth-century American writers were haunted by the visage of industrialization impinging upon the uncorrupt quality of the natural world. Even Thoreau notes the sonic interruption of a distant train whistle while he attempts to recuse himself temporarily of modern social confinements. The chilling scene in *Moby Dick*, when the exploration inside a dead and bloated beached whale suddenly shifts to the interior of a mill also demonstrates the complex relationship nineteenth-century thinkers maintained about the intrusion of modern life into their escapist plot. While The Book of Mormon takes place in a time far-removed from industrial America, its protagonists likewise escape from a corrupt city only to find themselves almost immediately in the thralls of a bloody and vitriolic familial dispute that necessitates the means of producing large amounts of weaponry, among other

tools, from the belly of their new American land. If the characters in Joseph's story have any secular lesson for its modern readers, it is that the dual industries of warfare and progress quickly collapse any perceivable divide between nature and human society. As with Captain Ahab, the only resolution possible for such an attempt to remove oneself from the world is a blithering destruction by the hands of the natural world once valued precisely for its untamed potential.

This dissertation takes these and other American themes of Mormonism as points of departure in examining how and why Mormons have so closely adopted the vocal and theatrical traditions of American musical theater. By drawing attention to the vocal and listening practices of Mormons over almost two hundred years of religious practice, I am suggesting that a sensorial methodology can amplify how aural traditions can and do affect the historical narrative. I echo historian Mark M. Smith's conviction that underestimating or ignoring altogether the aurality of historical agents "contributes to our deafness by denying us an understanding of how political sounds were shaped by, and in turn influenced, cultural whispers, economic booms, and social screams."¹³ Indeed, the story of Mormons and musical theater addresses a central concern in my research, which is how new ways of *sounding* create opportunities for other ways of *living*. Thus, throughout this study, I look at the way in which various American ideologies were absorbed into Mormonism, first in the primacy of the voice in Mormon theology and the unusually rich performative traditions Mormonism promotes, and second with the elevation of both the voice and the theater as sites of cultural negotiation, culminating in the tradition of musical theater as a unique expressive tool of Mormon culture. I argue that the histories of Mormonism and American musical theater should be seen as ideologically entwined, and that a peculiar American quality of vocality has emerged from the junction of these two iconic American traditions.

The Vicarious Voice

As Mark Twain reportedly once said, “Only kings, presidents, editors, and people with tapeworms have the right to use the editorial ‘we.’”¹⁴ The line is funny because Twain’s exceptions to what is commonly referred to as the “editorial ‘we’” point to the often-absurd faith we place in voices spoken on behalf of others. Vocal vicarity is also a phenomenological conundrum the ears must sort out for us. Those who speak with the “editorial we” produce a sound undeniably their own that is nonetheless assumed to be heard as not belonging to them, or at least not belonging exclusively to them. I call this sonic surrogacy the *vicarious voice*. To speak on behalf of another is to perform a vicarious voice, a theatrical posture that requires listeners to hear within the sound of a speaker the message of a voice unspoken. This ventriloquizing phenomenon happens regularly: Attorneys speaking on behalf of clients, actors speaking as proxy for the character, and even machines broadcasting a person’s voice are just a few examples of the vicarious voice, its performative nature, and its functions in the modern world.

To be sure, humans everywhere speak for and over one another numerous times a day, whether legally, ceremonially, figuratively, or literally. Parents, caretakers, physicians, women who are pregnant, translators, Wall Street investors, CEOs, kings, and editors, as well as machines like phonographs, tape decks, iPods, and YouTube videos, all speak on behalf of another, promiscuously intermingling one voice with the preemptive desires of an (often) unseeable, non communicative other. The practice can be quite useful. Vocal vicarity ensures that transactions, final wishes, or shared interests are kept and, in this way, vicarity is essential to a modern way of life. Indeed, as the frequent misattribution of Twain’s phrase attests, the vicarious voice allows someone to be present

¹⁴ Although often attributed to Twain, this phrase has an unclear provenance. For a more historical examination of the quotation, see Garson O’Toole’s investigative work on *Quote Investigator*, <http://quoteinvestigator.com/2015/06/13/we/> (Accessed December 8, 2016).

when unrepresentable, awake when asleep, and even to be alive when dead; its messengers arrive like Hermes on winged heels to deliver words otherwise left unheard. Truly, speaking for someone else makes the impossible possible.

Yet Twain's humor defends against a phenomenon problematic in spite of its usefulness. Speaking for another person has sometimes been a source of trouble since there always remains the possibility that the messenger is being untruthful and that the voice heard is not really communicating what it says it is. Listeners must contextualize the vicarious message, and understand that the voice heard is not the *actual* voice of the unseen but what they are hearing is a voice conveying something essential about a voice they cannot hear. This requires a listening technique where listeners must separate the vocal sound from the body it comes from in order to understand the message as vicariously delivered.

The voice tells us a lot about someone's identity, or we at least ascribe an identity based on the voices we hear. When voices don't match the bodies we believe they should belong to, we are easily bamboozled. Ventriloquists, for example, fool audiences with thrown voices that seem to come from illogical places. The line between what the actor speaks and what the character says is a tautological puzzle, often leading listeners to disbelieve that the people behind the camera or on the stage do not in some way share the same qualities as the characters they inhabit. Joe Cocker sings with a voice coded as black, and men singing falsetto are described as sounding like women. Today, machines designed to speak more and more like humans create new anxieties about the limits of humanity and ask old questions about what makes us human in the first place.

The practice of speaking on behalf of another person, therefore, is common, everyday, and in some cases indispensable to a certain way of life; it is the unspoken that goes spoken, and we rarely think twice about it. Yet to speak vicariously (or to listen vicariously) carries sometimes-metaphysical implications of authority and authenticity that are fundamental to most social

convictions. In religious communities, perhaps more than in any other sociality, the practice of a vicarious voice can be crucial. The question “Who speaks for God?” has been a particularly volatile and lingering one. In religious terms, the vicarious voice describes the sensual experience of hearing God’s voice emanating from a body either unseen or clearly not his own, as well as speaking the voice of God as a sonic qualifier of one’s religious authority. Pastors and popes, prophets and TV evangelists, grandmothers and infants, martyrs and revolutionaries, the sane and the institutionalized—all have claimed or been claimed to speak for God. These voices are of comfort to the believing and the bane of the deceived, but in no way can religion escape the puzzle of the vicarious voice of God. To be religious, especially in a secular age, is to come to terms with the inevitability of mediation and vicarity.

According to the typical biblical interpretation of creation, for example, voicing and vocal sound animate and emanate from the heavens, produced by an unseen Creator: “And God said, Let there be light: and there was light.”¹⁵ If humans were able to be present at the beginnings of the universe, this resounding voice would lack a visual referent. The voice would be heard, its sound waves felt in the body, but it could not be traced back to a speaking body. A voice, in other words, would speak form into the universe yet itself carry no form whatsoever. Mladen Dolar called this the *acousmatic voice*—simply put, it is a voice which we cannot locate.

Voice scholars in several disciplines, including and especially musicologist Nina Eidsheim, have recently been building from Dolar’s terminology a framework of identification which listeners must use to judge incoming messages (who is speaking, and how can I know for sure?)—what some

¹⁵ Genesis 1:3. All biblical references are taken from the King James translation, which is the official version used by the Mormon Church.

have called the “acousmatic question.”¹⁶ The always present acousmatic question brings into question the identity of any speaker as well as our own motives and the practices of listening we use to identify voices as familiar, unfamiliar, trusted, or dangerous. As Anne Carson reminds us, “It is in large part according to the sounds people make that we judge them sane or insane, male or female, good, evil, trustworthy, depressive, marriageable, moribund, likely or unlikely to make war on us, little better than animals, inspired by God.”¹⁷ In this dissertation, I recognize the truth of Carson’s observation, but also want to build from the work of Eidsheim and others to question the guiding assumption of such a statement—I want to know under what conditions the sounds people make are made and in what ways we as listeners have been conditioned to hear them as qualifiers of another person’s identity or disposition, particularly when the divine is invoked. If a voice cannot be located—or if the message is being voiced by a proxy body—then what proof do listeners have that what they are listening to is in fact the voice of God? This is the crucial question on which all prophetic religion hangs in the balance.

A Theology of Voice

Mormon theology offers a different perspective on this vocal dilemma, for two principal reasons. First, Mormon cosmology dictates that God is not an amorphous spirit but instead has a body of flesh. This was confirmed in 1820 to Joseph Smith during his First Vision, when the

¹⁶ The concept of the acousmatic voice or sound originated with Pierre Schaeffer, who used it to describe how Pythagoras’s disciples listened to his voice through a curtain. In Schaeffer’s words, the acousmatic refers to “a sound that one hears without seeing the causes behind it.” See Pierre Schaeffer, *Traité des Objets Musicaux* (Paris: Éditions du Seuil, 1966), 91. The field of voice studies is rapidly growing and interdisciplinary. Notable texts in voice and sound studies include Nina Eidsheim, *Sensing Sound: Singing and Listening as Vibrational Practice* (Durham: Duke University Press, 2015); Brian Kane, *Sound Unseen: Acousmatic Sound in Theory and Practice* (New York: Oxford University Press, 2014); and Adriana Cavarero, *For More than One Voice: Toward a Philosophy of Vocal Expression*, translated and with an introduction by Paul A. Kottman (Palo Alto: Stanford University Press, 2005).

fourteen year old found a quiet place in a grove of trees near his home to pray about which church he should join. In an answer to his prayer, Joseph saw both God and Jesus Christ in the flesh, and God spoke to Joseph with a mouth like a human's. In his personal history, Joseph recounted the experience.

After I had retired to the place where I had preciously designed to go, having looked around me, and finding myself alone, I kneeled down and began to offer up the desires of my heart to God. I had scarcely done so, when immediately I was seized upon by some power which entirely overcame me, and had such astonishing influence over me as to bind my tongue so that I could not speak. Thick darkness gathered around me, and it seemed to me for a time as if I were doomed to sudden destruction.

But, exerting all my powers to call upon God to deliver me out of the power of this enemy which had seized upon me, and at the very moment when I was ready to sink in despair and abandon myself to destruction—not to an imaginary ruin, but to the power of some actual being from the unseen world, who had such marvelous power as I had never before felt in any being—just at this moment of great alarm, I saw a pillar of light exactly over my head, above the brightness of the sun, which descended gradually until it fell upon me.

It no sooner appeared than I found myself delivered from the enemy which held me bound. When the light rested upon me I saw two Personages, whose brightness and glory defy all description, standing above me in the air. One of them spake unto me, calling me by name and said, pointing to the other—*This is My Beloved Son. Hear Him!*¹⁸

Ironically, the storied First Vision depends less on seeing than on the practice of speaking and hearing. God's words "This is my beloved son. Hear Him!" grant authority to Jesus to speak on

his behalf. The gospel of Luke records that the disciples Peter, James, and John heard the same words during Jesus's transfiguration on the mount. For whatever reason, Joseph's vision was another confirmation that God chooses to delegate his voice to others, both divine and human. This gives the power of vicarity a divine mandate. God's predilection for vicarious voices is a curious quality of an omnipresent being. We know from experience that, as with the telephone game, where the corruption of a message is humorously proven inevitable the more sets of ears and tongues are involved, oral communication is notoriously fickle. Nonetheless, it seems that God is happy to leave to chance that the message heard will still be the one he delivered. Or maybe God is invested (bound, even) in letting humans decipher his intent using the corruptible ways they know. Regardless, despite what Joseph's First Vision established—that the God Mormons pray to has a body of flesh, a mouth from which a voice materially emanates, which behaves in all ways like a human voice does, with reverberations that penetrate the air with the same force and majesty as that of a human, and whose material presence vibrates the eardrums of normal human beings—God chooses more often than not to let his voice be heard vicariously through the lungs and lips of his prophets.

Figure 1:

The First Vision, artist and origin unknown.

There is also a great vocal symmetry in this scene. God's speaking acts as a dramatic counterweight to Joseph's inability to speak during the experience. Joseph's tongue-tiedness seems the result of a demonic power, though, and not for a didactic purpose by God, as other biblical stories of tied tongues suggest. Most typically, biblical stories relate instances of divinely-administered muteness, often in order to draw attention to some transformation of character. An angel placed hot coals on the lips of the prophet Isaiah in order to purge his sins, and presumably discipline his speech to fit that of a prophet. Babel, while cacophonous with voices, represents a place where everyone was symbolically rendered dumb in that their voices lacked any meaning. While John the Baptist was in his mother's womb, his father Zacharias was stricken dumb. In The

Book of Mormon, a young man named Alma has an experience similar to that of Saul on the road to Damascus, except that Alma loses both his ability to speak and to see for a span of several days.

Nineteenth-century believers, on the other hand, were anything but tongue-tied. “God was hardly falling silent,” writes Leigh Eric Schmidt of the early nineteenth century. “Instead, with the crumbling of established authorities, God had more prophets, tongues, and oracles than ever before.”¹⁹ Enlightenment thinking in the early half of the nineteenth century had forged for many people an uneasy relationship with the material and supernatural world. As a result, people continued to report visions and direct communion with heavenly beings, deceased ancestors, and spirits as they had for centuries, but now, fueled by an authoritarian skepticism marred by miseducation and gullibility, those supernatural experiences had greater import as signs of Jesus’ impending return to earth.

In this intense climate, nineteenth-century spiritualist traditions flourished. Joseph spent his formative years in what was called the “burnt-over district” of central and western New York, so named for the tremendous outpouring of spiritualist practice there during the Second Great Awakening. He received direct instruction by God and Jesus Christ, as well as by Moses, John the Baptist, the disciples Peter, James, and John, Elijah, and numerous angels. But he wasn’t the only one hearing voices. Swedenborgians, Shakers, Adventists, and many other spiritualist traditions sprouted up during this same time and roughly in the same region of America, and their followers were likewise reporting similar experiences with a speaking God.

With so many claiming to speak on behalf of God, new anxieties emerged for those within earshot. As with any vocal vicarity, listeners must ask of the voice, Who is speaking? and How can I know this for certain? Vocal vicarity is a tautological puzzle, compounded in spiritualism by the

almost never-seen body of a speaking God. Rather, a human must speak God's message in the form of revelation. Thus, revelation is haunted by the question, Is God speaking through this person, or is this person speaking through the idea of God? In a fundamentally duplicitous act, the vicarious speaker maintains believability by keeping his distance as messenger, but must also be careful to not be too distanced or else the message may fail. For nineteenth-century believers, the stakes for these vicarious voices could not have been any higher—with new information from God daily, a person's position relative to heaven and hell was kept in balance by her ability to discern God's many vocal proxies. "Thus," Schmidt writes, "the modern predicament actually became as much one of God's loquacity as God's hush."²⁰

Secondly, and perhaps most crucially, Mormonism's loquacious God stands apart from others in his delegation of vocalic power. A revelation given to Joseph in 1831 suggests the power of the spoken word is implicit and not a condition of the voice carrying the message. On the contrary, no discernment is given for when the voice heard comes from God and when it comes from someone or somewhere else. The revelation is recorded as follows: "What I the Lord have spoken, I have spoken, and I excuse not myself; and though the heavens and the earth pass away, my word shall not pass away, but shall all be fulfilled, *whether by mine own voice or by the voice of my servants, it is the same.*"²¹

On the surface, this passage seems to grant God's voice to all those who believe in Him (his "servants"). God seems to be offering an authoritative position relative to his vocalic power to whomever is willing to obey him. The hierarchical premise behind God's voice in itself is not wholly new; Don Ihde writes that the liturgist "bespeaks tradition and the voices of the gods. They sound in

his voice.”²² Likewise, Adriana Cavarero writes rather poignantly that “Speech, according to the ritual formula ‘word of God,’ is what God becomes through the prophets who lend him their mouths.”²³ One consequence of a loquacious God is that, if everyone is speaking for God, then in fact no one is speaking for God. Joseph quickly realized this whenever followers began to express communications or experiences with the divine that were contradictory to what he had taught or received himself. A hierarchical schema was established that made it clear that only one person on earth at a time could speak on behalf of God, and at that moment that person was Joseph Smith, the Mormon prophet. Therefore, voice is not just one aspect of determining godly appointment or divine mandate—it is the *principal* means of understanding another person’s righteousness and devotion to religious principles. For this reason, I describe Mormonism as a theology of voice.

Today, the “voice of my servants” is taken to mean the prophets and apostles who constitute the hierarchy of the Mormon Church. In other words, God comes into being the moment a *particular* man voices him. God’s revelation to Joseph therefore gives unilateral power not only for divinely-elected men to speak on behalf of God by literally voicing God, but also suggests a listening technique required to hear God’s voice whenever a prophet opens his mouth. A popular Mormon hymn sums this up tidily: “Come, listen to a prophet’s voice, /And hear the word of God.” Furthermore, ethnomusicologist Peter McMurray has recently argued that the God in The Book of Mormon sometimes will “take verbal cues from prophets, reciting or re-uttering those prophets’ words himself,” which suggests The Book of Mormon-style interactions with God closely resemble Bakhtin’s notion of dialogism, and that, curiously, God is as much a mimic of his servants as his

servants are of Him.²⁴ At any rate, in Mormonism God permits—even commands—a practice of vocal vicarity wherein speakers may speak for God, God may speak for them, and listeners attune ears to God’s voice, even when the body of God is nowhere to be seen.

The same question of plausibility that besets all practices of vocal vicarity is no less a condition with God’s voice. If one man has the power to speak on behalf of God (or inversely, that God has the limited power to speak through only one man), but that man says thousands of words a day that seem unrelated to anything prophetic, how does the listener decipher between words spoken by a man and those spoken by God through that man? Different religions address this dilemma differently. Charismatic Christians, for example, maintain that the Holy Spirit speaks through humans during moments of ecstasy (what Durkheim calls collective effervescence). Mormons do not believe it is possible for the prophet to lead them astray, lest the entire plan of redemption be frustrated, but they also don’t hold their leaders to be infallible. To preserve this paradox, Mormons have constructed a very loose and almost always disagreed upon structure for determining when a prophet is speaking for God and when he is not. Similar to the papal privilege of speaking *ex cathedra* (literally, “from the chair”), where the infallibility and authority of the pope’s decree is bound by the nature of the religious office he holds, Mormons believe that when the prophet speaks “as a prophet” it is in fact the word and voice of God. Therefore, when a prophet speaks a certain way—and says things that seem more or less in line with what has been stated by previous prophets and sustained by particular scriptures, and in a manner understood to be prophetic—he is in effect speaking “as a prophet.” There are no hard and fast rules here for when

the prophet speaks as a man and when he speaks on behalf of God. The verse “by their fruits shall ye know them” seems as much a guiding principle as anything else.²⁵

With divine revelation, of course, we are dealing with something understood as patently different from normal communication between two humans. Nonetheless, as with any vicarious voice, a person does speak on behalf of another, so regardless of the fact of divine pronouncement from God’s lips to the prophet’s ear, that prophet must still communicate the message as one human to another human. It is this second message that raises issues of credibility and cleaves a division between reason and revelation famously argued in Immanuel Kant’s *Critique of Pure Reason*. To place an even finer point, George Steiner’s statement that “any model of communication is at the same time a model of trans-lation, of a vertical or horizontal transfer of significance” haunts any belief that revelation once communicated outward retains all (or any) of its original meaning.²⁶

In *Revelation in Religious Belief*, philosopher George Mavrodes offers a different communicative model. He entertains the objection that just because God may reveal a piece of information to someone doesn’t preclude the fact that the same information once communicated by the receiver to another person becomes a different kind of communication altogether. To put it another way, he has faith that a message from God can be delivered vicariously from one human to another.

Assume that God has revealed a certain proposition, *p*. And now someone makes the claim (a true claim, given our assumption) that God revealed *p*. That claim is also a proposition—call it *q*—and it is a proposition distinct from *p*. It is a proposition about *p*, perhaps about how *p* came into human intellectual life, or about how someone came to

²⁵ Matthew 7:20.

know that p , or something of the sort. And the objector goes on to assert that it is not possible that a proposition such as q should ever be proved as a piece of natural knowledge. If q —the claim that p was revealed—is to be known at all, then q must itself be revealed just as p was.²⁷

Mavrodes is not convinced that the inability of proposition q to be proven or known the same as proposition p makes it unreasonable that those propositions may be true. It also doesn't rule out the possibility that q could be "acquired as natural knowledge" (e.g., a medical researcher proving the healing powers of a certain herbal concoction professed by mystics for centuries). Instead, he goes against Kant's judgment that the relationship between reason and revelation is cleaved by arguing that "the categories of reason and revelation . . . do not seem to be mutually exclusive. That is, there appear to be cases (or, again, possible cases) of religious belief or knowledge that depend both on revelation and on reason, and in which neither element is dispensable."²⁸

While Mavrodes is skeptical that people can hear God's voice in a literal sense, he does suggest that God may communicate with humans through one of three ways: 1) the causation model, wherein God inserts ideas into the mind of a human, perhaps unknowingly; 2) the manifestation model, as when heavenly beings appear or make themselves visible (and possibly audible) to humans; and 3) the communication model, which is perhaps the most understood and expected mode of revelation where God communicates to humans in some fashion.

Applying Mavrodes's taxonomy to Mormonism, we might say that God speaks to Mormons atypically through the manifestation model (e.g., Joseph's First Vision) and typically through the communication model. We might also say that Mormon prophets likewise speak through the communication model when they speak on behalf of and with the voice of God. The revelatory

paradox Mavrodes describes above, with the whole notion of revelation being built upon a series of improvable propositions that nonetheless aren't in themselves proof of faulty reason, isn't a paradox at all in Mormonism. On the contrary, Mormonism extended the communication model indefinitely when God insisted that prophets could and would speak on his behalf. The message spoken by God and the message that "God has spoken" may conventionally be understood as separate propositions. In Mormonism, however, they are one and the same.

Mormons and Musicals

At heart, this is a story about how Mormons came to be associated with the American musical and what that association demonstrates about vocal vicarity. This dissertation takes as its premise that the story of Mormon acculturation and identity may be understood anew by looking at Mormonism askance—by “hanging up looking glasses at odd corners,” to use Virginia Woolf’s phrase—through the lens of musical theater.²⁹ This project is thus a reimagining, equally, of Mormon history and of the history of the American musical, how these reimagined histories speak, and what they speak to. I use theories and principles of the burgeoning field of Voice Studies to thread together what may at times seem unruly disciplinary partners. To that end, the dissertation places Mormon Studies, Musical Theater Studies, and Voice Studies into conversation—a disciplinary combination never before attempted, but I believe one with considerable promise. The seemingly strange combination of disciplinary methods and theories required to tell this story are a testament to the seriously knotted and entangled histories that make up the cultural fabric of both Mormonism and American musical theater.

Indeed, it seems to me that unpacking the phenomenological aspects of the vicarious voice is the best way to come to understand the Mormon fascination with American musical theater. I focus on Mormons here both for the perversity of the religion as well as its peculiarity. Certainly other religious movements have maintained some relationship with musical theater; growing up in the Bible Belt of the American Midwest, I was surrounded by Christian denominations of all stripes, almost all of which frequently performed musicals within the church building. Mormonism is thus not exceptional for its connections with musical theater, but I argue it is exemplary. The proximity of Mormons to musical theater has been popularly epitomized through satirical productions from the early twentieth century on; even more prominent and interesting, though, are the ways Mormons themselves have created an American identity *through* and *as* musical theater.

I have experienced firsthand this cultural fascination Mormons have with musicals. I joined the Mormon Church as an adult and over time became aware of a prominent aesthetic for musical theater conventions within Mormonism. This aesthetic is revealed in two ways. First, through the many musicals or musical dramas Church members create and perform for one another—i.e., musical pageants, rock musicals, road shows, historical enactments dramatized to music, and so forth. Mormons also have a second, subtler aesthetic connection to musicals, however, that has nonetheless made an association between the genre and the faith an easy one. *Book of Mormon* creators Trey Parker and Matt Stone in an interview with Terri Gross in 2011 explained this association:

To us there's so many things about Mormonism, even the way [Mormons] present themselves, when you go to Salt Lake City, the temple, when you go to some of their things, they present themselves in a very kind of Disney kind of way.

And we would have this running theme. We would always say when we're working on either the sets or the costumes or whatever, we'd say: No, make it more Rodgers and

Hammerstein. Or make it more Disney. Or make it more Mormon. And they're like: Well, which one is it? And we're like: No, it's all the same word for the same thing.³⁰

Their words speak to the larger issue this dissertation addresses. As I argue throughout, to be Mormon is to be a performer who is self-conscious of his theatricality. Characters in musicals often behave this same way. Indeed, what is known as the Camp sensibility—a self-reflexive, overt style of performance characterized, as Susan Sontag put it, by “its love of the unnatural: of artifice and exaggeration”—pervades both musicals and Mormon identity.³¹ Therefore, Mormons, Disney, and Golden Age musicals can be easily imagined as “all the same word for the same thing” because, in action, both Mormons and musicals are campy in this precise way. They appear to speak the same language.

That Mormons speak the same language as musical theater underlines my observation that Mormons practice a theology of voice. In fact, my argument is that Mormonism's fascination with musical theater emerges from two related impulses foundational to Mormon theology: the necessity of performance and the immediacy of vocal mimicry. On the one hand, I argue that Mormons find deep theological meaning in theatrical expression. Indeed, Mormon piety truly depends on repeated acts of theatrics. The Mormon temple ceremony, for example, has been described as “a staged representation of the step-by-step ascent into the presence of the Eternal while we are yet alive.”³² Central to this ceremony is the acting out of a character. Those entering the ceremony for the first

time are given a secret name whereby they will be known in heaven. Those who engage the ceremony again are given the name of a deceased person, who will experience the didacticism vicariously. The action of the ceremony centers on the creation story, wherein all men act as though they are Adam and all women act as though they are Eve. Thus Mormons engaged in temple worship are doubly veiled as both the deceased person whose name they carry and either Adam or Eve, whose actions they follow. Even the language of the theater frames a lot of Mormon activity. Therefore, faithful Mormons “perform” baptisms for dead ancestors, play a role as bishop or Cub Scout den mother, and are criticized by heterodox members for passively treating Church-produced lesson manuals as “scripts.” In significant ways, a faithful Mormon is always-already a performing Mormon.

On the other hand, Mormons have a unique relationship with vocality, which I theorize throughout this dissertation as a theology of voice. I understand voice to be material in effect and essence. The emanating sound waves of my spoken words produce a physiological effect on my body the moment I speak them, just as those traveling waves produce material changes in the ear and instantaneously the mind of whoever hears my voice. I consequently examine the Mormon voice as a kind of spiritually-infused object, like the posters, relics, and small figurines that Colleen McDannell calls “material Christianity,” with the purpose of seeing “how the faithful perpetuate their religion day in and day out.”³³

Re-placing Musical Theater

Conversely, musical theater historiography stands to be reimagined when Mormonism is introduced as a serious and important part of musical theater history. Musicological studies of the

American musical have helpfully considered how religious ideologies shaped the genre's musical style, theatrical conventions, and dramatic content. I agree with Ian Bradley, for example, when he argues that the musical "has a significant theological content and spiritual dimension and provides for many people an experience which can genuinely be described as religious as well as entertaining."³⁴ Bradley's less universalist, but no less provocative, assertion is that Tim Rice and Andrew Lloyd Webber "have arguably done more than most priests and preachers in the last thirty-five years to promote biblical knowledge and theological awareness."³⁵ Robin Sylvan makes a similar claim about popular music and spirituality when he writes that "for teenagers and young adults especially, the musical subculture to which they belong provides as all-encompassing an orientation to the world as any traditional religion."³⁶ Others continue: Raymond Knapp writes about religious overtones (and undertones) in *Mary Poppins* (1964), David Stowe looks to the evangelical influence on rock musicals, and Andrea Most's work, as noted, frames the American musical as a space for Jewish assimilation.³⁷

Yet for all the richness these and other scholars have offered in their discussions of religious subtext within musical theater, so far not much attention has been given to ways musicals likewise shape religious ideology. Mormons transitioned from a nineteenth-century outlier sect literally on the fringes of the country to become today representative Americans, and they did this in part

through an appropriation of musical theater. Musical theater's position as mediator of such a remarkable evolution grants an important and largely neglected perspective on the power of the American musical that the Mormon example helps make clear.

Finally, because most of the musicals discussed in this dissertation are either now forgotten or have only ever had a very small audience, I am making a claim about the assumption within musical theater historiography that the Broadway musical is the primary (if not only) representative of American musical theater. For many people, musical theater and Broadway are one and the same. In contrast to opera, where the Metropolitan Opera House may be a zenith but is still just one of many opera houses where new productions are vetted, New York City is seemingly the only place where musicals can "happen." Times Square teems with tourists who look to a Broadway musical for an authentic New York experience. There are a finite number of theaters in New York City, however, and some of them may be occupied for decades with ongoing runs of megamusicals such as *Phantom of the Opera* (1988-present), *Cats* (1982-2000), or *Les Miserables* (1987-2003, 2014-present). Shows used to close when the local audience ran out. Not so anymore, since the local audience is no longer the target, nor even the lion's share of theatergoers. A hit Broadway musical will stick around for as long as it is generating a profit. And with franchise tours simultaneously crisscrossing the planet (national tours, West End, separate casts in year- or two-year-long runs in cities like Chicago or San Francisco, enormous and costly Southeast Asian cruise ships or resorts, etc.), Broadway producers have little reason to rush their show's moneymaking potential, even if their success is at the expense of the genre's growth and maturity.

Arguably, this situation has been a catalyst for decentering the development of musicals away from Broadway. Because the turnover in theater space is so low and vacancies rare, and because those spaces once vacant are expected to be populated with shows that will earn investors just as much as the previous tenant, few options for newer or daring shows are ever made available.

Unsurprisingly, films-turned-musicals such as *Shrek* (2008), elaborate spectacles such as *Spider-Man: Turn Off the Dark* (2011) or *Rocky the Musical* (2012), or, more often, revivals of the now deified “Golden Age” musicals such as *The King and I* (1951) are a safer bet for investors. This has left the genre in something of a silent crisis. On the surface, the industry is doing fine, selling tickets and making money hand over fist. Yet economic constraints of Broadway have crimped the development of the American musical and a slow-creeping stagnation has quietly slipped in.

But this is *a* reality of musical theater, not the only one, and in some sense the focus on Broadway has simply amplified long-standing realities about musicals in America. If the history of the American musical is divorced from its New York locale, a very different story emerges. I say New York rather than merely Broadway because the city’s other conventional spaces for supposedly innovative works of theater—the mythical Off- and Off-Off-Broadway—are still defined by trends in Times Square. The result is that only a narrow set of aesthetic ideals and conventions define what is typically considered the American musical; shows that either don’t feature that narrow band of genre traits or that don’t fit within a preferred evolution of those characteristics are ignored in histories of the musical. To avoid such limited understandings, the history of the American musical might be more accurately and charitably written if it situates Broadway as but one of several regional and local venues where Americans use a wide variety of musical and dramatic conventions to help make sense of their historical place.

Some scholars have attempted to turn attention away from large urban centers as the only sites where theater matters; consequently, their work also frustrates the hierarchy of importance that displaces non-professional theatrical productions. Chapters by Jennifer Chapman (“Knowing Your Audience”) and Chase A. Bringardner (“The Politics of Region and Nation in American Musicals”), both in the *Oxford Handbook of the American Musical*, explore receptions of amateur theater productions (like those done by high schools or community organizations) around the country, and

also regional variances and interests in region-specific musicals like *Oklahoma!*, *The Music Man*, or *The Best Little Whorehouse in Texas*. Bringardner in particular puts a fine point on the absence of regional concerns in musical theater scholarship when he writes that, “Musical theater histories tend toward an unreflecting and often unconscious focus on Broadway, neglecting national tours and alternative centers of musical theater production. Such histories, as well as those that ignore region altogether, underestimate the potential benefits of analyzing a musical and its production history from the perspective of region.”³⁸ Stacy Wolf’s dissertation, “Theatre as Social Practice: Local Ethnographies of Audience Reception,” also attempts to de-center New York as the only theatrical stronghold. She examines a series of theater performances in Madison, Wisconsin, ranging from community to professional theater, insisting that “theatre-going is a profoundly local activity, circumscribed by local figures, local events, and local gossip.”³⁹ In a forthcoming article in *American Music*, I too examine how the musical theater industry has displaced not only local performers, but also especially aging ones, in Oklahoma City.⁴⁰

Mostly, though, musical theater scholarship has maintained some association between musicals and New York City. Indeed, many scholars have considered the geography of musicals almost entirely in relation to other interpretive cross-sections of the American musical, such as socially constructed identities or ideologies. I have already mentioned Andrea Most’s (2004, 2013) work on Jewish identity and musical theater, which serves in many ways as a model for this project.

By focusing on musicals from the 1920s through the 1950s (roughly corresponding to the second flowering of American operetta through the early years of the American musical's "Golden Age"), she takes a sideways glance at the American musical from the perspective of religious ideology and identity that, in the diasporic trends of New York's Jewish artists and audiences, nonetheless authenticates New York City as the place where musicals matter most. Raymond Knapp's (2004, 2006) two-volume history of the American musical contextualizes the musical from two vantage points, those of personal identity formation and national identity formation. Knapp dedicates a good deal of space in his second volume to the phenomenon of the film musical, which in a sense displaces New York City by its Hollywood credentials and broad production reach into middle America, for instance. Yet the film musical, despite its popularity and importance in building audiences in places far removed from Manhattan, is rarely discussed for its influence on appetites for regional theater or touring companies. Elizabeth Wollman (2006) includes with her study of rock musicals a discussion of the three realms of American musical theater in New York City—Broadway, Off-Broadway, and Off-Off-Broadway—as traditionally studied separately though they are “in fact interconnected entities.”⁴¹ Although her study maintains focus on New York City as place for musical theater, it loosens the grip on Broadway as an economic and aesthetic powerhouse for the entire genre. Finally, Wollman (2002) also has taken an interest, as have I elsewhere (2016), in how the renovations of Times Square have shaped audience demographics, musical styles, and even the vocalicity of the Broadway musical.⁴² These several more recent publications consider the

American musical as inseparable from New York City and, though none do so explicitly, nonetheless help further the impression that Broadway is the epitome of musical theater—all other expressions of the genre are either a slow march toward Broadway or else are viewed with suspicion, scrutiny, or are ignored altogether.

This is all to say that this dissertation is framed by the American musical, but largely does so by maintaining some distance from Broadway. Rather than framing Broadway, yet again, as the pinnacle of the genre's maturity, and thereby ignoring a tremendous variety of shows performed elsewhere, I foreground musicals largely unknown to the rest of the Broadway community to implicitly argue that, while the Broadway musical has no doubt influenced dramatic traditions elsewhere, it nonetheless does not have the market cornered on what a musical is, how it works, or what it means to audiences.

American Icons

There is something poetic about a union of the quintessential American faith and a genre that seems defiantly American. In fact, both Mormonism and the American musical were formed under similar circumstances with similar intentions. Mormonism was born in 1830 when Joseph Smith and a small gathering of family and devoted friends met to organize what was then called the Church of Christ in Fayette, New York, a small township settled among the finger lakes of upstate New York. In the years leading up to that moment, Joseph had a series of remarkable experiences with divine beings, chiefly a visitation from God and Jesus Christ while Joseph was fourteen years old. In what came to be known as “The First Vision,” Joseph was instructed by God and Jesus

Musical, from Hair to Hedwig (Ann Arbor: University of Michigan Press, 2006) and “The Economic Development of the ‘New’ Times Square and Its Impact on the Broadway Musical,” *American Music* 20(4) (Winter 2002); and Jake Johnson, “Building the Broadway Voice,” *Oxford Handbook of Voice Studies*, edited by Nina Sue Eidsheim and Katherine Meizel (New York: Oxford University Press, forthcoming).

Christ to find and translate a hidden record from ancient American civilizations and to organize a new Church in preparation for Jesus' hastening return to the earth. Joseph published *The Book of Mormon* in March 1830 and one month later he gathered in Fayette to officially organize the Church.

The great conviction of Joseph's Mormonism was that "all truth may be circumscribed into one great whole." Truth, in other words, not only stems from the same source but, through the power of God, can also be grafted back to that original wholeness. "If [Mormonism] does not circumscribe every thing that is in heaven and on earth," added Joseph's successor, Brigham Young, "it is not what it purports to be."⁴³ Joseph believed that remnant truth given by God to Adam and Eve lingered in distilled form throughout the earth, embedded in the variety of human belief systems. Mormonism was to be a great synthesizer of God's word, pulling those loose threads of truth back into a single tapestry of what followers today continue to call the "fullness of the gospel." This is not an incontestable process of cultural absorption, nor is it entirely passive either. As might be imagined, a synthesis of truth from the world's religions carries a great deal of ideologies that cannot be easily reconciled. As a result, Mormonism maintains a steady tension of spiritual and temporal paradoxes. Rather than finding this a liability, Mormons see a paradox of competing truths as a gift, in that a paradox betrays any sense of false comfort and demands a constant turning of one's mind in search of a solution. These paradoxes even define the faith and, as I will explore in this dissertation, are what make Mormonism a theatrically rich religion.

The American musical has roots similar to those of Mormonism, and the intertwining of the two organizations over almost two centuries makes for a rich study of American propriety. As with Mormonism, the American musical is a melding of several dynamic and somewhat distinct strains of

musical and theatrical conventions. Operetta, vaudeville, burlesque, and minstrelsy all play a role in the development and codification of the American musical. Operetta dates back to the early nineteenth century and is a genre perhaps best known from the works of Jacques Offenbach in Paris, W.S. Gilbert and Arthur Sullivan in London, and a host of composers centered around Vienna, including especially Johann Strauss II and Franz Lehár. America became crazed with operetta in 1879 with the New York premiere of Gilbert and Sullivan's *Pirates of Penzance*. Operetta subsequently proved its attractiveness as a comedic form and showed its ability to reach audiences far removed from the urban centers of industrial America—parodies of Offenbach's *Barbe-bleue* (1870) make their way into Utah by the late nineteenth century, for example (see Chapter 2). Similarly, the exotic and erotic invocations of polygamous Mormonism made for easy shenanigans on both American and London stages. But long before Gilbert and Sullivan redirected the development of American musical theater, a distinctive American form of musical theater had already taken root.

By 1830, in the same year Joseph Smith organized the Mormon Church, white performer Thomas Rice codified the white appropriation of black vernacular speech and dance in his minstrel character Jim Crow. With Rice's "Jumping Jim Crow," minstrelsy reached a commercial threshold in American popular culture. Like Joseph, Rice and many other white minstrel performers were from cities in upstate New York, such as Rochester, Utica, and Troy. The Jacksonian era had produced men like Joseph and Thomas Rice, men who "sought social order through unquestioned authority and centralized control."⁴⁴ Alexander Saxton argues that blackface minstrelsy was also a reflection of Jacksonian ideology, writing that "the rise of the first mass party in America and the dominance of the minstrel show as mass entertainment appear to have been interrelated and mutually reinforcing

sequences.”⁴⁵ Minstrelsy finally dissipated in the mid-twentieth century, but only in form, not function. The ideology that promotes theatrical self-fashioning and promiscuous appropriation of marginalized communities survives as the primary thrust behind both Mormonism and musical comedy today.

Operetta and minstrelsy coalesced with other theatrical traditions during the late nineteenth and early twentieth centuries. The American musical slowly transformed from a mishmash of conventions and styles to the standardized productions Richard Rodgers and Oscar Hammerstein II popularized in the mid-twentieth century. Indeed, most historical narratives point to the premiere of Rodgers and Hammerstein’s *Oklahoma!* in 1943 as when the book musical, or “integrated” musical, was born. *Oklahoma!* signifies the beginning of the principal musical theater convention that songs and dance should contribute to, rather than being ancillary aspects of, the show—hence the phrase “integrated musical.” By 1943, the Mormon Church too was looking for integration, albeit for quite different ends. Chapter 2 goes into greater detail on how *Oklahoma!* became not only a codifier of musical theater conventions but also an opportunity for Mormons to gain American acceptance by modeling these newly established conventions of the musical genre. Mormonism and the American musical thus share a historical trajectory that begins with the self-fashioning of Jacksonian ideology and reaches a culmination around the Second World War. At that point, both the religion and the genre enter a “golden age” against which all subsequent patterns of evolution are compared.

At root, then, musical theater and Mormonism share a common American heritage, a common ideology stemming from Jacksonian democratic principles, and even a common identity as an amalgam of American sensibilities and conventions. More than any geographic mooring to America, it may be the process of synthesizing multiple ideas and putting them to use in a new way

⁴⁵ Alexander Saxton, “Blackface Minstrelsy and Jacksonian Ideology,” *American Quarterly* 27(1) (March 1975): 4.

that makes Mormonism and musical theater quintessentially American. To put a finer point on the matter, the principle of self-fashioning seems to be underlying all impulses behind Mormonism and musical theater. In addition, while speaking on behalf of others is certainly not exclusively an American sensibility, it may well be that, paradoxically, American forms of democracy depend on the process of speaking vicariously for another person or persons. The Jacksonian era saw large-scale efforts to broaden the realm of voters but did so through mass political parties that speak as a committee rather than through any sense of ventriloquizing the voices of the everyday voter. After all, elected officials by definition speak for and on behalf of a constituency, an ideological gamble that mediates individual voice in the practice of sovereignty.

The Jacksonian ideology certainly pervaded many corners of social and cultural life in the mid-nineteenth century, new religions not excluded. Recall Joseph's revelation that God and God's servants speak with the same voice. This seemingly democratic gesture does not grant just anyone the ability to speak on behalf of God, however, but only an elite class of (male) prophets and apostles. Thus Mormonism from its earliest moments encapsulates the practice of vocal vicarity necessary for Jackson's vision of American democratic practices to function. Out of the crucible of the Jackson administration were formed all three components of American life central to this story: American musical theater, American democratic principles of vocality, and the religion that so readily captures American ideologies and practices—Mormonism.

Chapter Breakdown

One of the purposes of this study is to track the evolution of musical theater as it pertains to Mormonism. Therefore, this dissertation follows a loose chronology that begins in the nineteenth century and extends to today. My historiographic model for the dissertation is a particular type of pedagogy used in some American medical training, in which information is presented cyclically, and

additively, rather than in modules. I call this a spiraling historiographical model. For example, medical students learn some aspects of the heart during a lesson primarily about psychiatry and then build their knowledge of the heart during another lesson on respiration, and so forth. Thus, information “spirals” upward in complexity or downward in generality according to the primary thrust of the intended lesson. One major benefit to this pedagogical model is that the body is analyzed holistically, emphasizing for students how various physiological strata must be observed as associative rather than restrictive.

Similarly, I construct here a spiraling historiographic model that acknowledges the deeply entwined nature of historical phenomena while also offering readers more straightforward case studies. One effect is that certain characters in the story are only partly fleshed out in each individual chapter, but are given a more holistic construction when chapters are read as a group. I frequently return to the three main characters in this story—Mormon prophets Joseph Smith, Brigham Young, and Wilford Woodruff—but under varying historical or theoretical lenses in each viewing, hoping to communicate the shifting identity each man has taken as Mormonism reshaped itself through musical theater to adapt better to a changing American social landscape. That said, this dissertation is not a biographical project, and I do not attempt nor claim to be making new inroads for understanding these men in their historical moments (though such revelations may indeed come about). Rather, I hope to perform through the spiraling narrative the very way Mormonism has moved through the history of America, along the way adding other rings of complexity to the ongoing construction of historical narratives in Mormon studies, performance studies, musicology, anthropology, and other disciplinary communities, especially those connected with musical theater.

In Chapter 1: “‘Come Listen to a Prophet’s Voice and Hear the Word of God’: Vocality and Mormon Theatricality,” I introduce vocality and theatricality as dual impulses motivating Mormon theology and argue that these two together help explain the Mormon penchant for musical theater. I

demonstrate this by using two prominent Mormon examples of vocal theatricality, Brigham Young's transfiguration into Joseph Smith in 1844 and the story of Nephi's impersonation of Laban in the opening chapters of *The Book of Mormon*. I extend my analysis of these two moments in Mormonism to a broader theorization of voice in the Mormon church. As I explain, Mormon scripture designates the voice of the prophets to be literally the same as God's, which sets up the possibility for humans to model God in all things. Thus, through impersonation and theatricality, Mormons can move closer to godliness.

In Chapter 2: "I Sing That We're Going That Way": *Promised Valley*, Integration, and the Singing Voice," I track the development of American operetta in the nineteenth century and offer the first written exploration of anti-Mormon sentiment in this early form of the musical theater genre. I then show how musical theater conventions became codified with *Oklahoma!* in 1943, and explain that the postwar Mormon Church modeled their musical *Promised Valley* (1947) after *Oklahoma!* in order to make the remarkable transition from vilified fringe sect to become what Harold Bloom called "the American religion." The trope of singing permeates *Promised Valley*, and indeed in this musical, to sing means to belong. I examine this theme closely throughout the musical and suggest that *Promised Valley* captures both the Mormon insistence on communal labor (as signified by songs about choir practice, for example) but also the Mormon bargaining of identity in favor of assimilation (where Mormons show their industriousness but also their cultural malleability). I conclude by arguing that *Promised Valley's* insistence on singing as a metaphor for characters to claim a space in the larger community reflects the Mormon Church's ideal of vocality as a means of assimilating into mainstream American consciousness.

In Chapter 3: "Exoticized Voices, Racialized Bodies: Lineage and Whiteness on Stage," I suggest that Mormon fascination with *Fiddler on the Roof* (1964) points to the unique relationship between Mormons and Jews. I argue that, with its themes of tradition, cultural adaptation, and

religious persecution, *Fiddler* is the most “Mormon” of all musicals. I augment this claim by analyzing the Mormon musical *Life More Sweet Than Bitter* (1977) and the evening musical performed daily at the Mormon Church-owned Polynesian Cultural Center in Hawai‘i. *Life More Sweet Than Bitter* in many ways constructs a Mormon sequel to *Fiddler on the Roof* in which the main character moves to America, converts from Judaism to Mormonism, and opens a successful chain of grocery stores in Salt Lake City. Likewise, within Mormon cosmology, Polynesians, like Native Americans, are considered to be from the House of Israel, and their performance of musical theater aligns those racialized bodies with Mormon ideals of whiteness. I conclude by arguing these musical dramas express a cultural appropriation of Judaism that reflects the Mormon belief that Jews are Gentiles and Mormons are Jews. In effect, then, Mormons begin using musicals to explain and sustain a complex heritage which, of course, Jews also had been doing with musical theater since the nineteenth century.

In Chapter 4: “‘I’ve Heard That Voice Before’: Reprising the Voice in Sacred Time,” I examine vocality in the iconic Mormon rock musical *Saturday’s Warrior* (1973), a show that suggests the voice is a stable identifier transcendent of time. *Saturday’s Warrior* extends the idea of voice as symbol of community and belonging to include eternal commitments and relationships identifiable principally through vocality—the only material witness to a pre-mortal life forgotten during mortality. Using *Saturday’s Warrior* as a lens into Mormon preoccupations with time and memory, I argue that the musical puts pressure on ideals of memory and forgetfulness that have come to characterize Mormonism since 1960. I contextualize *Saturday’s Warrior* by detailing the structural changes the Mormon Church underwent in the 1960s and ’70s, particularly the process of Correlation and its streamlining of the faith’s theology. I argue this Mormon musical inherently challenged the authority of modern Mormonism by injecting a form of folk doctrine into Mormon culture that continues to inform Mormon views of cosmology. Moreover, I return to the act of vocal

modeling discussed in the first chapter and argue that Correlation created an environment of unity and sameness that consequently reshaped how Mormons speak. Under Correlation, the Mormon voice becomes an emblem of exactness and a material demonstration of Mormon mastery and faithfulness.

In the fifth and final chapter, “Voice Interrupted: *Book of Mormon* and the Failed Voice of Correlated Mormonism,” I explore the role of aurality in contemporary Mormon political life. I look to the place of voice in modern Mormonism and argue that Mormon aurality during Proposition 8 in California led to satirical works of musical theater against the Church, including *Prop 8: The Musical* (2008) and *Book of Mormon: The Musical* (2011). I show how *Book of Mormon*, especially, uses musical theater conventions to recall actual Mormon theatricality. This is done by portraying Mormons as musical theater caricatures, further conflating the religion and its musical-theatrical practice.

Through the musical, gay performers are able to don a Mormon costume and cheery demeanor to perform a particularly queer version of Mormonism, where rigid orthodoxy gives way to empathy and adaptation. I theorize this by building from Levinas’s theories of communication ethics, where he argues interruptions, mishearings, and messages lost in translation ultimately create ethical communication models. Inasmuch as correlated Mormonism has standardized the voice of the prophet and made the message of Mormonism streamlined and unwavering, this model of communication makes the voice an extension of hegemonic control. *Book of Mormon*, in spite of its satirical gesturing toward Mormonism, opens up a space where the message of Mormonism can get interrupted, thus loosening the grip of the institution on the message it pronounces. With the voice of Mormonism thus proven interruptible, *Book of Mormon* makes the case for a Mormon theology that succeeds precisely because its message misses the mark, and not for its uniformity in type and delivery.

In a truly spiraling nature, this dissertation ends by arching back to the beginning and begins by way of conclusion. Such a form seems only fitting for discussing a religion that values eternal progression rather than stasis. As such, there is an innate dynamism within Mormonism, characteristically American in one sense of the word, but also characteristically non-religious (more precisely, non-*Western* religious) in another. Mormons see the end of the world as the beginning of another and yet another—“worlds without end”—which makes it an orphan among other religions in America, especially those with a strong eschatological vision. Still, I hold that Mormonism’s non-eschatological values are precisely what give the religion an optimistic character, defiantly American and endemically musical theater-like.

There is reason, as Émile Durkheim suggests, that religious life remains vibrant and refreshing. As a gesture of vocal vicarity, I will speak through Durkheim (or him through me?) to gesturally give him the last word.

Before all, it [religion] is a system of ideas with which the individuals represent to themselves the society of which they are members, and the obscure but intimate relations which they have with it. This is its primary function; and though metaphorical and symbolic, this representation is not unfaithful. Quite on the contrary, it translates everything essential in the relations which are to be explained: for it is an eternal truth that outside of us there exists something greater than us, with which we enter into communion.⁴⁶

Chapter 1

“Come Listen to a Prophet’s Voice, And Hear the Word of God”:

Vocality and Mormon Theatricality

“And whoso receiveth not my voice is not acquainted
with my voice, and is not of me.”

D&C 84:52

“So then faith cometh by hearing,
and hearing by the word of God.”

Romans 10:17

To speak vicariously is, in the first place, a theatrical gesture. It is a practice of taking on another identity and presenting it in the fashion of your own, as is commonplace in religious traditions like Pentecostalism that practice glossolalia, or speaking in tongues. Speaking in tongues was first recorded in the book of Acts during the effulgence of spiritual awakenings known as Pentecost. Theologically, the first-century Pentecost was the fulfillment of Babel’s linguistic estrangement, though vocally they are both instances of large-scale cacophony. Today, tongue speaking, as theologian Harvey Cox understood it, democratizes divine speech by providing people with all levels of linguistic ability “the sounds by which a stammering soul could speak to God.”¹

¹ Harvey Cox, *Fire From Heaven: The Rise of Pentecostal Spirituality and the Reshaping of Religion in the Twenty-first Century* (New York: Addison-Wesley Publishing Company, 1995), 87.

Tongue-speaking therefore qualifies as something of a remedy to the disabling narrative typical of divine encounters, as with Moses, Saul, or Joseph Smith.

Not unlike Mormons, evangelicals and charismatic Christians listen in these moments of collective effervescence for a particular quality of voice that signals the appearance of the Holy Spirit. This tongue-speaking is understood by practitioners to be patently individualistic, although as others have observed, the degree to which the cacophony of speaking in tongues begins to standardize into a singular, homophonic texture makes evident that at least some degree of social disciplining is at play. Inasmuch as these displays of glossolalia in such communities are normative and seem overtly theatrical, however, reducing to mere theatrics what is considered to be the manifestation of God would misrepresent the work such vocal phenomena are doing for these communities. Such vocal theatrics are like enchantments, drawing God to the listener through the conduit of a pious tongue-speaker. Both speaking in tongues and speaking on behalf of God, despite their theatrical nature, therefore are understood by practitioners to be an active means of reaching God—bending his ear toward them through extraordinary speech acts rather than listening in quiet meditation for God to speak of his own volition.

In this chapter I look to two examples in Mormon lore—one in the mid-nineteenth century and the second on the outskirts of ancient Jerusalem—where vocal vicarity is closely tied with elements of theatricality, and explore how these stories set a standard of vocal theatrics that continues to inform Mormon practice today. This chapter also lays the foundation for considering Mormonism as a theology of voice, and for understanding how as a genre musical theater most conveniently allows faithful Mormons to exercise piety in voice and theatricality.

Brigham Young's "Transfiguration"

In August of 1844, more than five thousand Mormons gathered in the sweltering heat along the banks of the Mississippi River to make what until a few months before seemed an unthinkable decision: who should be their next leader. Mormon founder and prophet Joseph Smith was violently murdered in June, along with his brother Hyrum, and because Joseph left no instructions for how to proceed in the event of his death, several individuals now publicly debated how to resolve what would eventually be known as the “succession crisis.” Most historical attention is given to a lively debate between two prominent leaders, Sidney Rigdon and Brigham Young. By law, Sidney Rigdon was poised to be Joseph’s legal successor. Rigdon had served as counselor to Joseph in the First Presidency—the highest council in the Church—and in the original incorporation document from 1841, Joseph states “I was elected Sole Trustee for said Church to hold my office during life (my successors to be the first Presidency of said Church).”² As a former Campbellite preacher, Rigdon had a formal education and possessed great rhetorical flair. Brigham Young, on the other hand, was one of the twelve apostles appointed by Joseph to lead the Church. Compared to Rigdon he had a more modest intellect, but Young had been a close companion to Joseph for several years and remained fiercely loyal to Joseph and the Church.

Yet the matter of succession seemed settled once and for all when Young stood to speak to the gathered crowd. Others had spoken before him, arguing for himself or advocating for the leadership of another, yet Young’s argument was steadier. No one person should lead the Mormons. No one could fill Joseph’s shoes. Rather, Young argued, all the keys and information necessary to continue the preparatory work were given by Joseph to the Twelve Apostles. Under their collective leadership, the Church could move forward.

² As quoted in Parley P. Pratt, *The Latter-Day Saints' Millennial Star*, Volume 18 (1856), 373. Following the apostasy of second counselor William Law in 1844 and Joseph’s death a few months later, Rigdon was the only surviving member of the First Presidency and therefore arguably the Church’s legal heir.

What happened next has been the source of great conflict, amusement, and wonder for 180 years. As Young spoke, some in the audience recalled hearing from Young the voice of Joseph Smith and seeing in him the visage of their slain prophet. For many of those gathered, this was a miraculous event, and a divine confirmation that Young's plan was in harmony with Joseph's intentions.

This "transfiguration," as it has since been known, serves many functions for Mormons today as it did to those Mormons in the mid-nineteenth century. For one, the transfiguration is a neat parallel to the dove-like descent of the Holy Ghost upon Jesus following his baptism in the river Jordan. Like the biblical account, where God's voice confirmed the action and divinity of Jesus through baptism ("Thou art my beloved Son; in thee I am well pleased"), Brigham Young's transfiguration provides a remarkable instance of voice serving as holy confirmation, indeed one of the most important testimonies in Mormonism to this day.³ According to witnesses, even the slightest particulars of Joseph's voice could be accounted for—the idiosyncratic cough he gave before beginning his sermons, the faint whistle in his speech caused by a chipped tooth during an assassination attempt in 1832.⁴ So while Young did appear to take on the physical characteristics of Joseph in those moments, what seems most prevalent in the historical record is the fact of voice.

This in itself isn't all that surprising. Hearing has a more persistent and haunting quality than our much more trusted, albeit frequently overindulged, sense of sight. Stephen Connor has made the argument that auditory "hallucinations" are much stickier, more apt to linger, and often nearly

³ Mark 1:11.

⁴ According to D. Michael Quinn's history of folk magic in Mormonism, Joseph's whistling speech would have been a sign of his astrological vocal identity. Quinn writes, "Persons such as Smith, born in the sign of Capricorn, were also expected by astrologists to be 'whistling in their delivery and speech, though otherwise quick and voluble enough.' As a result of a chipped tooth during a mob attack in 1832, Smith indeed 'had a slight whistle in his speech' throughout the last decade of his life." See *Early Mormonism and the Magic World View* (Salt Lake City: Signature Books, 1987), 64.

impossible to forget in comparison to things seen. He writes, “Because a voice is an event in time, something that happens to us, even happens on us, in a way that an object presented for sight is not, the experience of hearing something with one’s own ears is much more importunate and encroaching than seeing it with one’s eyes.”⁵ It is important, then, to examine the conditions behind earwitness accounts of such alarming transformations. Imbedded within the listener’s cochlea was a sonic memory of a miraculous event, one that I won’t attempt to explain *away*, but will explain *within* a context of nineteenth-century understandings of voice.

This story has some problems, namely that it likely didn’t happen, at least not the way it is commonly told. First, even though over 120 witnesses confirmed some version of a transfiguration in journals, diaries, or other personal recollections, none of those remembrances were contemporary. Most versions of the transfiguration story were recorded decades after Brigham Young led the company of Saints to modern-day Utah and had become their actual prophet-president.⁶ Yet in the convoluted annals of Mormon history, much depends on Brigham Young’s succession. Whether because of a miraculous transfiguration or not, most of the Mormons followed Young two years later when he led the first company of Mormons west across the Mississippi River and toward the Rocky Mountains. Thousands of others were not as convinced, however, and either stayed in Illinois waiting for a different leader or dissipated into various splinter groups. Because the efficacy of Young’s succession is not apparent beyond this miraculous transfiguration, with dozens of other competing factions laying claim to true Mormonism, there is a tremendous pressure on the

transfiguration narrative to prove the reality of *the* Mormon Church. Without it, the modern-day LDS Church is simply another version of the Mormon faith.

The second issue with the veracity of the transfiguration is Brigham Young's particular set of talents and interests. According to apostle Orson Hyde, Young was "a complete mimic, and [could] mimic anybody."⁷ Young was also a great supporter of the theater. Under his leadership, one of the first permanent buildings erected in Salt Lake City was a theater, and Young himself took to the stage as both impresario and actor. It seems possible, therefore, that even if the accounts are true—that witnesses indeed saw and heard Joseph when Young was speaking—what they saw and heard was a convincing recital by a gifted actor. Richard Van Wagoner sees things similarly: "The force of Young's commanding presence, his well-timed arrival at the morning meeting, and perhaps a bit of theatrical mimicry swayed the crowd, rather than a metaphysical transfiguration of his physical body."⁸ In a sense, Brigham Young *performed* Joseph the best—better than Rigdon or any other vying for the title—and through that performance rose to the position of God's anointed. A similar performance continues today among Young's successors and will be discussed below.

But first, these accounts should be understood within a particular framework of early Enlightenment reasoning. Early Mormon converts, like others at the time, shifted somewhat uneasily between a magical and rationalist world view. In the words of Gordon Woods, it was a time when "everything was believable, everything could be doubted."⁹ Newly endowed with the possibilities of reason, nineteenth-century Americans were skeptical of intellectual or authoritative

pronouncements, yet often failed to see the extent of their own gullibility and naive reasoning skills, and “could be easily impressed by what they did not understand.”¹⁰

It is out of this environment that acts of vocal duplicity, like mimicry or ventriloquism, begin to take on new meanings in American popular culture. In his history of ventriloquism, Steven Connor introduces the concept of the “vocalic body,” or the fact that the voice is produced by but also produces bodies, which may help connect the practice of ventriloquism to the seemingly metaphysical transfiguration of Brigham Young. Connor claims that the power of the vocalic body can actually reshape listener’s perception of the body out of which the voice emanates:

In fact, so strong is the embodying power of the voice, that this process occurs not only in the case of voices that seem separated from their obvious or natural sources, but also in voices, or patterned vocal inflections, or postures, that have a clearly identifiable source, but seem in various ways excessive to that source. This voice then conjures for itself a different kind of body; an imaginary body which may contradict, compete with, replace, or even reshape the actual, visible body of the speaker.¹¹

Connor’s vocalic body is the product of what I am calling the vicarious voice. The conjured body loses precedence to the resounding voice, however, even if the bodiless voice in a sense demands our attention and undoes notions of vocal authorship. Along those lines, the very existence of a vocalic body is a gesture of theatricality—a kind of competition between multiple realities confirmed, yet also confused, through physical bodies.

Mormons were not immune to this fascination with the theatrical voice. Joseph Smith’s life rather naturally fits within this narrative of theatricality. “Madly,” writes journalist Avi Steinberg,

¹⁰ Wood, “Evangelical America and Early Mormonism,” 369.

¹¹ Connor, *Dumbstruck*, 36.

“[Joseph] turned his whole life, every aspect of it, into high literature and literature into life, casting himself as the hero of a recklessly improvised live-action epic.”¹² Joseph could be easily carried away by the theatrical quality of his communion with God or Jesus Christ, John the Baptist, or Moses. Some found Joseph’s dramatic penchant unseemly for a prophet—“recklessly improvised”—and used Joseph’s theatricality against him. Early on, people associated Joseph’s vocal channeling of God with the duplicitous qualities of mimics. One anti-Mormon book written shortly after Joseph’s death lists the “pretended prophet Joe Smith” among other such “remarkable characters in the annals of religious imposture” such as mimics, a horse whisperer, and the famed “Lame Beggar of London”; the book even includes a written account of a would-be initiate describing the secret and abominable ceremonial rites of the Mormon temple ceremony.¹³ An illustration of the impostor Joseph dressed in elaborate costume and gesturing wildly in a theatrical manner, like a hysteric barker hocking his goods in the religious marketplace, accompanies the story.

More amazing is the story of Book of Mormon scribe Oliver Cowdery’s “confession”—later determined to be a hoax—that when Joseph baptized him in the Susquehanna River in 1829 and John the Baptist appeared to confer upon Joseph and Cowdery the Aaronic Priesthood, Cowdery heard from John the Baptist the voice of Sidney Rigdon.¹⁴ The account suggests that while his eyes were closed the hands of John the Baptist were laid upon his head and the voice conferring the

¹⁴ The Aaronic Priesthood, so named for Moses’ brother Aaron, is the first set of priesthood offices in Mormonism, preparatory to the Melchizedek Priesthood, as was held by Abraham’s ecclesiastical leader, Melchizedek. In ancient times, the Aaronic Priesthood attended to traditional priestly duties and were almost exclusively associated with the tribe of Levi. According to Joseph and Cowdery, John the Baptist—who was a descendent of the tribe of Levi—appeared to them both along the banks of the Susquehanna River and conferred the priesthood to Cowdery, who then gave it to Joseph. See Joseph Smith—History, 1:68-72.

Priesthood was that of Sidney Rigdon. Cowdery at this point had not met Rigdon, nor supposedly had Joseph (although one theory exists that Joseph and Rigdon conspired early on to concoct and write the stories in *The Book of Mormon*).¹⁵ Later, when he met Rigdon for the *first* time, Cowdery distinctly remembered his voice as being identical to the voice of John the Baptist. Unwavering in his convictions, Cowdery ventured the guess that perhaps Rigdon's role was to prepare the way of Joseph in the same manner as John the Baptist's was to prepare the way for Jesus; with hints of the reincarnate made possible by a proxy, the same voice matched the same divine responsibility.

This story was taken from the confession by Oliver Overstreet, the feigned Oliver Cowdery, but the confession itself was also a hoax. Known as "the Overstreet Letter," this story survives as an early example of fierce anti-Mormon propaganda and evidence of the intense turmoil and infighting that continued within Mormonism despite Brigham Young's impressive performance as Joseph Smith. As the story goes, a man named Oliver Overstreet was hired in 1848 by Mormon officials to impersonate Oliver Cowdery in order to preserve Cowdery's witness of *The Book of Mormon* (the real Cowdery had apostatized from the church several years earlier). Fake or not, Overstreet's confession reads like an endorsement of Mormon leadership's high appraisal for convincing impersonation:

I personated Oliver Cowdery at Council Bluffs, Iowa, on the 21st day of October, 1848 in a conference at which Bro. Orson Hyde presided [...]

The facts are these: Bro. R. Miller came to me with an offer from Bro. Brigham Young of \$500.00, cash in hand paid, to pose as Oliver Cowdery, the first of the 'three witnesses' to the *Book of Mormon*. [...]

¹⁵ E.D. Howe first put this theory forward in 1834. The Spalding-Rigdon theory suggests *The Book of Mormon* was plagiarized from an unpublished manuscript written by Solomon Spalding in the first decades of the nineteenth century. As the story goes, Rigdon stole the manuscript and worked with Joseph Smith and Oliver Cowdery to write *The Book of Mormon*.

He insisted that I resemble Cowdery so much in form and features, notwithstanding our differences in tone of voice that I could easily personate him without danger of being caught and exposed. [...]

To enable me to know what to say and do, Bro. Miller had me read some articles written by Cowdery and also gave me some voice drill, assuring me that he would make a verbatim [sic] record of my remarks, while personating Mr. Cowdery to be preserved for futur [sic] use under Bro. Brigham Young's direction; and that my part in the matter he was confident would never be known or suspected.¹⁶

While the story exists within a complex narrative of fraudulence, it survives for substantive reasons. Indeed, even though both Young's transfiguration and Cowdery's/Overstreet's confession are outside the bounds of historical veracity, these examples of impersonation and deception draw attention to a particular theological undercurrent within Mormonism that sustains vocal deception and vicarity as emblems of godliness. In fact, despite the familiarity and prominence of Joseph's First Vision for Mormons today, I would argue that the most important sonic miracle for Mormonism was not when Joseph conversed with God and Jesus in the grove of trees near his family farm, but rather the moment Joseph's voice was heard breaking forth out of the mouth of Brigham Young. It is in this instance where a theology of voice is first put to use by an aspiring leader, one heard and understood as a divine sign by the faithful, and that established vocal vicarity as a quality of all prophets and not just a peculiar ability of Joseph Smith.

The possibility for mimed voices or impersonation was not only a part of the nineteenth-century American milieu, it was also a distinct part of Mormon theology. Given the storied prominence of Young and Cowdery's remarkable examples of vocal mimicry, perhaps nineteenth-

century Mormons were willing to play along with impersonations and clever acts of deceit. People are never as good at masking their voices as they think they are, anyway. Jody Kreiman and Diana Sidtis write that “It is very difficult indeed to reproduce a voice so accurately that it is actually mistaken for the target, and true impersonation usually requires a credulous audience to succeed.”¹⁷ Since any act of vocal vicariness is also an act of duplicity, one’s ears can easily be fooled if not properly attuned to the qualities of a divine voice.

The Voice of Laban

If the possibility exists for a mimic Brigham Young, it stands all the more convincing because of another Mormon story of feigned identity and vocal impersonation: the story of Nephi and Laban in the opening pages of *The Book of Mormon*. *The Book of Mormon* begins in Jerusalem shortly before its destruction. A prophet named Lehi (a contemporary of Jeremiah) is warned by God to take his wife and family into the wilderness to flee persecution. This departure eventually lands the family on the American continent. Before they can make the trip overseas, however, Lehi instructs his sons Nephi, Laman, and Lemuel to go back into Jerusalem and obtain some scriptural and genealogical records held by Laban, the family’s ecclesiastical leader. Laban is apparently a wicked and greedy man. When Lehi’s most obedient and faithful son, Nephi, confronts Laban and offers payment of the family’s fortunes in exchange for the records, Laban greedily takes the money and tries to kill Nephi. The faithful son escapes, and later tries a second time to gain the records.

Now the story gets interesting. On this second visit to Laban, Nephi finds Laban drunk and passed out in an alley outside his home. In an exchange remarkable for its ethical vibrancy, God

¹⁷ Jody Kreiman and Diana Sidtis, *Foundations of Voice Studies: An Interdisciplinary Approach to Voice Production and Perception* (Hoboken, NJ: Wiley Blackwell, 2011), 247.

commands Nephi to take Laban's sword and kill him. Nephi obeys—he cuts off Laban's head, puts on Laban's clothes, and enters the house of Laban looking for the sacred records. Like Brigham Young, Nephi is apparently a brilliant actor and mimic, for he speaks “in the voice of Laban” and is costumed in his “garments and also the sword girded about [his] loins.”¹⁸ Nephi-as-Laban convinces Laban's servants to retrieve the sacred records, allowing Nephi to escape with them and thus preserve the records from destruction. Avi Steinberg asks the right question when he first reads of Laban's beheading: “The Hebrew Bible begins with the creation of heaven and earth; the New Testament begins with the mysterious birth of a boy god. What kind of bible starts off in a dark creepy alley, with a sleazy drunk guy and a gruesome murder/robbery?”¹⁹ There *is* something grizzly about a divinely endorsed beheading and mugging; the story is unsettling, no matter how it is sliced.

Although Nephi feels justified murdering Laban and then lying about his identity to rob his victim, his actions likely sit uneasily on the Mormon conscience. Perhaps the ends justify the means; without the sacred plates Laban is keeping for himself, Lehi and his sons feel they cannot proceed with God's directives. And, as we know from the Old Testament, Jerusalem is about to be destroyed and it is probable that Lehi and his family would not have survived the attacks had they not escaped when they did. Still, Nephi's duplicitous actions call for scrutiny. As the faithful hero of *The Book of Mormon*, Nephi is exemplary, obedient, loyal, and courageously willing to do what he is asked regardless of the personal costs. His theatrical guise adds insult to injury, yet pretending to be Laban is what allows him access to the sacred plates. One would think this story would make Mormons ambivalent toward theatricality, the way Andrea Most argues was the case for Jews who, with the story of Jacob and Esau, are also faced with a genesis story built around duping others. Disdain for the theater is not the case, however, for either group today. Jews and Mormons have instead both

¹⁹ Avi Steinberg, *The Lost Book of Mormon*, 19.

used the theater to assimilate into American ideologies and, especially with Jewish figures such as Richard Rodgers, Oscar Hammerstein II, Stephen Sondheim, and Leonard Bernstein, even create new American ideologies from the theater. If God has a hand in shepherding either group, it seems He is content on allowing theatricality to move things along.

Moral ambivalence aside, it seems significant that Nephi is instructed to kill Laban in the way that he does. Surely a less messy way exists for obtaining garments than decapitation. Yet to strike off the head—at the very point of vocal delivery—signifies the removal of authority, of the mouth that speaks for another, and is an action echoed throughout mythical and biblical stories. When it comes to mediating interior worlds with those without, the head is paramount. It contains not just the vocal mechanism but also the teeth, lips, tongue, palette, and mouth we use to engage the world with our voice. As Brandon LaBelle has written, “the mouth has already initiated a confrontation with the forces surrounding and penetrating us, leaving their deep impressions firmly upon the tongue and hence our psychological life.”²⁰ According to one legend, after Joseph was killed and his body had fallen from his jail cell in Carthage, Illinois, his attackers tried, but were thwarted by electrical shock, to cut off his head as a souvenir. In all cases the head, like LaBelle has argued for the mouth, “is unavoidable.”²¹

These two tales of impersonation and mimicry are foundational mythologies in Mormon lore. Both Young’s transfiguration and this moral of Nephi and Laban act as genesis stories for the Mormon faith, catalysts that shift the action of the story from one location to another: Illinois to the Great Salt Lake for one, Jerusalem to Central America for the other. Taken together,

though separated by thousands of years, these tales of mysterious theatrics and mimicry give the capacity of voicing someone else a unique position in Mormon lore.

Attuning the Ear to God

The power dependent upon voice in both stories confirms the etymological meaning of obedience, which comes from the Latin *audire* (to hear). Inherent in obedience is a kind of willful theatricality, and inherent in hearing is obedience. In the annals of heaven, kingdoms rise and fall on the merits of a listening ear. Therefore, it is through the attuned ear that God proves the faithful; the ears of the unfaithful or disobedient, by contrast, may easily be fooled by God's theatrically sophisticated elect. In exceptional instances, as with Brigham Young or Nephi, the ability to speak and hear on behalf of another person provide the means to miraculous ends. Yet even in

normative circumstances, Mormons practice a kind of vocal vicarity. This is how faithful Mormons fashion themselves as proxies for the dead in the Mormon temple ceremony, and how Mormon prophets came to speak with sameness the voice of God.

Mormonism, generally understood as deriving from a written source—The Book of Mormon—therefore may best be understood as a conceptual space where *vocality* orders the heavens and the everyday practices of the Church; a training ground for how to perform one’s place in eternity through vocal sound; in effect, a *theology of voice*. Such a theology is practiced in two ways in Mormonism. First, Mormonism’s roots are sonic and therefore all policies and dogma arguably emerge from the sound of the voice. Joseph’s experiences with angels, God, and other divine beings are grounded in conversation: he heard God call him by name, he dictated to scribes the *Book of Mormon* (which likewise refers to itself as a “voice speaking out of the dust”), and he instated a temple drama where speaking on behalf of the dead transforms everyday Mormons into “saviors on Mount Zion.”²² In his study of The Book of Mormon’s sonic qualities, Peter McMurray even suggests that The Book of Mormon be considered both in *medium* and *message* to be about sound.

The Book of Mormon contains numerous events in which sounds plays a crucial role in formulating, transmitting, and representing sacred knowledge and action. It frequently becomes a site of contestation between believers and non-believers. But perhaps most importantly, it functions as a key marker of divinity and an object of aspiration, as prophets and other believers aspire to attain a sonic existence more like that of God and his angels.²³

²³ Peter McMurray, “A Voice Crying from the Dust: The Book of Mormon as Sound,” *Dialogue: A Journal of Mormon Thought* 48(4) (Winter 2015): 10.

Fundamentally, then, Mormonism is the product of a certain kind of vocal vicarity, which will be rewarded in heaven. The Book of Mormon proclaims it, Joseph's life exemplified it, and Mormons today continue to practice it.

Mormons perform a theology of voice secondly by materializing long-lasting metaphors in Mormon scriptures where speaking and hearing a spiritual message are the primary measures of conversion to the gospel. Joseph boldly proclaimed that “no unhallowed hand can stop the work from progressing” until “it has penetrated every continent, visited every clime, swept every country, and *sounded in every ear*.”²⁴ Towers from which messages could be proclaimed are frequently erected and destroyed in The Book of Mormon. King Benjamin, a key character in The Book of Mormon, delivers a final message to his followers from atop such a tower, “that thereby his people might hear the words which he should speak unto them.”²⁵ In the early twentieth century, the Church adopted radio and television to spread its message—a practice some saw as an electronic extension of those ancient wooden towers. “What mighty towers has our Heavenly Father permitted us to have in this dispensation through the use of radio and television,” asked Fred C. Esplin. “Surely they are more powerful instruments beyond imagination, to help the gospel message ‘sound in every ear’ on this planet.”²⁶

Given these two dimensions for voice in Mormonism, it is unsurprising that Mormons have developed ways to practice their religion by drawing attention to the voice, even in the face of rather drastic policy changes over many years. Voice in imitation gives buoyancy to the faith, and performance on stage—whether ritualized in the everyday or in musicals—helps sacralize it.

Imitating God

Vocal performance, of course, involves not only the voice, but also a repertoire of gestures, physicalities, postures, and, most importantly, an intention to deceive. Deception need not always carry a negative connotation; many religious texts actually seem to promote it as a pious practice. In addition to Book of Mormon stories about disguise or mistaken identity, such as the Nephi and Laban account or the wandering and immortal Three Nephites, Mormon scriptures and the Bible are replete with instances of theatrics as apparent signs of divinity. As noted, Andrea Most has written about the ambivalence Jews have felt toward the theater since Jacob, namesake for the entire Hebrew nation, stole the birthright from his brother Esau because of a successful hoodwink.²⁷ The New Testament is no less cautious about duplicitous behavior. Paul warns against “false prophets, deceitful workers, transforming themselves into the apostles of Christ”; he places a fine point on the matter by adding that “Satan himself is transformed into an angel of light.”²⁸

Other scriptures send mixed messages on this topic, however. “Put on the whole armor of God,” Paul writes.²⁹ Even though clothing (costuming?) is part of his metaphor for righteousness, Paul’s association between a new identity and godly behavior sets a standard for imitation as an emblem of discipleship. For many ages, then, Christians have had concerns about modeling holy behavior. The uneasy relationship between pious Christian denominations and the theater, coincidentally, suggests religious imagery of imitation or duplicity are classified by religious practitioners as something different in kind, not degree, from what happens on a theatrical stage. In

this regard, Mormons set themselves apart since, as will be discussed in the next chapter, Mormon leaders have celebrated and encouraged theatricality since the religion's founding. Still, it seems that for the most part, religious imitation or modeling of God is understood as something patently different from the happenings of the theater.

Indeed, early Mormons found themselves caught within a web of imitative practices, including some that were not always welcome. The angry mob of local vigilantes, religious zealots, and disgruntled Mormons that charged Carthage Jail and murdered Joseph and Hyrum Smith, for example, were disguised in blackface. When confronted by the prospects of harassment by a reckless U.S. Federal Army—one scholar noted that tensions in the nineteenth century between the Church and federal government “resembled comic opera more than a political battle”—one band of Mormons dressed as Native Americans raided and killed a party of 120 men, women, and children passing through on the way to California.³⁰ Patrick Q. Mason details how, when Church leader Brigham H. Roberts was charged with retrieving the bodies of two missionaries murdered in Cane Creek, Tennessee, he disguised himself as a tramp before stealing away the bodies undetected—though not before posing for a picture in his tramp get-up (Figure 1.4).³¹ These were common happenings and reduced the gap between reality and the playacting in circumstances far removed from the footlights of a theater. Mormons were on the cusp of changing sensibilities in America, as minstrelsy and speaking on behalf of God became harder and harder to separate in practice.

In line with Paul's somewhat cautionary embrace of mimicry, religious thinkers have continued to imagine God's relationship with humans in theatrical terms. Augustine, for example, believed God communicated to humans through a form of mimicry. Because any manifestation of God to humans is contingent upon God having a material body—a belief today held almost exclusively by Mormons—Augustine understood theophany instead to be a divine theatrical act. For Augustine, God's dramatic presentation of Himself raised the stakes for who God is and who humans are in relation to Him. As John Durham Peters writes of Augustine, "If God appeared to appear, he was resorting to deception, donning a disguise to meet the crudity of human sense organs. Theophany is either deception (of humans) or debasement (of God)."³² In Augustine's

³² John Durham Peters, *Speaking Into the Air: A History of the Idea of Communication* (Chicago: The University of Chicago Press, 1999), 71.

words, “For as the sound which communicates the thought conceived in the silence of the mind is not the thought itself, so the form by which God, invisible in his own nature, became visible, was not God himself.”³³ What the prophets and apostles have come to know, fear, love, and worship is for Augustine just a mock-up, a Something-Else pretending to be what we have come to know as God.

In the fifteenth century, Thomas à Kempis first published *De Imitatione Christi*—*The Imitation of Christ*, in which he argued that internal modeling of Christ’s attitude, rather than a physical imitation of his life as measured by friars, is what is meant by becoming like God. “Whoever wishes to understand fully the words of Christ must try to pattern his whole life on that of Christ,” the book reads.³⁴ In the nineteenth century, Kierkegaard refocused Augustine’s notion of a God “incognito,” who lives out the principle that concealing one’s identity and purpose may be necessary to maintain purity. For Kierkegaard, disciples must confront Jesus as a deceiver, as part of a contradiction, justified because paradox is what can save us from the falsity of direct communication.

In the twentieth century, C.S. Lewis turned the tables on deception and encouraged believers to “pretend,” to “dress up as Christ” when praying. This is far from pretense for the sake of fooling yourself or another person, he argues. Rather, theatrics is an important means for followers to come closer to God and Jesus. Lewis writes,

Now, the moment you realize “Here I am, dressing up as Christ,” it is extremely likely that you will see at once some way in which at that very moment the pretense could be made less of a pretense and more of a reality. . . . You see what is happening. The Christ

Himself, the Son of God who is man (just like you) and God (just like His Father) is actually at your side and is already at that moment beginning to turn your pretense into a reality.³⁵

In this passage, Lewis argues for duplicity as a religious necessity, requisite to achieving the proper state of humility before approaching the divine. Tucked within this pretending is the notion of vicarity. Acting and praying on behalf of Jesus makes humans the agents of godly communication. This is how humans for millennia have been able to make God in their own image, a practice that continues today. In her book *When God Talks Back*, anthropologist Tanya Luhrmann discovers a direct application of Lewis's counsel in the attitudes of American evangelicals. She finds that in seeking an immediate and personal experience with God, evangelicals resort to play-acting in order to make an invisible and scripturally distant God seem closer and empathetic.³⁶ Thus evangelicals pretend to have coffee with God, go on lunch dates with God, and in general act as if the unseeable God is interested in and present for the ins and outs of their everyday lives.

This and the previous propositions are jarring: reality can be understood best when unrealistic measures are taken. These purposeful and respected guises don't belong solely within the domain of religion, however. Viktor Shlovsky in his infamous gem that Art exists "to make one feel things, to make the stone stony" similarly sees value in how artifice provides a distance to reality which, in turn, allows people to reconnect to that reality in a more real way.³⁷

Mormon practices of vicarity are fundamentally different from what most Christians have practiced, and in fact serve different theological ends, since playacting for Augustine or Lewis is a private, even pious affair, while pretend in Mormonism depends on the presence of an audience. Yet Christian understandings of play-acting and vicarity do serve as useful comparisons to Mormon theatricality. For example, Lewis's words mirror the epitaph at the beginning of this dissertation, taken from an instruction manual the Mormon Church published in 1980 as guidelines for local congregations planning theatrical events: "Vicarious experiences that confirm truth while entertaining an audience can make good theatre." There is a tremendous message packed within that one sentence. Implicit in this perspective is that God, truth, or immediacy may be ascertained by humans only through the process of pretending. Augustine presumes the inverse is true as well, that God interfaces with humans only by donning the character of "God." Just as a child's imaginative play-acting draws her closer to a world otherwise unknown to her, in the same way a believer may draw closer to heaven through vicarious enactments of someone or something else. In this framework, Jesus' teaching that, "except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven" takes on a new meaning.³⁸

Even though these examples demonstrate that Mormons are not alone in the attention they give to a theatrically-possible theology, stories of a transformed person, a god in disguise, or mistaken identity greatly inform the Mormon faith. The favorite model of transformation seems to be none other than the singular Jesus himself; after all, Jesus concedes to the theatrical necessity of discipleship. Modeling human life after divine beings is central to Jesus' teachings in both the ancient world and the new world. His biblical counsel to "Be ye perfect, even as your Father which is in

³⁸ Matthew 18:3.

heaven is perfect” elevates the ability to perform, and to do it well, to the realm of utmost divinity.³⁹ Indeed, in The Book of Mormon, the resurrected Jesus asks the Nephites “what manner of men ought ye to be?,” answering his own question with “Verily I say unto you, even as I am.”⁴⁰ Most crucial, however, may be Jesus’ act of surrogacy in taking on the sins of every individual and dying on the cross for them all. This tremendously powerful testament to vicarity defines the relationship many Christians have with Jesus who, in turn, teaches them how to act and speak for one another.⁴¹

His reliance on parables, a genre notable for the way meaning is disguised by clever rhetoric, also make Jesus a slippery figure. In fact, Jesus has a remarkable ability to disappear and then reappear in unexpected places. The resurrected Jesus is mistaken for a stranger by his disciples on the road to Emmaus, thought a gardener by Mary at his own tomb, and, in the song “The Poor Wayfaring Man of Grief,” which was reportedly sung in the hours leading up to Joseph’s death, a story is told of charity given to a stranger who, in the final verse, is revealed to have been Jesus in disguise. “Then in a moment to my view/The stranger started from disguise./The tokens in his hands I knew;/The Savior stood before mine eyes.”

As we learn from Joseph’s First Vision, though, a disguised Jesus is always just “going about his father’s business.” Perhaps his shape-shifting is not a cheeky magic show to test human credulity, but rather a training session on how to be more like the God he vicariously represents. Mormons take this attribute of Jesus very seriously. The base of Mormon theology is that mortal life is preparatory for godliness, and that men are something akin to gods-in-training. Lorenzo Snow’s oft-quoted couplet “As man is, God once was; as God is, man may become” succinctly captures this

³⁹ Matthew 5:48.

⁴⁰ 3 Nephi 27:27.

belief in both the materiality of God as well as the godly potential of all mortals.⁴² Mormons thus take Lewis’s counsel to ends that far exceed his vision of Christian humility. If Jesus and other holy men were so favored and skilled in the art of disguise (or frankly, in some cases, deceit), perhaps within the Mormon impulse to perform is the instinct for the apprentice to model the master.

Braden Bell’s 2010 novel *The Road Show* illustrates this point perfectly. Road shows are “miniature musical comed[ies]—usually from ten to fifteen minutes in length” that Mormon congregations plan and perform together, often in friendly competition with neighboring congregations.⁴³ Bell’s novel tells how one Mormon congregation was changed in the process of such a theatrical venture. Scott, the road show director, is a young Mormon struggling with a pornography addiction. He battles depression and intense feelings of unworthiness while writing and directing the play. During the performance, Scott plays the role of a leper and Curtis, his priesthood leader, plays Jesus. Scott and Curtis both have transformative experiences on stage when the actual Jesus speaks through Curtis—a Mormon overwhelmed with Church responsibilities—and directly to Scott—a man who is very aware of his personal failings. For Curtis, “In that instant, it all came together. As he stood on the stage dressed as the Savior, saying the Savior’s words, he felt that he stood on holy ground. He felt honored and almost overwhelmed to be in that position. He was full of reverence and awe. And most of all, he felt love.”⁴⁴ Scott, meanwhile, finally found relief from his shame and guilt as Curtis’s portrayal of Jesus somehow became more than just a performance. “He knew the figure above him was merely Curtis in a wig, but there was more going on. Somehow,

Curtis was a focal point, a mirror reflecting a far greater presence. Curtis, Scott's priesthood leader, represented the Savior. Scott knew he was clean."⁴⁵

This story is fictional but nevertheless points to the transformative power Mormons grant to impersonation, mimicry, and performance. An otherwise common theatrical experience turns out to be the means by which faithful Mormons come closer to Jesus, in this case through both impersonating him as well as learning to see (and hear) Jesus in another person. So much of Jesus' identity seems a clever affront for a hidden god within human form, but for Mormons this quality makes Jesus more immediate, relevant, and accessible. And as theatricality gives Mormons a glimpse into their biggest role as someday-gods, an opportunity to perform as Jesus on stage is just the beginning.

With One Voice

In 1897, Church president Wilford Woodruff recorded his testimony on a wax cylinder in Salt Lake City, Utah, becoming the first Mormon prophet to record his voice. The significance of this event can't be overstated. Mormons have long understood the prophet to be the literal mouthpiece of God. This phonographic encapsulation of a prophet's voice, then, is the capturing of God's voice. And since Woodruff's is the first prophetic voice we have on record, this initial foray into phonographic magic is a starting point for understanding not only the language, but the vocal essence—what Robert Frost called the “oversound”—of the prophet and God himself.⁴⁶ It is here where the voice of the prophet becomes real to modern Mormons, and it is to this point where Mormons attune their ears and voices in the practice of vocal vicariness.

⁴⁵ Bell, *The Road Show*, 112.

⁴⁶ Frost uses “oversound” in his poem “Never Again Would Bird's Song Be The Same” to refer to Eve's “tone of meaning but without the words.”

For all that Woodruff could have used his precious few minutes of wax cylinder space speaking to, he chose to testify to events from 1844 that affirm Brigham Young's rightful place as successor to Mormon prophet and founder Joseph Smith. As they were the day Joseph's voice came sounding out of Young's mouth, the stakes here for Woodruff are quite high. No doubt, as Joseph's son Joseph Smith III was putting pressure on Latter-Day Saints in Utah to join the "true" Mormon faith—the Reorganized Church of Latter Day Saints, now Community of Christ, headquartered in Independence, Missouri—Woodruff felt it important to strike down any insurgency from that splinter group. Woodruff specifically testifies that Joseph met with the twelve apostles and “delivered unto them the ordinances of the Church and kingdom of God,” and confirms that the temple endowments were received directly by the hand of Joseph, rather than a later development or invention of Brigham Young's—two contestable claims that the rightfulness of the LDS Church hinged upon.

Mormons were awestruck by the implications of a recorded voice. In an 1897 editorial in the Mormon-owned *Deseret News*, one writer wonders at the technological powers of capturing Woodruff's voice. He even goes so far as to suppose that God must use an instrument similar in design to render perfect judgment in the afterlife.

If mortals can manufacture instruments that can register the tones of the human voice with such fidelity as they are produced by the gramophone, what may not be presumed of the capabilities of the higher powers, even on perfectly natural principles, to bring forth to the dismay of the wicked, pictures and sounds of deeds and sayings which they cannot deny, to confound them in the presence of the Eternal Judge. “Out of thine own

mouth shalt thou be judged,” may turn out to be something more than a mere figure of speech.⁴⁷

As remarkable as this editorial is, Mormons weren't the only ones quick to connect phonographic powers with eternal powers. Media theorist Friedrich Kittler reports that *Scientific American* decreed in 1877 of Edison's invention, "Speech has become, as it were, immortal" under the headline "A Wonderful Invention—Speech Capable of Infinite repetitions from Automatic Records."⁴⁸ Ceaseless repetition, it seems, made the heavens more proximate than ever before imagined. God has been listening, the editorial almost hysterically hisses, and he can listen with exactness by tuning in again and again and again. The repetitive potential of the phonograph explained how God's listening ears might be infallible, and for the first time ever, humans could be made to hear the way God himself has been eavesdropping on his creation all along. By the early twentieth century, some had even come to believe that technology could capture every voice that was ever uttered since, theoretically, the voice was still vibrating the air, just at too low a frequency to be audible. Guglielmo Marconi, the Italian inventor of long-distance radio transmission, argued that the wavelengths from Jesus's Sermon on the Mount were still bouncing through the air and could be heard if a sensitive enough microphone were developed.⁴⁹ Even into the mid-century, science fiction spun tales of technology as mundane as the telephone that allowed the living to speak and listen to the dead, as depicted in *The Twilight Zone* episodes "Long Distance Call" and "Night

Call,” from 1961 and 1964 respectively.⁵⁰ Recording technology has thus created a paradigm shift among religious listeners, Mormons included. As Kittler suggests, “technology literally makes the unheard-of possible.”⁵¹

Without Marconi’s sensitive microphone, we have no recording of that infamous outdoor meeting in 1844, so we cannot know for certain what Brigham Young’s voice sounded like, or Joseph Smith’s for that matter. This seems an unfortunate absence in today’s world where seemingly every word is embalmed by digital recorders upon delivery. It is increasingly unfathomable to comprehend a vanishing voice that simply cannot—and will never be—recalled. We may in fact be unknowingly suffering from this situation, having in effect solved the riddle of immortality with the capability of hearing any voice on demand by bargaining away our attention to voices sounding around us in real time. People today can recall images and sounds with the press of a button, in other words, and therefore we may not be listening as closely to the voices around us as people once did. Stephen Connor calls this assumption of permanency “the loss of the loss of the voice.”⁵²

People lived without the expectation that voices could be preserved, so they developed listening techniques that allowed voices to be retained in human memory with as much fidelity as possible. In her humorous but poignant search for the voice of celebrated actress Sarah Siddons (who died decades before the phonograph was invented), Judith Pascoe acknowledges that locating a lost voice is not so much out of an interest in the voice per se, but an attempt to recover how that lost voice was once heard. Pascoe wonders “if I could figure out how Siddons sounded, I might also understand how people listened in the romantic period and how that style of listening influenced

what they heard.”⁵³ “Even as the voice has become ever more easily recordable, transferrable, and portable,” she laments, “it may have slipped farther out of memory’s reach.”⁵⁴

The fragility of the human voice was certainly something early Mormons were aware of, and because of their awareness we have a fairly good idea of how those now lost voices were once heard. Especially after Joseph’s death, when it began to seem that Jesus’s return to earth may be further afield than most followers were initially led to believe, Mormons became much more vigilant about recording and preserving the words and actions of their leaders who, as proxies for the voice of God, were vessels of divinity on earth. The voluminous diary and journal entries attesting to Brigham Young’s transfiguration are proof of this recording frenzy. Mormons today continue to diligently record their words and actions for posterity. Still, as much as speech may be captured on paper, the voice itself remains irretrievable without recordings.

Enter Wilford Woodruff’s wax cylinder. The intrusion of the phonograph was only an example of technology preserving in mechanical form what Mormons had thus far encapsulated in mythical form. Through Woodruff’s recording, Mormons today not only have a preserved sense of a prophet’s voice, but indeed may have captured *the* prophet’s voice. If Young was able to carry forward the voice of Joseph, even if only provisionally, then perhaps Woodruff too, as prophetic successor, modeled in his testimony the speaking voice of his predecessors and, ultimately, the Mormon founder. Even in death, then, Joseph’s voice continues to shape the church he founded through the vicarious processes of prophetic pronouncement. In the words of Truman G. Madsen, “Notes are often misplaced and forgotten. But this recording preserves indelible firsthand

experience. With transparent clarity, [Woodruff] blends Joseph’s words with his own. This, Joseph’s last testimony to the Twelve, became his own.”⁵⁵

We might take Pascoe’s mission to “understand how people listened in the romantic period” as our own, using Woodruff’s recording to determine the voice Mormons attuned their ears toward when they listened for the voice of God, but also as a litmus test to gauge how prophets *did* (and perhaps *ought to*) speak even still today. Mormon leaders and laity today continue to base their prophetic utterances upon a vocal model encapsulated through recordings of the prophets. Mormons gather twice a year at General Conference to listen to Church leaders (commonly referred to as general authorities) speak; what they hear is a unified voice providing a unified message. Listen backwards into the twentieth century and you will hear that virtually all General Conference speakers sound alike. Numerous YouTube compilations of Mormon prophets bearing testimony makes this comparison a simple process. The cadence, breath control, inflection, and length of pause between phrases mark the speech as sacred or prophetic (rather than mundane, or profane to use Durkheim’s dyad) as much, if not more, as the similarity among any words or phrases themselves. Clearly there is some kind of listening technique at work whereby subsequent prophets, perhaps enabled by the office he holds or else as the result of years of hearing prophets speak this particular way, match vocal inflections to a historical standard.

Given the scriptural pronouncement that “whether by mine own voice or by the voice of my servants, it is the same,” it is unsurprising that everyday Mormons inevitably appropriate this common, prophetic voice in their religious speech acts. Anthropologist David Knowlton has

⁵⁵ Quoted in Richard Neitzel Holzapfel and Stephen H. Smoot, “Wilford Woodruff’s 1897 Testimony” in *Banner of the Gospel: Wilford Woodruff*, edited by Alexander L. Baugh and Susan Easton Black, published by the Religious Studies Center, Brigham Young University (Provo, UT: Brigham Young University, 2010), 114.

Woodruff’s testimony regarding Joseph Smith also mirrors the way Joseph translated The Book of Mormon. Joseph used scribes rather than a phonograph, but the method was the same—a recitation of words and syllables captured from the air and inscribed onto pliable material.

pointed out this trend in terms of grammar choice, noting that on the local level, Mormons adhere to the form and structure in testimony or prayer that is used by the prophetic leaders. “Most Mormons can reproduce the style, and probably do when they bear testimony,” he writes, “and usually they are not conscious of doing it. We are native performers, experts, and do it unawares.”⁵⁶

Indeed, the Mormon vocal model goes beyond mere syntax, and is inscribed in the vocal product itself, as any comparison of prophets speaking will show. What Mormons do is not just impersonation or rhetorical matching, although those are important components of the standard prophetic voice. Rather, Mormons in essence demonstrate their righteousness by ventriloquizing the voice of their leaders. It is important to note that God’s delegation of voice in Mormonism is not one-directional or contained only within the prophet-deity relationship; in effect, this ventriloquism exploits both the experience of speaking through and of being spoken through. As Stephen Connor has argued, the history of ventriloquism is a history of the tension between “the power to speak through others or as the experience of being spoken through by others.”⁵⁷ Therefore, Mormons use the prophetic voice to speak for their own experiences with the divine or, inversely perhaps, the prophet speaks vicariously through each member to confirm for listeners the truthfulness of testified experiences.

Regardless of the phenomenological apparatus at work in Mormon mimicry, relying on “sacred codes” in their prayers and testimonies allows Mormons to get a feel for what it is like to speak with divinity even as that “divinity” gets channeled through the voices and bodies of those devout members. Even more, by picking up and modeling the standardized vocal patterns of the prophets, Mormons can and have learned essentially to speak on behalf of God. Samuel Brown

⁵⁷ Connor, *Dumbstruck*, 14.

argues that verbal standardization in fact makes prophets out of spiritual paupers, writing that “uttering God’s actual words allows the worshippers to become mouthpieces for the divine Word.”⁵⁸ Speaking a certain way is thus a marker of belonging, an emblem Mormons employ to broadcast that they have staked a claim in the institution and agreed to willingly make the voice of the prophets the voice of their own, and thereby sound inflections of God.

In a larger Christian context, the ability to voice God is arguably written into our DNA. Stephen Webb, in his book *Divine Voice: Christian Proclamation and the Theology of Sound*, argues that all human speech is a priori of and for God. The theological necessity of hearing God’s word, whether given by Jesus, a prophet, or another medium, gives meaning to our ability to speak to Him.

Theologically construed, speaking is not a trait projected upon God by analogy to human experience. We do not speak first and then think about God as speaking too. On the contrary, we can speak only because God created us to be hearers of God’s Word. We are created in God’s image, but that image is more like an echo than a mirror. God spoke us into being so that we too might have the joy of sharing in the spoken Word.⁵⁹

Webb is tackling first the very nature of speaking *to* God, not necessarily the practice of speaking *on behalf of* God, but his observation is a helpful point of departure for how Mormon theology is distinct from that of Christianity. For Webb, human vocality is intrinsically imitative since God’s presence is tucked within every human utterance; in a prayerful cry for supplication, God effectively is speaking through the supplicant to Himself. God as a divine feedback loop is very different from the Mormon perspective that God delegates vocal power not for his own sake (though fundamentally this may be the case) but rather in pursuit of a standardized, broadcasted message to

all who may hear. It is for the sake of the hearer that the Mormon God permits vocal vicarity. As a result, Mormons are much less interested in why God allows them to speak or hear than they are in fulfilling God's commandment to act as his surrogates to as many people as possible. It is in God's best interest, then, to establish a mechanism whereby Mormons may learn and then practice for themselves the voice of God as given to the prophets.

Even though the process of speaking a standardized voice may seem instinctive or proceed unconscious for many Mormons, a lot depends on this vocal modeling. Inaccurately voicing the pattern and sound of Mormon leaders is an aural admission of dilettante status. Knowlton understands the stakes in a Mormon testimony meeting when he writes, "Performance, like it or not, becomes the critical means of determining whether a given individual is righteous or spiritual."⁶⁰ Failure to perform an accurate portrayal of the standard makes the novice easily classifiable—a forgivable grievance if in fact a novice you are, though highly suspect if you are a familiar, long-term member. The disciplining of the Mormon voice, even if done without much attention to itself, is what Mormons attune their ears to whenever anyone steps up to the microphone at a testimony meeting and begins with the familiar phrase, "Brothers and sisters, I'd like to bear you my testimony."⁶¹

Others have written about the transcendence a modeled voice can bring to a community in crisis. Indeed, the association between religious expression and a standardizing voice is far-reaching. Most recently, anthropologist Nicolas Harkness has noticed similar impersonation trends among Christian communities in Seoul, South Korea. Harkness writes that South Korea's remarkable

⁶⁰ Knowlton, "Belief, Metaphor, and Rhetoric," 27.

⁶¹ Practicing vocal delivery in public is a double-edged sword, however. As Tom Mould writes, "Frequent revelation signals a righteous person; frequent narration of revelation signals a self-righteous person." Tom Mould, *Still, the Small Voice: Narrative, Personal Revelation, and the Mormon Folk Tradition* (Logan: Utah State University Press, 2011), 68.

transition from one of the poorest countries in the world to one of the wealthiest in but a few decades has left a sonic imprint on the Korean voice. Koreans today speak of the voice as “clean” or “unclean” in reference to a changing sound quality that emerged during the country’s radical reinvention. Harkness hears how this new aesthetic has reached the evangelical Christian practice of glossolalia, as well as the operatic conventions in classical vocal training. As a singer studies with a master teacher in South Korea, for example, the student is expected to take on the vocal sound, or *qualia*, of that teacher. The vocal modeling is understood as an act of submission and respect. “The disciple is supposed to be of service to the teacher,” he writes, “and likewise the disciple’s voice should replicate *qualia* of the teacher’s voice. By doing so, students index the teacher’s authority through the *qualia* of the voice itself.”⁶²

In her 1976 novel *Meridian*, Alice Walker describes a scene where Martin Luther King, Jr.’s voice is directly modeled by a black preacher in the months immediately following King’s death. The voice, which Walker’s character Meridian perceives to be “the voice of millions,” is clearly an affective portrayal, yet those in attendance seem to find great truth in its blatant artifice.

The minister . . . spoke in a voice so dramatically like Martin Luther King’s that at first Meridian thought his intention was to dupe or to mock. . . . It struck Meridian that he was deliberately imitating King, that he and all his congregation *knew* he was consciously keeping that voice alive. It was like a *play*. This startled Meridian; and the preacher’s voice—not his own voice at all, but rather the voice of millions who could no longer speak—wound on and on along its now heated, now cool, track. God was not mentioned, except as a reference.⁶³

Walker's scene captures the essence of theatricality in vocal modeling. It mirrors the kind of bewildering experience I had when first confronted by this singular prophetic voice in Mormonism. Reading this passage also stirs within me a physiological response to the prophetic vocal patch I too once felt and heard in my testimonial speech. Speaking with the voice of a prophet, who likewise was speaking on behalf of God, comes close to what I imagine glossolalia, or speaking in tongues, must be like. But Mormons don't do this charismatically, at least not anymore. Instead, through a vicarious voice they stand alone and speak together. With ears attuned to the particularities of the prophetic voice, listeners hear snatches of God speaking in others. The implicit message becomes the explicit one. Meridian was correct: in this type of situation, the vicarious voice makes God's voice all-encompassing, and God only needs to be mentioned as a reference.

It is telling when voice becomes apparent, an urgent issue to be addressed—especially when, as in this case with Meridian, it becomes suddenly apparent that iconic leaders are easily, and readily, mimicked. What Meridian or any Mormon is hearing when a leader's voice is modeled is not an honorific for beloved or departed voices, but rather a purchase on the desire for a believable, charismatic voice. Voice, in fact, may be more important in determining a leader than often believed. In his intriguing analysis of vocal charisma among political leaders in Italy and France, Rosario Signorello argues that leaders effectively use voice to demonstrate affability, persuasion, empathy, or aggression—key attributes that are culturally encoded in speech and deciphered as charisma by attuned listeners. “Voice is one of the most reliable and efficient behaviors that reflect the speaker's morphological apparatus (that of a female vs. male, adult vs. child) and their psychological attributes,” he writes. “Voice has evolved in order to signal traits of social and physical dominance to others and it plays an important role in individuals' ability to perceive good leadership.”⁶⁴

⁶⁴ Rosario Signorello, “Voice in Charismatic Leadership” in *Oxford Handbook of Voice Studies*, edited by Nina Sun Eidsheim and Katherine Meizel (New York: Oxford University Press, forthcoming).

For Mormons to model the vocal characteristics of their leaders might productively be understood within the context of social evolution. Leaders use what Signorello calls “biological predisposition[s]” and “cultural strategies of expression” to capitalize on listeners’ evolved sense of what a good leader “sounds” like.⁶⁵ Mormon vocal mimicry goes beyond evolutionary trends, however, and is set apart by its overt theatricality. This kind of vocal modeling points back to explicit vocal performance and mimicry, the attempt to capture what Erving Goffman called the “given-off” of vocal expression.

Conclusion

From Woodruff’s wax cylinders of 1897 to today, a standardized voice emerges as a sonic emblem of divinity that Mormons model to show piety. Members construct this chain of vocal vicarity—speaking with the voice of the prophet, who is likewise speaking the voice of God—in an effort to pattern more closely their lives in godliness. Indeed, as with the example of Brigham Young, the closer a Mormon can sound to the model, the greater his likelihood of ascending the Mormon hierarchy—it is but a small exaggeration to say that an everyday Mormon becomes a prophet by successfully voicing Mormonism. Spending enough time in a Mormon congregation and listening to how the men speak, one learns that those who sound more like the model will be the next-in-line for local leadership positions.

The Mormon hierarchy comprises exquisite performers, all devoted to honing the craft of theatrical virtuosity in their role as proxies for God. Moreover, each faithful Mormon is invested in listening and voicing techniques to move them closer to the divine through carefully calculated performances. As Mormonism have evolved, Mormons have made the small leap from their vocal

performative theology to embrace many of the conventions of American musical theater. The unfolding story for the following chapter is that Mormons have therefore gravitated toward musical theater not merely as a source of entertainment, but also as a mode of communication, a venue of religious practice, and an opportunity for social acceptance. Voice, of course, is of utmost concern in musical theater where, as with Mormonism, the voice on a musical stage serves a utilitarian purpose in channeling a person's ideology, personality, allegiances, and capabilities. In a genre where to sing is to belong, musicals inhabit a world where Mormons too want to belong: a world where the voice can show who can be trusted, who someone really is, and what that person longs to be. The Mormon devotion to and practical consideration of musical theater starts with the simple, everyday practice of listening for God in the voice of the prophet—his vicarious voice at once acting as a buttress of the Mormon status quo, and as a clear reminder that becoming like God is an act, and that the show must go on.⁶⁶

⁶⁶ It goes without saying that this hierarchical ascent is available almost never to non-native English speakers. This is not to say that Mormons in other parts of the world can't or don't have leadership positions; they do, but not in the top echelons. Dieter F. Uchtdorf, the first non-native speaker to become an apostle in over one hundred years, makes for a good counter example. Although he is fluent in English, Uchtdorf reveals his German heritage when he speaks—because of his accent he literally cannot voice Mormonism the “proper” way and thus cannot *sound* like a Mormon prophet. Uchtdorf's accent may seem benign, but he speaks like no other Mormon prophet alive today. It may be Uchtdorf's inability to sound the prophetic voice that has made him attractive to unorthodox or progressive Mormons.

Chapter 2

“I Sing that We’re Going that Way”:

Promised Valley, Integration, and the Singing Voice

“And he said, It is not the voice of them that shout
for mastery, neither is it the voice of them that cry
for being overcome: but the noise of them
that sing do I hear.”

Exodus 32: 18

“Thy watchmen shall lift up the voice; with the voice
together shall they sing: for they shall see eye to eye,
when the Lord shall bring again Zion.”

Isaiah 52:8

Singing carries a certain magical power in the service of death. Choirs of angels may be expected at the moment of death, a sonic hand grasping ahold of the faithful and pulling them toward their reward. On the other hand, the sirens ushered unwilling mortals to their death through beautiful singing. In some versions of the story, the mournful song of Orfeo stops even Sisyphus in his eternal peddling of the boulder up and down the mountain. But voice, like music more generally, has also occasioned mistrust. Mladen Dolar felt that singing signaled a kind of semantic death: the death of meaning. “Singing represents a different stage,” he writes, “it brings the voice energetically to the forefront, on purpose, at the expense of meaning. Indeed, singing is bad communication.”¹ If

bad communication is the result of the intoned voice, then it seems the musical stage would be the last place a group could find meaning.

Yet this is the story of how Mormons found great meaning and renewed purpose through exactly such a place. Chapter 1 explored how Mormon vocality emerged as an emblem of divine vicarity. This chapter looks at how the Mormon voice became magnified when Mormons moved to the musical stage—perhaps the platform from which voice is the most consequential. From the mid-nineteenth century to the mid-twentieth century, Mormons regularly found themselves lampooned on the stages of New York, Boston, London, and elsewhere. As the Mormon Church attempted to create a more acceptable image for itself and its members in the early twentieth century, however, it turned to musical theater as the venue for achieving broader acceptance in American life. I trace the legacy of musicals in and surrounding Mormon life leading up to the commission of the musical *Promised Valley* in the 1940s. The show helped Mormons cash in on a particular kind of American identity, but also illustrates how vocal discipline became the means by which Mormon vied for broader acceptance from the country they once fled.

Brigham Young and the Salt Lake Theatre

When Brigham Young spoke with the voice of Joseph Smith outside Nauvoo, Illinois in 1844, he not only initiated a practice of vocal modeling still in use today, but he also revealed glimpses of his theatrical side. The hardy image Brigham Young enjoys today—sire to fifty-six children, unflinching zealot with a sizable beard, and a seeming emblem of benevolent American frontier stock—hardly seems commensurable with the image of a thespian. Yet Brigham Young may be thanked for the tremendous outflow of theatrical and musical culture that permeated the otherwise barren Salt Lake Valley. When the Saints (as Mormons continue to call themselves) made the 1300-mile trek across the plains and over the Rocky Mountains into present-day Utah, Young

made sure they were accompanied by a brass band, and theatricals sprang up at almost every juncture. In Nauvoo, when Joseph was still alive and Mormons enjoyed less desperate times, plays, dances, and musical evenings were common. En route, theatrics were meant as diversions, perhaps as much protection from the wind and blisters as their threadbare coats and sole-less shoes. Theatricals put on by Mormon pioneers made the harsh winter stay in Winters Quarters, Nebraska, somewhat more bearable. Young looked at the situation matter-of-factly. “The people must have amusement,” he once said, “human nature demands it. If healthy and harmless diversions are not attainable they will seek those which are vicious and degrading.”²

Once in the Salt Lake valley, Mormons began planning their new city around a new temple. Plans for the Salt Lake Temple were announced almost immediately when the Mormons arrived in 1847, but construction on the Salt Lake City Temple did not begin until six years later. Not until 1893—almost two decades after Young’s death—was the temple completed. In the meantime, Young set to work on building the Salt Lake Theatre, which opened in March 1862. Dubbed Young’s “Thespian temple” by the *New York Times*, the Salt Lake Theatre was heralded as “the greatest material wonder of Utah.”³ The building was not overly large or grandiose, seating around 1,500 people, but it served an almost divine purpose. In the theatre’s dedicatory prayer, Brigham Young’s counselor Daniel H. Wells prayed that,

As the unstrung bow longer retains its elasticity, strength and powers, so may Thy people who congregate here for recreation, unbend for a while from the sterner and more wearying duties of life, receive that food which in our organization becomes necessary to supply and invigorate our energies and vitality, and stimulate to more enduring exertions

in the drama of life, its various scenes and changes which still in Thy providence still await us.⁴

Clearly, the Salt Lake Theatre was more than just an entertainment venue for early Mormons. The Theatre represented the culmination of a promise given to the faithful by those weary performers who nightly spun out intimate tales, skits, songs, and dances that contrasted sharply with the enormity of the trek westward. These performances “without a doubt were the first causes, the germs from whence sprang the widespread interest in the drama among the Utah pioneers,” one writer recalled.⁵ It was in that building where feelings of isolation were diminished by the antics of traveling performing troupes, and where the musical and theatrical qualities of Mormons themselves began to blossom.

The Deseret Musical and Dramatic Society was formed out of the brass band and outfit of performers who entertained during the slow march of the pioneers. Soon, a great artistic culture blossomed in the desert valley. When a *New York Daily Tribune* article ran a review of Utah poet Sarah E. Carmichael in 1865, the reviewer could hardly contain his surprise.

Can any good thing come out of Nazareth? The utter isolation, the iron social and mental limitation of this community would seem to render it the last place in the civilized world favorable to mental development, but talents, like gunpowder, must have vent, and the poet once born, no Medusa can strike him dumb.⁶

Many other Mormons began to excel in the arts, and those converts from the East Coast and Western Europe continually streaming in brought with them musical skills and an eagerness to share their cultural artistry. But as impresario and actor, Young seemed to enjoy the stage perhaps more than most others. Young played the role of “High Priest” in Richard Sheridan’s 1799 play *Pizarro* in Nauvoo shortly before Joseph was killed. If Young was a convincing actor in Nauvoo, it seems the part of religious zealot rather grew on him in the following decades. Director Thomas Lyne humorously “regretted having cast Brigham Young for that part of the high priest” because, as the new prophet and controversial militant leader, “he’s been playing the character with great success ever since.”⁷ *Pizarro* was also the first play produced in the Salt Lake Theatre and, as Jeremy Ravi Mumford claims, the show “went on to become something like the Mormons’ national play, a reliable favorite over the decades.”⁸ Nineteenth-century Americans likely saw in Sheridan’s tale of Spanish conquest in Peru a familiar trope of America’s colonizing Native American lands. Once again, Jacksonian ideologies of self-fashioning and fierce independence come through in the Mormon instinct to perform.

Young’s love for the theater further distances him and his followers from other nineteenth-century religious groups that, at the time, held a much less favorable opinion of drama. Henry Ward Beecher held a particularly poor view of actors, who he uncharitably dismissed (possibly with homophobic prejudice) as “tickling men.”

They eat, they drink, they giggle, they grimace, they strut in garish clothes—and what else? They have not afforded even useful amusement; they are professional laugh-

makers; their trade is comical, or tragical, buffoonery—the trade of tickling men. We do not feel any need of them before they come; and when they leave, the only effects resulting from their visits are unruly boys, aping apprentices and unsteady workmen.⁹

The Mormon prophet, on the other hand, unapologetically supported the theater and took great interest in all its wonders. Theatrical guise won him his religious office, after all. Young may have won the bet on Mormon leadership by a well-thrown voice, but he also ensured that the cultural trappings of their abandoned home weren't lost for good. One prominent actor in the Salt Lake Theatre once described Young as a “champion of the drama and friend of the actor,” confidently adding that he “did more to elevate the drama and encourage the histrionic art, in his day, than perhaps any man in America.”¹⁰

As I explored in Chapter 1, Young demonstrated his support of theatricality in more ways than just what appeared on the rough-hewn stages of the Salt Lake Valley. Vocal theatricality and disguise were continually practiced in the nineteenth century, typically in defense against perceived threats to Mormon religious liberty. Indeed, Mormon leadership and laity alike continued to find reason or excuse to mask their identity in the face of intrusions by outsiders. Perhaps the most repulsive example of Mormon deception is the infamous massacre near Mountain Meadows in southern Utah. In 1857, a group of Mormon militiamen disguised themselves as Paiute Native Americans and attacked an emigrant party en route from Arkansas to California. In what some describe as a horrific example of war hysteria from the Utah War, or perhaps in retaliation against previous transgressions against Mormons—including the ambushed murder of seventeen Mormon men in the 1838 Hahn's Mill Massacre in northwestern Missouri—the Mormon militia commenced

to slaughter around 120 men, women, and children, their bodies hastily buried and surviving children given to Mormon settlers to raise. It remains unclear what degree of responsibility Brigham Young had in the massacre's planning, execution, and aftermath.

The Mountain Meadows Massacre is a sad reminder of the violence by which early Mormons defined their relationship with outsiders. Isolated examples of Mormon violence or stories of other Mormon peculiarities only fanned the flames of anti-Mormon sentiment. By 1865, with the rest of the country looking to heal deep wounds left by the Civil War, Mormon practice of plural marriage, or polygamy, had become a rallying cry of many Americans and, as Patrick Mason has argued, eliminating polygamy became one of the first topics of mutual interest for otherwise bitter communities in the north and south.¹¹ The feverish fight of American moralists to eradicate polygamy and slavery had erupted nine years earlier at the 1856 GOP Convention when both practices were labeled "twin relics of barbarism."

In the face of continuous pressure from the United States government to desist the practice of polygamy, and with "gentiles" visiting Salt Lake City more frequently, Mormon leaders insisted that misleading or lying to those intent on destroying their way of life was morally defensible. Well into the twentieth century, Mormons and their leaders repeatedly said one thing to appease their listening enemies while really intending quite the opposite. As one Mormon apostle succinctly put it, "Some things that are true are not very useful."¹² Thus "lying for the Lord," as the practice became known, perpetuated Mormon dishonesty about the whereabouts of religious leaders in order to protect them and others who practiced polygamy. This practice arguably is an outgrowth of the kinds of deceptions Brigham Young performed in mimicking Joseph Smith or the scriptural

precedent of Nephi taking on the identity of Laban, whom he has just murdered in his sleep. The vocal discipline enacted throughout nineteenth-century Mormonism further required the faithful to be carefully attuned to their leaders' voices, perhaps perpetually reminded of God's warning that "whoso receiveth not my voice is not acquainted with my voice, and is not of me."¹³

All the kerfuffle surrounding Mormons and polygamy officially came to a halt with the 1890 Manifesto by Church president Wilford Woodruff, though many Mormons considered Woodruff's concession simply a part of the act that had been perpetuated for decades. Woodruff apparently did not really mean what he said either, as he secretly continued the practice of sealing plural families in the Mormon temples and privately sanctioned many marriages to the Mormon elite. The final nail in polygamy's casket was secured in 1904 by Woodruff's successor, Joseph F. Smith, with his "Second Manifesto," which essentially put some teeth in the original revelation. It worked. Smith's this-time-we-mean-it manifesto made it clear that any Mormons practicing plural marriage were to be excommunicated from the Church, a policy still in effect today.

Nonetheless, the Mormon culture of wit, deception, and disguise had been defined and continues to remain in effect, even after Smith's "Second Manifesto." Theatricality did not lessen in importance as the twentieth century dawned, but shifted into a new terrain in the form of musical drama. As the site for numerous plays, concerts, burlesques, and minstrel shows, the Salt Lake Theatre also became a focal point for the newly established frontier city. As Howard R. Lamar argues, theater was a sign of civilization and therefore a demonstration against disparaging portrayals of Mormons as violent polygamist barbarians. As much as it served to signify normalcy and civility, the theater also gave Mormons a venue to practice performing a new identity—an increasingly pressing skill since the arrival in 1869 of the First Transcontinental Railroad in Utah made the

isolation Mormons first enjoyed a dwindling possibility and wider acceptance a more luring prospect. When the Salt Lake Theatre was torn down in 1928 to make room for a parking lot, Lamar writes, it was without regret a hopeful symbol “that the old had made way for dozens of new theatrical enterprises in Utah.”¹⁴

Mormons may have begun reinventing themselves with homegrown theatrical venues, but while Brigham Young presided over the Salt Lake Theatre, Mormonism was also making a big splash hundreds of miles away in venues of a different kind, with an ironic reversal of impact.

Mormons and Operetta

In 1917, *The New York Times* published a review of the new musical comedy *His Little Widows*. The show attracted a good deal of attention in part because the librettist, Rida Johnson Young, had written herself into musical theater history seven years earlier by penning the libretto to Victor Herbert’s sensational operetta, *Naughty Marietta*. The wordsmith of Herbert’s now-iconic song “Ah! Sweet Mystery of Life” tackled a very different topic with this musical. *His Little Widows* tells the story of a young man who is shocked to discover that, upon his uncle’s untimely death in Utah, he is to be betrothed to his uncle’s eleven wives. The story of a reluctant polygamist makes for a predictably farcical plot that sidesteps any moral opposition to polygamy in favor of lampooning its logistic absurdity, as the song “A Wife for Every Day in the Week” makes plain (see Example 2.1).

One wife for Monday, who’s crazy for wealth,
One wife for Tuesday, who’s not,
One wife for Wednesday to care for your health,
You can see where you’ll need her a lot!

One wife for Thursday to make pretty clothes
 For Friday and Saturday fair
 And Sunday? On Sunday, you'll rest I suppose
 Yes you'll rest, maybe so, but where?

The first two pages of the score to “A Wife for Every Day in the Week,” from *His Little Widows* (1917). Music by William Schroeder and lyrics by Rida Johnson Young and William Cary Duncan. Library of Congress, Washington, D.C.

Although little is remembered of it today, *His Little Widows* found a receptive audience in its time. “The new musical comedy which arrived with a bang at the Astor Theatre last evening is several times as amusing as the average of its kind,” raved the reviewer. Indeed, the review continues, part of what makes *His Little Widows* such a pleaser is how well displayed are “all the humors of Mormonism.” Despite the show’s charm in making “merry with the subject of

Mormonism and plural marriage,” however, the reviewer is still alarmed that audiences could laugh at such a serious topic like polygamy so willingly. In the minds of many Americans, even by 1917 Mormons were still not off the hook for their past sexual transgressions. Decades of vilification in media and popular culture, including musical comedy, had made Mormonism just too appealing to let go of. “Then, too,” the reviewer shrugs, “Mormonism is just about the only religion that can be exploited in musical comedy.”¹⁵

His Little Widows was continuing in a tradition of operetta that “exploited” Mormonism in comedic ways. In fact, throughout the nineteenth and early twentieth centuries, Mormons and Mormonism were frequently put on display through some form of musical comedy, whether that be operetta, vaudeville, or the occasional burlesque. These depictions were uniformly negative. In 1871, Lydia Thompson’s burlesque troupe adapted Jacques Offenbach’s 1866 operetta *Barbe-bleue* to liken the infamous serial lady-killer with Mormon polygamists. In a Scottish style, Blue Beard the polygamist vaunts amorously,

Blue Beard is my name!

Polygamy’s my fame

For the girls I seal ‘em quick,

Mormonise them very slick.

Blue Beard is my name

Polygamy’s my game

And my castle’s down at Salt Lake City.

Rescue us and make us free?
From these bitter woes deliver!
Though extreme the complication,
Let us now, before we part,
From the depths of tribulation
Hail thee sovereign of the heart!

Other operettas followed, including *The Mormons* in 1895 that featured songs as telling as “The Marriage Monomaniac.” Between 1895 and *My Little Widows* in 1917 came the Mormon-themed operetta with perhaps the most significance to musical theater historiography. *Girl From Utah* was an enormous hit in London in 1913 and caught the attention of American theatrical producer Charles Frohman. He enlisted young composer Jerome Kern to add interpolated songs to Paul Rubens’s original score and produced *Girl From Utah* in the United States in 1914. By this point in his career, Kern had been working as rehearsal pianist and occasionally would write interpolations for Frohman. This would be the first time Kern would receive billing and advance publicity for his interpolations. One song Kern added, “They Didn’t Believe Me,” became his first big hit, and a largely unremembered force that shaped American musical theater. Kern’s biographer Gerald Bordman went so far to say that, “this great song established the popular musical comedy number as it was to remain for the next half-century.”¹⁶ The tune reportedly caught the attention of such titans of American musical theater as Victor Herbert and George Gershwin, and helped validate newer American styles and conventions that would later come to define American musical theater.

“Aspirations toward whiteness”

American and British operetta that lampooned Mormons fanned the flames of growing anti-Mormon sentiment in America, but eventually this cynicism may have helped relieve such ethnic tension. As musical theater developed in densely populated urban areas where close-quartered ethnic groups increasingly led to violent brawls, musicals helped deflect actual violence by lampooning various ethnic groups on stage. As Raymond Knapp and Mitchell Morris argue, in pre-World War II New York City, Tin Pan Alley’s ethnic songs (such as the popular “coon songs”) served as a safety valve on ethnic hatred, “substituting travesty for assault and battery.”¹⁷ Similarly, hardened views of Mormonism, once displayed on stage, eventually dissipated into laughter. Therefore, anti-Mormon operettas during the nineteenth century may have in fact helped normalize Mormon behaviors in the early decades of the twentieth century, even in the process of derision.

Acceptance and normalization, however, were still a long way off. Many nineteenth-century Americans held unfavorable views of Mormons, in part because of peculiar practices like polygamy or communal economies, but also because the great physical distance that separated them from the rest of the country made the allure of the strange faith that much greater and prospects of meeting actual Mormons that much harder. For these reasons, Mormons were routinely viewed with suspicion by the press, and otherwise normative dimensions of their life and faith diminished by exaggerated accounts of polygamist families. Mormon men were almost universally depicted as violent, sex-crazed tyrants, and women their brainwashed prey. These rough depictions matched well with views of other feared tyrants of the world, including Muslim men. One political cartoon from 1842 made this connection obvious by depicting a Mormon polygamist family as living in a

harem, the tagline “I imagine it must be a perfect Paradise” hardly masking the titillation of simultaneously abhorring and admiring a man who seemed so sexually uninhibited (see Figure 2.2).

As the nineteenth century wore on, Mormons became more and more associable with other social pariahs, like blacks or the Chinese. Eventually, associating Mormons with other undesirable ethnicities led outsiders to suggest Mormons were in fact not white at all, but rather a different ethnicity altogether. This racial association stuck in spite of the fact that Mormons were overwhelmingly white and largely immigrants from Anglo-Saxon countries. Mormons tried their best to overcome these accusations, in historian Paul Reeve’s words, by “respond[ing] with aspirations toward whiteness.”¹⁸ In his book *Religion of a Different Color*, Reeve argues that the crisis of whiteness forced Mormons to search out ways of assimilating into mainstream American thought. The problem, however, was that racial identity in the nineteenth century was understood to be more than just appearances. Mormons were easily categorized as an ethnic minority not because they didn’t look white enough but because, for whatever reason, they did not *act* white enough. Reeve explains,

Mormon behavior—fanaticism, adherence to theocratic rule, ignorance, sexual promiscuity, plural marriage, fawning subservience, and violence—produced race. Polygamy, when combined with Mormon isolation spawned a “new race.” As outsiders viewed it, Mormon race was a performance; that is, Mormons *acted* racially degenerate, therefore they *were* racially degenerate.¹⁹

¹⁸ Paul Reeve, *Religion of a Different Color: Race and the Mormon Struggle for Whiteness* (New York: Oxford University Press, 2015), 3.

¹⁹ Reeve, *Religion of a Different Color*, 262.

For Mormons to again proximate whiteness, they would need to change their behavior. For a people adhering theologically to the promises of theatricality, pretending to be somebody they weren't was more than just a matter of survival; it was a matter of religious duty.

Perhaps as a sign of solidarity with other whites, or perhaps because by this point it was in such fashion, and probably because shifting identities through the stage was by now a critical skill to be honed, some Mormons began to perform in blackface. In the introduction, I discussed how Mormonism and minstrelsy bloomed from the same flowering shoot of Jacksonian ideology. Near the end of the nineteenth century, Mormons—in parallel to other ethnic groups such as the Irish and Jews—were using blackface to capitalize on those Jacksonian beliefs regarding whiteness and self-realization. Michael Hicks has written about the history of Mormonism and minstrelsy, claiming that Mormons may have been drawn to blackface because it conveniently satirized sectarian beliefs—a practice for which Mormons were also quite fond. Mormons also would have been drawn to minstrelsy's frivolity and appreciated the “attention of outsiders to help reinforce their sense of self-importance and maintain their identity as a distinctive people.”²⁰

Most pressing, however, is that performing in blackface gave Mormons the opportunity to ironically put on a black mask in order to act more white. This more desperate strategy shouldn't pardon nineteenth-century Mormons from the practice of blackface since, as I discuss in Chapter 3, Mormons have long held in balance a delicate and complex understanding of race. Rather, Mormons likely detected the echoing strains of self-actualization imbued within minstrelsy, recognized it as derivative of their birthright, and exploited it in order to turn the tables on the popular Mormon image. Acquiring the performance codes of demoralization, rather than merely absorbing them as they did as inflicted victims in operetta, must have been tinged with at least some measure of

ambivalence. Such ambivalence may have come from a moralist perspective, but the portrayal of blacks on stage may also have been a measured and deliberate attempt by Mormon leaders to balance perception of the religion as mainstream while also retaining a separate identity. Sociologist Armand Mauss has argued that in order to survive and prosper, Mormonism had to maintain “indefinitely an optimum tension” between greater acceptance on the one hand, and “greater separateness, peculiarity, and militance” on the other.²¹ Noting that “a religious movement must strategically reverse course from time to time as a condition of meaningful survival and success,” Mauss helps contextualize why religions like Mormonism sometimes appear to behave in strange, contradictory ways.²² Practicing minstrelsy to gain white respectability may be one of those strategic course reversals.

As noted, minstrelsy was proving useful for other marginalized groups, and would later prove invaluable for Jews as they too used the theatrical stage to assimilate, the burnt cork creating a mask to mock blacks from behind in order to cover their own ethnic or religious stain. At the time, however, the stakes for not belonging in America were quite high, and the relative passivity of mockery and satire on the stage may have seemed the lesser of evils in comparison to other forms of mistreatment coming around the corner. For Jews and Mormons in particular, the twentieth-century musical stage took on the shape of a shield and protection, albeit from different perspectives. The Jewish-American association with the musical theater has its beginnings with nineteenth-century Yiddish theater in the Burroughs of New York City, but most notably in musicals of the twentieth

This paradoxical sentiment bears resemblance to literary historian Stephen Greenblatt’s notion that culture “gestures toward what appear to be opposite things: *constraint* and *mobility*.” Paradox also describes what Mormon scholar Terryl Givens has most adamantly defended within the Mormon faith. century, Jews “discovered a theatrical form particularly well suited to representing the complexity of assimilation in America,” as Andrea Most argues.²³ Jewish identity was heralded (or, more typically, subverted) by musical composers and lyricists like Richard Rodgers, Lorenz Hart, Oscar Hammerstein II, George and Ira Gershwin, Leonard Bernstein, and Stephen Sondheim, while many beloved musicals of the mid-twentieth century, such as *Oklahoma!* (1943), *South Pacific* (1949), or *West Side Story* (1957), are often “about” Jews or the Jewish story through a thinly veiled metaphor for Jewish assimilation. This connection runs so deep, according to Most, that “the social reality of being a Jew in America is fundamentally inscribed in the form of the American musical theater.”²⁴ Most argues that the musical stage offered Jewish performers the opportunity to display behaviors more accepted as mainstream, white behaviors, and therefore carved a niche for broader acceptance. “As long as the characters could learn to speak, dress, and sing and dance in the American style,” she writes, “they were fully accepted into the stage community.”²⁵

Mormons gradually moved away from blackface as the century came to a close, though Hicks remarks that the practice continued in part “at least through the 1950s.”²⁶ This parallels the drop-off in depictions of Mormons in musical theater, with negative characterizations all but stopping by the mid-twentieth century, with Lerner and Loewe’s 1951 musical *Paint Your Wagon* sounding the death knell for Mormon musical buffoonery, for a time at least. Lerner and Loewe injected into their story of an almost all-male camp of California miners the polygamist Jacob Woodling and his two wives, Sarah and Elizabeth. The other men demand Jacob sell one of his wives to them, which he eventually does for \$800. In their only musical moment, the Mormon trio

kneels in prayer and the two women offer up for the audience their true feelings about living with a sister wife. Sarah's prayerful murmurings insist "she is no relative of mine" and suggests she will make sure Elizabeth does all the household chores. Meanwhile, Elizabeth's thoughts are more violently antagonistic:

I have some lovely dreams I'm longing to come true;
We're on a lake of ice and Sarah's falling through.
Or else we're on a hill-hop looking at a view;
a happy three are we; suddenly,
Whoops! They're only two.

The scene is humorous, but preys on what had by the time to be seen as archaic and insensitive stereotypes—and provides an uneasy portrayal of female slavery that must have been discomfiting even to audiences then. For all its other problems, *Paint Your Wagon's* sly jabs at polygamous Mormonism seemed out of place by the 1950s, and some productions today downplay or eliminate the Mormon polygamist from the show altogether. In January 1961, NBC Opera Theatre produced Leonard Kastle and Anne Howard Bailey's television opera *Deseret* which once again put Mormon polygamy center-stage. Instead of ridiculing the practice, however, *Deseret* romanticizes polygamy, even portraying Brigham Young as a benevolent prophet and kind husband rather than a sex-crazed tyrant. Rather than force the young Ann Louisa to be his twenty-fifth wife, the sixty year old Brigham Young enjoys a more dignified portrayal; by the end of the opera he instructs Ann Louisa to follow her heart and marry Captain James Dee, the man she truly loves. *Deseret* enjoyed measurable success, with the *Los Angeles Times* calling it "the most expert and convincing opera yet produced by American authors."²⁷

²⁷ Albert Goldberg, "Deseret — A Good Start for Any Year." *Los Angeles Times*, January 2, 1961.

If how polygamy was treated on stage between *Paint Your Wagon* and *Deseret* are indications of America's changing opinion of Mormonism, then by the mid-twentieth century Mormons had successfully pulled off the remarkable transition from polygamist outliers to belonging to what Harold Bloom called "the American religion."²⁸ Even the much-maligned Brigham Young emerges in the mid-twentieth century as an iconic American hero. This transition hinged upon Mormons changing behaviors that seemed unorthodox or otherwise raised suspicions of outsiders. Mormons changed behavior, altered their practices, and demonstrated that they, too, could re-fashion themselves on stage at the expense of those even more despised than them.

But as the Mormon practice of blackface gradually subsided, the Mormon Church took steps to capitalize on the possibilities the musical stage afforded them. As the centennial celebration of the arrival of Mormon pioneers to Utah in 1847 loomed near, the state of Utah—along with the Mormon Church—needed something to shift the conversation about Mormonism away from its checkered past. The story of Mormonism, as state and religious leaders envisioned it, was inherently American, heroic, romantic, and even inspirational. With the nation's attention upon Utah in 1947, leaders knew they had an opportunity to restart the conversation about Mormonism on their own terms. The challenge was to find a medium that could capture the qualities of Mormon resilience and hold them up as quintessentially American, while simultaneously drawing attention away from the religion's unpopular dogma. Musical theater offered them exactly that venue and, with Broadway's unapologetic connection with wealthy white urbanites in the East, also proved providential in affirming the Mormon identity as decidedly white. The state of Utah and the Mormon Church found all they were looking for and more in the musical *Promised Valley*.

Integration

The tremendous success in 1943 of Rodgers and Hammerstein's first collaboration, *Oklahoma!*, caught the attention of people in Utah, who realized the fanciful story of men and women living on the frontier was also their story to tell. It also caught the attention of most theatergoers, who recognized that *Oklahoma!* was doing something other musicals had not done before. Most plots of operettas and musical comedy up to this point were shot through with contradictions and loose dramatic scenarios that by today's standards would seem a jumble of confusion. The often absurd plot lines were merely vehicles for hit songs and flashy dances. Rodgers and Hammerstein sought to build more cohesion into their new musical, and so reportedly worked

to integrate the songs and dance into the story rather than just running alongside the drama. The result was a kind of show whose individual parts all moved in synch to support a singular idea or moral. Or, as Richard Rodgers famously said, “In a great musical, the orchestrations sound the way the costumes look.”²⁹ *Oklahoma!* thus became known as the first fully *integrated musical*—although arguably continuing what Kern and Hammerstein had started in 1927 with *Show Boat*—and established a theatrical standard among musicals that continues to be influential today.

With the popularity of *Oklahoma!* in mind, the Utah Centennial Commission envisioned a new musical as the keystone to the centennial celebrations and immediately set out to create a production on a professional scale never before mounted in Utah.³⁰ The Commission initially approached Kurt Weill to write the music for their new musical; Weill was at the time working with Langston Hughes on *Street Scene* so declined the offer, but suggested the librettist for his 1945 folk-opera *Down in the Valley* (which wouldn’t premiere until 1948), Arnold Sundgaard, as a lyricist. Sundgaard agreed, and, in a risky venture, the Church tapped twenty-five year old Brigham Young University graduate composition student Crawford Gates to write the music in lieu of a big name Broadway composer.

By the time *Promised Valley* premiered on July 21, 1947, it was clear the Utah Centennial Commission, which was chaired by Mormon apostle and future prophet David O. McKay, expected a great deal from the musical. The show ran for 17 performances for an audience of over 104,000 people, at the hefty cost of \$150,000 to the state of Utah—\$20,000 of that spent on the stage alone.

²⁹ Richard Rodgers, *Musical Stages* (New York: Da Capo, 1975), 227.

³⁰ The state’s legislation charged the commission “to commemorate the advent of the pioneers into Salt Lake Valley, to portray fittingly the natural resources and scenic wonders of Utah, the prehistoric culture of the west, the development of irrigation, farming, mining forestry, transportation, culture and the arts.” Quoted from “Utah Centennial Commission (1947),” Utah Department of Administrative Services Division of Archives & Records Service, <<http://archives.utah.gov/research/agencyhistories/180.html>> (Accessed August 8, 2016).

Perhaps because of the immense costs of the production, at every corner the Commission looked for opportunities to gain national attention by drawing a connection between their state and icons of other big cities. This was no different with the outdoor stage. A bowl, similar to that built in 1929 in Hollywood, was placed at the end of the football stadium at the University of Utah to accommodate the state-of-the-art equipment (“a new stereophonic sound system, unsurpassed even by that at the Radio City Music Hall, New York”)³¹ needed for such an enormous outdoor production. The amphitheater design worked well, with only one performance cancelled because of rain, and the University of Utah was allowed to keep the bowl to be used in future productions.

The critical response to *Promised Valley* was immensely positive. “The most elaborate music-drama ever presented in this intermountain region,” boasted the *Salt Lake Tribune*.³² Another review recognized in *Promised Valley* the story of bravery and heroism the Centennial Commission hoped would be the new legacy of Mormonism: “When fatigue undermined courage, when fear bordered on paralysis, and when even the stoutest hearts had doubts, one thing—music—seemed always to beat back a final hopelessness that threatened a pioneering people.”³³ A week later, journalist Lowell M. Durham wondered excitedly what was coming next for the region: “Pasadena has its ‘Parade of Roses’ and New Orleans’ annual ‘Mardi Gras’ festivities attract worldwide attention each year. Salt Lake City might well become famous as the site of the world’s greatest outdoor musicals.”³⁴ While the city did not become known worldwide for its outdoor musicals, Salt Lake City did continue the legacy of *Promised Valley* when, in 1972, the Mormon Church converted an old movie theater in

downtown Salt Lake City to use for church plays, renaming it the Promised Valley Playhouse. It closed in 1996, though the Church replaced it in 2000 by including a 911-seat theater in the plans for the new Church Conference Center. A shortened version of *Promised Valley* also played for tourists in downtown Salt Lake City's Temple Square every summer for eighteen years.³⁵

Because of the publicity surrounding Rodgers and Hammerstein's enormous success, everyone involved in *Promised Valley* stood to benefit from connecting their show to the new, integrated style of *Oklahoma!* For the lead role of Jed Cutler, the Commission hired Alfred Drake—a deliberate if not heavy-handed attempt to siphon some of Drake's notoriety as the first Curly McLain—and Hollywood starlet Jet McDonald to play opposite Drake as Celia Cutler. Jay Blackton, who was the original musical director of the Broadway production of *Oklahoma!* and conductor of Irving Berlin's 1946 musical *Annie Get Your Gun*, was also hired to music direct *Promised Valley*, and celebrated dancer and choreographer Helen Tamaris, also coming off her success the year before with the premiere of *Annie Get Your Gun*, was brought on as choreographer. The degree to which professional talent was brought in to work with local actors and dancers mirrors closely the way in which professional pageant masters in the first decade of the twentieth century—men like William Chauncy Langdon—were hired by small Midwestern or frontier communities to help put on pageants celebrating their region's unique history in order to better define future goals.³⁶ The publicity for *Promised Valley* also pushed the connection to *Oklahoma!*, mentioning Drake's connection to the Broadway show in large print in almost every poster (Figure 2.4).

³⁵ *Promised Valley* has maintained a lasting legacy within Mormonism. In 1961, the Mormon Church commissioned "a simplified version of the choral parts, resulting in worldwide performances of both versions in six languages on five continents." Some members of the Centennial Commission also urged Gates and Sundgaard to include a new state song in the show—another nod to the place of honor the musical *Oklahoma!* would occupy in the state of Oklahoma. Evidently, the plan was to create a Utah state song from an existing melody Gates had already written for *Promised Valley* and incorporate that into the musical. Sundgaard and Gates went back and forth about it, with Sundgaard not wanting to distort the story “just to get a state song.”³⁷ Nevertheless, in a letter to Gates dated April 20th, Sundgaard refers to a group of lyrics he called “Home in Utah” that was to appear at some point after the “Choir Practice Song,” and then be featured in a full reprise in the epilogue. There is no record of Gates’s response to Sundgaard’s last letter, and the slight changes Sundgaard had suggested to make room for “Home

in Utah” were ignored in the final production, indicating that the plans for the state song evidently were dropped.³⁸ Ironically, the title song that in 1953 was adopted as Oklahoma’s official state song and apparently was the inspiration behind Utah’s state leaders seeking something similar in their own musical, almost didn’t make the cut. It was not part of *Oklahoma!* during pre-New York try-outs but was added later to consolidate the reconciliation among the story’s warring factions of Indian Territory: the farmers and the cowhands.

In hindsight the Commission’s wagon-hitching to *Oklahoma!* seems vexed. Even though *Oklahoma!*’s integrated technique has since colored the musical as a watershed in American musical theater, the historiographic prominence *Oklahoma!* enjoys has recently been revealed to be the result of a carefully crafted publicity stunt. Musicologists James O’Leary and Tim Carter both position *Oklahoma!*’s reception within the economical constraints of its producers, The Theatre Guild, who needed some assurance of the show’s success in the face of mixed reviews during try-outs. Novelty would sell tickets, it was determined, so the creative staff and the show’s producers began weaving a careful story of how *Oklahoma!* would be the first musical to integrate song, dance, and drama, despite evidence that what was being called integration was really nothing new. O’Leary writes that,

the term was deployed as part of a finely honed, performative act of cultural positioning; more a term of highly charged persuasive rhetoric than an objective, analyzable, or ineluctably ‘real’ part of the work. The term became a rhetorical emblem

³⁸ Gates evidently attempted to write the lyrics to a state song on his own, which Sundgaard rejected out of principle. “My feeling was that it would be confusing to say that it came out of the play. The melody does but the words don’t and if people got familiar with those words in advance i[t] would puzzle them to [hear] that melody sung to different words in the play. . . . If your words would fit into the play it would be different but I’m quite sure they won’t.” Arnold Sundgaard to Crawford Gates, April 17, 1947. Crawford Gates Paper, L. Tom Perry Special Collections, Brigham Young University.

of sophistication, deployed as part of a public-relations strategy that sought to attract or dissuade certain segments of the general theatergoing crowd.³⁹

It seems, then, that the kind of hopeful qualities of *Oklahoma!* as the vehicle through which integration would come for Mormons was built upon two well-played publicity strategies. The Centennial Commission hoped the Broadway show would bolster the success of *Promised Valley* as the latest incantation of the famed “integration technique”; likewise, The Theatre Guild had manipulated *Oklahoma!*'s legacy by selling integration as a novelty. No harm, no foul, perhaps, since both parties got what they wanted: getting on the good graces of the rest of Americans for one and financial solidarity for the other.

In spite of the integration ruse, Sundgaard attempted to cash in on the trend, telling reporters that he “found it was necessary to use every form of drama” to tell this particular story “as it should be told. . . . The spoken word and dramatic situations were not enough—integrated drama, music, and dancing were also needed.”⁴⁰ Journalists in turn gleefully reported that *Promised Valley* would feature the latest fashions of Broadway: “The drama of Utah pioneers, written by New York playwright [sic] Arnold Sundgaard, will follow the ‘integration’ technique of ‘Porgie [sic] and Bess’ and ‘Oklahoma’ in that dance and song will be integrated in plot action.”⁴¹ Others were less convinced the connections between the two musicals were that manifest. “There will be a natural tendency to compare ‘Promised Valley’ with ‘Oklahoma!’ since both salute this western land, and both feature the same principal vocalist,” wrote the *Salt Lake Tribune* on July 26th. “Each has the same good humor, the same honest ‘folk-art’ quality, plus a strong similarity in choreographic style. But the

Broadway presentation was more certainly a musical comedy, while ‘Promised Valley,’ dealing in its first act with a serious subject, for a time took on the aura of a folk-opera.”⁴²

So entrenched was the association between the two musicals that, even by 1994, Mormon historian Davis Bitton still maintained that *Promised Valley* “combined words and music in the manner of Rodgers and Hammerstein.”⁴³ Yet the reviewer’s likening to folk-opera was adept, for despite all the publicity and alertness to *Oklahoma!* as the model, Crawford Gates’s music for *Promised Valley* bore little resemblance to that of Richard Rodgers. Instead, Gates’s score is more comparable to the folk-opera lyricism of Kurt Weill. This can most readily be heard in Jed Cutler’s opening number, “Valley Home.” The tune bears some resemblance to Kurt Weill’s song “My Ship” from his 1941 musical *Lady in the Dark*, both in melodic structure and lyrical message (see Examples 1 and 2). Gates knew he was the Commission’s second choice after Weill, and perhaps modeled some of his tunes after the master, or perhaps Sundgaard’s association with Weill influenced Gates’s song structure. Whatever the reason, the contour of the melodies is similar, as is the climax of both songs (see Examples 2.2 and 2.3). Even the cadential extension in the coda in “Valley Home” is colored by a dip from F major to D-flat and finally back to F major, just as it does in “My Ship.” This same cadence appears in Celia’s song “The Wind is a Lion” and in several of Jed and Celia’s duets, and in fact seems to be a harmonic thread connecting the show’s otherwise disparate musical styles.

Lynn Riggs’s play *Green Grow the Lilacs* (1930) was also called a “folk-opera,” and, as the source for Rodgers and Hammerstein’s *Oklahoma!*, may in fact be where Goodman and others saw the comparison.

Example 2.3:

Liza's vocal line in "My Ship," from *Lady in the Dark* (1941). Music by Kurt Weill and lyrics by Ira Gershwin.

The musical score for "My Ship" is presented in three systems. The first system, labeled "Liza", shows a vocal line in common time with lyrics: "I do not care if that day ar - rives, That dream need nev - er be, If the ship I sing does - n't". The second system, labeled "L.", shows piano accompaniment with lyrics: "al - so bring my own true love to me, If the ship I sing does - n't al - so bring my own true love to". The tempo marking "allargando" is placed above the piano part. The third system, labeled "L.", shows piano accompaniment with lyrics: "mc." and a fermata over the final notes.

The connection between Weill's musical and Gates's musical is even more of a mystery when considering the way both shows treat the power of the human voice. *Lady in the Dark* tells the story of Liza, a fashion editor for a magazine who is undergoing psychoanalysis to cure her depression. She continuously hears snatches of a song she learned as a child, but she can't recall it in its entirety, nor can she remember what the song is. The song comes to her in full at the end of the

show after she discovers her psychological block stems from her being compared unfavorably to her mother's natural beauty. In the song, "My Ship," Liza "sings" her love to her:

I do not care if that day arrives
That dream need never be,
If the ship I sing doesn't also bring
My own true love to me.

In *Lady in the Dark*, singing therefore is equated with emotional health and a true, perhaps hidden self, within. This isn't all that different from the community's value system in *Promised Valley*. Similarly, in "Valley Home" Jed dreams of a place where he and his wife Celia can settle down. The dream includes green fields where he can "work in its fields all the day." Most significantly, the first verse ends with his pronouncement "I *sing* that we're going that way"—an odd choice of words when perhaps "hope" or "pray" would seem more fitting. Jed anticipates the reality of a future home for his family through his ability to "sing" that it will happen. "Valley Home" is Jed's first featured number, so it seems important that audiences learn immediately that Jed, the hero of the story, is one who sings—and who is therefore recognizably a part of the community. Liza and Jed, like the rest of the Mormon community, both believe in the magical power of singing to connect them with their dreams—which more generally speaks to the influence of psychoanalysis at the time, in that the sub-conscious can use the voice to communicate what the visible self cannot. The similarity of the melodies and message helps amplify and deepen Jed's character, placing his identity firmly within a dramatic conversation happening on Broadway (and indeed in psychiatric offices around the world) at the time. Even more, Gates's music amplifies the message of *Promised Valley*: to sing is to belong.

“The Mormon folk are singing”

The story of *Promised Valley* celebrates vocality as what unites the tight-knit Mormon community. The show begins with Jed Cutler singing on stage alone, perhaps another nod toward Curly’s famous off-stage entrance singing “Oh, What a Beautiful Mornin’” at the top of *Oklahoma!* (which is in turn how *Green Grow the Lilacs*, Lynn Riggs’s 1930 play that Rodgers and Hammerstein modeled their show after, also begins). Jed and his wife Celia are temporarily stopped in Winters Quarters, Nebraska, along with their wagon train of fellow Mormon pioneers, as they wait for the icy ground to thaw. Celia longs for a place to call home, listening in to the song of the robin to signal spring’s arrival and the journey west to continue. Jed hopes for a green valley for him and Celia to raise a family.

The plans are disrupted, however, when on the day the wagon train was to move out, a captain in the U.S. Army arrives to recruit most men from the outfit for the Mexican-American War. They are to march down to Santa Fe and onward to California, where they will then join the rest of their company. As Duncan Emrich wrote in 1952, however, the term “California” was simply a placeholder for Mormon pioneer’s final destination because, “to the early Mormons moving westward anything beyond the Rocky Mountains was termed ‘California.’”⁴⁴ Swayed by the modest Army salary, Jed reluctantly joins what became known as the Mormon Battalion. Celia continues with the rest of the party west, hiding her pregnancy from her husband as he leaves.

The Mormons eventually stop in the Salt Lake Valley, its barren soil and harsh conditions sitting uneasy with many in the company. Nonetheless, the Mormons fall in rank and begin developing the land and building their homes. Soon after, Jed and the rest of the Mormon Battalion arrive in Utah to join their families. After having seen the fertile and green valleys of California,

⁴⁴ *Songs of the Mormons and Songs of the West*, From the Archive of Folk Song, ed. Duncan Emrich, Library of Congress, 1952.

though, Jed wants to continue there to raise his family in the “valley home” he had once sung into existence. Celia convinces him to stay and honor their commitments to God and develop the land given them. The show ends with a triumphant choral reprise of Jed’s opening number “Valley Home”: “We pushed out across the prairie, / We walked across the plain, / And here we’ve found our promised home, / And forever we will remain, remain. / Our thanks be to God again!”

Singing is emphatically conveyed in *Promised Valley* as a symbol of community. In “The Upper California,” a choir sings “the Mormon folk are singing, their songs will reach the sky.” The Mormon community anticipates a great triumph in “the upper California” region, indeed a total dominance over the land. Audiences know that the Mormons eventually do arrive in the mountain west (this was a celebration of Utah’s centennial, after all), so singing becomes tied to prophetic prescience and comes to represent the community’s ability to work together to fulfill that prophecy. Later, the ensemble sings “we’ll make the air with music ring, / Sing praises to our God and King” in an arrangement of the popular Mormon hymn “Come, Come Ye Saints,” another song celebrating the arrival of Mormons in the Salt Lake valley.

It is significant that the ensemble features so prominently in this show; indeed eleven of the musical numbers in *Promised Valley* are for chorus, including one explicitly called “The Choir Practice Song.” Given the framing conceit of the show, that “to sing is to be Mormon,” this song demonstrates how the people become a community through singing together, and almost serves as a primer for building community solidarity. Choir members, here understood as a simulacrum for the larger community, pronounce all the rules of belonging: “never be late” because “the chorister’s eager to lead in our singing” so their “hymns will be reaching to the skies.” The song hints that romantic relationships are made in choir practice, and new members are encouraged to “please take it slowly and you’ll get it perfect.” Choral singing had been a staple of Mormon culture from its inception. Joseph Smith’s wife Emma was directed through her husband’s revelation in 1830 to

compile a book of “sacred hymns . . . For my soul delighteth in the song of the heart; yea, the song of the righteous is a prayer unto me, and it shall be answered with a blessing upon their heads.”⁴⁵ Choral singing soon became a regular and prominent part of Mormon worship. This fact alone made Mormonism stand out, as Michael Hicks has pointed out in his history of The Mormon Tabernacle Choir, since for most churches in Joseph’s time, angelic choirs were the only choirs expected to be heard on earth, and only occasionally—“earthly choirs were a transgression,” he writes.⁴⁶ *Promised Valley* cashes in on the rich legacy of Mormon choral singing by showing collective vocality is a representation of American grit.

The Mormon Tabernacle Choir stands at the pinnacle of choral spectacle and popularity in America today, and at the time was quickly gaining prominence as the centerpiece of the radio program *Music & the Spoken Word*, which has been broadcast continuously on radio since 1929. Dubbed “America’s Choir” by Ronald Reagan, The Mormon Tabernacle Choir has become something of a *de facto* cultural ambassador for the Church. Because of its wide reach, The Choir’s repertoire has been a source of ongoing conflict, according to Hicks’s research, with one side trying to maintain the Choir’s legacy with strictly sacred hymns and another side vying for the kind of commercial popularity that would bring wider attention to the Church and, presumably, better fill the Church’s coffers. Unsurprisingly, in the 1960s, there began to be some stirrings for the Choir to make an album of Broadway songs. Although the Mormon prophet Joseph Fielding Smith had once declared in an interview that “I don’t think the Salt Lake Tabernacle Choir belongs on Broadway,”

during his presidency in 1971, the Choir released an album of Broadway show tunes called *Climb Every Mountain*.⁴⁷

In the 1940s, however, collective singing represented a kind of discipline and patriotism as the country struggled to define itself against global powers. A disciplined voice, to the ears of many, signaled a disciplined and united country. Scott A. Carter explores how America's "voice culture" became of central concern during the late nineteenth and early twentieth centuries. From roughly 1880 to 1920, America's "voice culture practitioners" attempted to "establish an ideal singing aesthetic capable of representing the nation-state."⁴⁸ This concern over controlling the sound of America was an implicit reach into the governing of the human body. Because the voice has a physical and material connection to the human body, any disciplining of the vocal sound is likewise a disciplining of the body in which the vocal apparatus is housed. Unrefined voices of African Americans or immigrants from Asian and European countries were heard as "particularly vexing" to the ears of vocal aesthetes. Carter writes, "These Other voices posed for the cultured elite an aural and physical threat to what was perceived as a fragile national culture by transforming urban soundscapes into polyvocal communities beset with racial and cultural tensions."⁴⁹

Promised Valley's attention to disciplined, choral singing therefore comes not long after a period of great concern for how the collective body of the nation sounded. If becoming American depended to some degree on sounding American, then *Promised Valley* helpfully pointed to Mormons as exemplary citizens. To further distance themselves from a perceived ill-refined sound of racial or ethnic minorities, Mormons could demonstrate a concern with vocal discipline and establish a legacy

of beautiful singing in their communities. Furthermore, the communal goals of choral singing match the communal spirit of early Mormonism, where a form of wealth distribution was practiced until railroads crisscrossed Utah and more stringent capitalist practices quickly rendered the struggling communal economies outmoded. The original name for the state of Utah was Deseret—a Book of Mormon word that means “honeybee.” The symbol of the beehive remains on Utah’s state flag and, like the practice of choral singing, continues to inform Mormon understandings of thrift, industry, and prosperity. *Promised Valley* adamantly promotes the Mormon work ethic. As one character in the show notes, “Everyone has a job to do here. I have a job. You have a job. We all have a job. Jobs create order in the human family. Without order we lose our meaning.”

Chorus thus comes to represent Mormon industry and cooperation, a simulacrum of Mormon community. The main characters come to be identified through their willingness and ability to “sing” in harmony with the rest of the community. Jed’s identity as a model Mormon is confirmed by his willingness and ability to sing, as is Celia’s. The oddball and comic character Fenelly Parsons, on the other hand, has a different relationship to music, which signals his outsider status. Fenelly is a widower burdened with eight sons he struggles to feed. His buoyant music, however, betrays his true ethnic identity. While Fenelly does indeed sing in the show, his action on stage is always musically exoticized by Scottish snaps which, as Michael Pisani has argued, is the same musical language used to characterize an exotic Other throughout stage and film music.⁵⁰ The frequent frills and grace notes that accompany his music and stage action are examples of such exoticism.

In “Golly, I’m Glad to be Alive,” Fenelly reveals that he once was a piano tuner and could “make the music sweet.” Yet he now finds the back-breaking work of farming too onerous a

responsibility, sarcastically singing that “golly out in Utah I’m glad to be alive. Oh, the life that we live here is great.” Unlike the other characters, who embrace difficult conditions as confirmation of their faith and place in the community, Fenelly sees music as a luxury and can’t find a way to reconcile a life filled with both music and hard work. Although still a Mormon, Fenelly is conveyed musically as an outsider—while he does “sing” as a character in the show, his inability to sing as part of the community renders him socially mute. All he can do is begrudge his particular life struggles, committing a fundamental frontier (and Mormon) sin of considering the individual’s comforts over the community’s well-being. His outsider status is confirmed by his “ethnic” musical accompaniment in both “The Cushioned Seat” and “Golly, I’m Glad to be Alive.”

It may also be that Fenelly cannot “sing” because he lacks a wife. In Mormon culture, to be single marks someone as an outsider; to stray from the nuclear, hetero-normative family dynamic is to walk the delicate bounds of Mormon acceptability. As a rule, a family must have husband and wife, and since Fenelly has no wife he therefore cannot be completely integrated into the community. This reflects a Mormon policy that would not have been in effect during Fenelly’s life. When polygamy was finally disbanded in 1907, the Church shifted focus away from marriages as *plural* to marriages that were *celestial*—a clever choice of wording that allowed Mormons to give up plural marriage as a temporal principle while still maintaining its practice and belief as the order of heaven. Since the Mormons had been in Nauvoo, the temple ceremony had taught that families could be bound together as units in the hereafter, and that those units were bound within “celestial marriage.”⁵¹ By retaining the same wording, Mormons left a back door open for polygamy to be reinstated at a future date. Nonetheless, the Church’s emphasis on family was much more palatable than rhetoric about polygamy, and therefore widely accepted and respected by Protestant America in

⁵¹ Celestial marriage is also referred to as “the new and everlasting covenant” in D&C 132.

the mid-twentieth century. Today, monogamous Mormon families are sealed together in temples as celestial families, still abiding by the principles that once governed plural marriages.⁵²

In contrast to Fennely's outsider status, the romance between Jed and Celia is portrayed as a successful attuning, one to the other's voice. They sing that "love is their song" and "the music of our love so true will always be strong." In everything they do, whether in rising from bed or working in the fields, they sing love. Their relationship is built from the same principle Isaiah wrote of when he considered the voices of God's special witnesses: "with the voice together shall they sing: for they shall see eye to eye, when the Lord shall bring again Zion."⁵³ This supports what we already knew about Jed and Celia—that by singing they affirm their commitment to the community and show their willingness for hard work. The four duets between Jed and Celia confirm that we ought to understand their relationship through song, since we hear them sing together far more often than we do alone. Their tuneful companionship is best illustrated in "Love is Our Song," when Celia admits they "ev'ry song I sang, I sang for you," and asks Jed if he could hear her singing while he was away from her.

It is a common conceit that musicals are endowed with an overblown optimism. This may be cause for much ridicule, but musicals need optimism to enable individuals and communities to define, rediscover, and then reimagine their respective identities when any form of conflict arises. Raymond Knapp calls such easy reconciliation the "marriage trope"; in musicals there are "couples whose individual issues mirror or embody larger ones that turn out to be what the musical in

⁵² There is also an argument to be made that all marriages performed inside Mormon temples are celestial, so that celestial marriages do not necessarily mean plural marriages, but it also does not preclude plural marriages from being sanctioned.

⁵³ Isaiah 52:8.

question is ‘really’ about.”⁵⁴ Sometimes this technique involves a literal marriage, as is the case with Curly and Laurey in *Oklahoma!*, whose union serves as a metaphor for reconciliation between farmers and cowhands. Other times the marriage is implied or denied, as with the failed union of Tony and Maria in *West Side Story*, which nonetheless prompts both respective communities to strive for peaceable reconciliation. *Promised Valley* features none of these. Though they are forced to spend time apart while Jed serves in the Mormon Battalion, Jed and Celia’s union was never really threatened, nor does their relationship represent a “marriage” between two opposing forces, since they were married before the action of the musical begins. They are both Mormons and both coming to terms with the destiny of their people and their places within that new world. The tension in the musical is therefore the effect of their union, and not the cause of it.

If we look beyond the confines of the actual musical, however, there is a real life marriage trope that *Promised Valley* helps bring about: a reconciliation between Mormonism and America. After decades of living on the fringe of American life, postwar Mormons actively sought out ways of assimilation. *Promised Valley*, Mormonism’s true entree into musical theater, seems well-timed and purposely designed to show Mormonism’s good faith in core American enterprises—hard work, community spirit, devotion to the land, family, and, of course, the thoroughly American institution of musical theater. Previous displays of Mormons in popular culture, including musical comedy, were antagonistic, mocking, and exploitative. *Promised Valley* disrupted those conventional images of Mormon faith and life by emphasizing beloved American work ethics inscribed within Mormon vocality. Furthermore, the show played up the conventions of singing in musicals. If in musical theater to sing means to belong, then *Promised Valley* was an opportunity to prove that Mormon’s

belonged, by establishing their mastery over the style and conventions of America's home-grown theatrical genre.

Conclusion

By the mid-twentieth century, Mormonism had finished on top in a long journey of self-reinvention. Mormons across the country filled academic posts, held prominent and successful positions in business, and were employed at the highest levels of state and national government. There was even a Mormon appointed Secretary of Agriculture under the Eisenhower administration. By sidling up to musical theater, the Mormon Church helped change the image of Mormons from untrustworthy bandits to exemplary Americans. They also successfully reattached themselves to the narrative of whiteness, emboldened by musical theater. The Mormon "aspiration toward whiteness" came at a price, however, as the path the rest of the country was on shifted beneath Mormonism's feet. Understandings of race were shifting radically away from those held in the nineteenth century, yet Mormons continued to emphasize behavior determined by increasingly out of date notions of whiteness. Mormons overshot their mark, becoming in turn too white, their devotion to musical theater too strong; the resulting Mormon affinity for optimistic, unrealistic, and privileged conventions or assumptions of so-called "Golden Age" American musical theater could easily be mocked. Oscar Hammerstein's defense of his work's optimism might easily describe Mormonism of the twentieth century: "I don't deny the ugly and tragic—but somebody has to keep saying that life's pretty wonderful, too. Because it's true. I guess I can't write anything without hope in it."⁵⁵ When Trey Parker and Matt Stone set out to portray Mormons in their 2011 Broadway hit *Book of Mormon*, they easily drew the connection between Mormons, the musicals of Rodgers and Hammerstein, and

Chapter 3

Exoticized Voices, Racialized Bodies:

Lineage and Whiteness on Stage

“Hearken ye people from afar; and ye that are
upon the islands of the sea, listen together.
For verily the voice of the
Lord is unto all men.”

Doctrine and Covenants 1:1

Musical theater helped solve the assimilation problem Mormons faced in the first half of the twentieth century. Mormons showed they could adapt themselves to the styles and conventions of white America through the styles and conventions of middle-class America’s cultural surrogate—musical theater. Even polygamous factions of the Church found musical theater a helpful vehicle for navigating their complex American identity; one polygamous community retooled *The Sound of Music* as a piece of religious propaganda. Yet the mainstream Church’s new-found acceptance would need to be guarded in the ensuing years. Following the enormous success of *Promised Valley*, the Mormon Church looked continually to musicals to help define Mormonism as its membership grew substantially in the second half of the century. The political and theological benefits of musical theater had become apparent to Mormon leaders; by the 1960s, musicals figured into almost every aspect of Mormon life.

In this chapter, I focus on how Mormons used musical theater to define the boundaries between and among various races of people both within and outside of Mormonism. This is not without some irony, since as we explored in the previous chapter, Mormons were brutally degraded

as ethnic minorities through the musical stage, and now were resorting to using musical theater as a means toward similar racial categorization. With the complex Mormon understanding of lineage and race, Mormons took to musical theater to frame a world where musical theater performances signaled a people's identity as "white" within the Mormon racial hierarchy. By allowing certain groups the opportunity to voice whiteness through the conventions of musical theater, Mormons reimagined the genre as a tool to transform some minority members into exemplars of whiteness.

Mormonism's long and tenuous relationship with race in the United States undoubtedly contributed to the impulse to cleanse racially through musical theater. By the time the group immigrated to Utah in 1847, Church leaders had put in place a racial policy that prevented black men from being granted the priesthood. Church officials stringently maintained the racial policy. Yet, when Mormon missionaries first sailed to the Sandwich Islands and found success converting the natives, the dark skin of the Polynesians betrayed their actual lineage (at least to the missionaries) as remnant of the House of Israel. Like Native Americans, but unlike blacks, Polynesians were eagerly welcomed into the Mormon ranks.

Mormon policy depended on an easy racial categorization of members and prospective members, which goes a long way in explaining the ensuing decades of racial ambiguity, racist policies and practices, and blatant musical exoticism of the racial Other within Mormonism. It isn't so much that Mormons are particularly racist or culturally insensitive; rather, Mormons have always been prone to synecdochic allusions to America as a whole. The hills and valleys of America's cultural and social landscape are inscribed on the Mormon body, and it is this contested body—one that both needs to identify with but also separate from mainstream American ideology—that is the subject of this chapter. Inasmuch as the faithful Mormon has always been a performing Mormon, I show how the theater became a helpful venue for performing Mormon racial policies. Using the evening shows

It is difficult to ignore a link between the Mormon interest in a theatrical story about Polynesians and other musicals with similar themes. Rodgers and Hammerstein had already explored American values in *South Pacific*, *Flower Drum Song*, and *The King and I* in the years preceding the cultural center's opening (Figure 3.2). In all three Broadway shows, race was treated forthrightly, if not haphazardly. For example, despite Lieutenant Joe Cable's conviction that "you've got to be carefully taught" to have racial prejudice, Rodgers and Hammerstein fail to depict the Polynesians in *South Pacific* with much dignity or respect. Similarly, *The King and I* moralizes a world where Western imperialism is celebrated, even as it inoculates Siam from its traditional moorings. Anna Leonowens's European values (conveniently standing in for American values in the musical) prove too much for King Mongkut, who struggles to keep up with modernity and creeping Western influences in his country. When it becomes apparent to the king that he will never be able to assimilate into Western ways, he dies of a broken heart.

skinned Polynesians indicate a conversion to Mormonism by displaying whiteness through musical theater. If some audiences hear whiteness in the sounds of the Polynesian performers, then we must assume that they too find easy association between Mormonism, musical theater, and seeing on display what are presumed to be white values.

The Church didn't stop with the Polynesians; musical theater was used to perform chosenness in others as well. In 1971, Brigham Young University professor Jane Thompson founded a performing ensemble called "The Lamanite Generation." The group of Native American, Polynesian, and Latin American students, which continues to perform today under the name "Living Legends," toured the United States and other parts of the world throughout the 1970s and 80s, performing songs and dances that reflected their heritage in a theatrical manner. The song and dance routines of "The Lamanite Generation" helped reinforce the narrative of colonialism, using the bodies and voices of non-white performers as emblems of Mormonism's newly-established role as purveyor of white domination. Furthermore, as can be seen in the album cover pictured below (Figure 3.2), neither "Lamanite Generation" nor its leaders attempted to authentically represent Native Americans or any other real ethnic group. Rather, the performers mimicked what had by that point become easy racial stereotypes firmly entrenched within American popular culture.²² Thus performing musical theater became a convenient way for certain dark-skinned Mormons to erase racial heritage by acting white. If a person's heritage revealed her to be "chosen," then she could perform away her actual racial identity and affirm a sense of surrogate whiteness by performing on the musical stage.

Brigham Young once said, “If I were placed on a cannibal island and given the task of civilizing its people, I should straightway build a theatre.”²³ It took over one hundred years for it to happen, but the Mormon Church eventually followed through with Young’s idea. While the Hawaiian tourist industry encompasses much more than its Mormon connection, the prominence of the Polynesian Cultural Center within Hawaiian tourism highlights and exacerbates contentious Mormon understandings of race. And finally, as Brigham Young’s statement attests, the transformative power of the stage is very real, very tangible for Mormons. By presenting Polynesian culture as a Broadway-style musical drama, the Mormon Church uses the musical stage to forge a connection between the dark-skinned Polynesian people and white-skinned Mormons living in the

United States—making evident through performance the hidden qualities of whiteness within the Polynesians. Inasmuch as *Promised Valley* stages the remarkable story of Mormon pioneers, the shows at the Polynesian Cultural Center likewise offer a similar musical and dramatic connection between Mormons and the history of the Polynesian people. Hidden slyly behind the Mormon conception of chosenness rests the racial purposes and intentions that uphold that conception. Far from just being an innocuous venue for frills and campy humor, musical theater thus helps Mormons categorize their complex world of racial identity, and, as the remainder of the chapter illustrates, allows some to feel a connection to broader American values—the soft lullaby of old Broadway becomes in the mouths of the dark-skinned performers a sure way of becoming white, even if in sound only.

Mormons and Jews

You can scarcely hear from all the screaming. It is 1974, and five men wearing pastel colored polyester suits shimmy and snap fingers to a groove provided by an on-stage band. All smiles and energy, the men singingly yearn for riches and women—and women there were. The Dionysian frenzy of screaming teeny-boppers erupting in front of and below the stage could scarcely have thwarted the performance however. The band backs up the tight, chromatic shifting of their front men as they happily soak in all their devotion—testimonies to a truth this audience believes in mightily. These particular songs, of course, are not about vindications of religious truthfulness. Not like this. And these performers—these five men—are in truth mere placeholders for any available version of the male celebrity body capable of enraging the hormones of a room crammed with young women. The truth of this moment rests not with the singularity of the music or the performers but rather with the relative ease with which both are synthesized as cultural products.

These five men are pop icons, but they also happen to be Mormon, and the songs they sing are pop songs, but they happen to be about a Jewish community on the verge of extinction. If this cultural mishmash seems unlikely or perhaps a little too tidy, maybe it is. To be fair, the brotherly act of The Osmonds and the hit musical *Fiddler on the Roof* probably should not be seen as entirely representative of the faith traditions out of which they emerge. Still, this moment of cultural collision—Mormon brothers singing a medley from *Fiddler on the Roof*—does point to a curiously remarkable site of common ground both faith traditions share: the musical theater stage.

In significant ways, Jewish identity is deeply woven into the fabric of musical theater and its history. Yiddish theater, as some scholars have argued, may have provided the fertile ground and cultural fervency that allowed musical theater to take root among the increasingly diverse urban American communities; in this interpretation, Yiddish theater serves as the genesis of a distinctly American musical genre. If the Americanness of musical theater rests on its Jewish beginnings, the disempowered social place of Jews in nineteenth century America hardly bespeaks that significance. As Andrea Most has argued, however, perhaps it was precisely that position as outsider that empowered musical theater with a distinct American flavor of resiliency.

Indeed, the experience of being an outsider—even one not explicitly Jewish—comes to be defined by a narrative trajectory from exclusion to acceptance, a trajectory codified by Jewish writers of musicals. For all sorts of outsiders, the way to become American is, in other words, a Jewish way, and those who follow that path perform—wittingly or unwittingly—a Jewish story, which is to say, an American story, indeed *the* American story.²⁴

²⁴ Andrea Most, *Making Americans: Jews and the Broadway Musical* (Cambridge, MA: Harvard University Press, 2004), 3.

And join them one to another into one stick; and they shall become one in thine hand.

And when the children of thy people shall speak unto thee, saying, Wilt thou not shew us what thou meanest by these?

Say unto them, Thus saith the Lord GOD; Behold, I will take the stick of Joseph, which is in the hand of Ephraim, and the tribes of Israel his fellows, and will put them with him, even with the stick of Judah, and make them one stick, and they shall be one in mine hand.²⁶

To Mormons, the “stick” of Judah is the Bible, and the “stick” of Ephraim The Book of Mormon. The Book of Mormon, which is an ancient text Joseph Smith purportedly translated by the power of the Holy Spirit, begins with the story of a prophet named Lehi, a contemporary of Jeremiah, who, upon seeing a vision of impending destruction, fled Jerusalem with his family, eventually sailing over the sea to the American continent. Righteous descendants of Lehi were commanded to write down revelations and experiences on brass plates that they carried with them; these brass plates, which traveled with these ancient Americans over the course of several thousand years, are what Joseph Smith found buried within a hill near his home in Palmyra, New York. The text makes it clear that Lehi descended from the tribe of Manasseh—the brother of Ephraim—yet, historically, Mormon leaders have taught that the coming forth of The Book of Mormon as the “stick of Ephraim” signals that the time has come for Ezekiel’s prophecy to be fulfilled.

Mormons, therefore, see Jews as distinctly different from the rest of the world. Perhaps even more confusing, the Mormon concept of the “Gentile” as anyone not Mormon also strips Jewishness from actual Jews. Sociologist Armand Mauss has argued that the evolution of Mormon

²⁶ Ezekiel 37:16-19.

women not to adhere to the “idiotic and blatantly false philosophy” of women’s liberation. “Error, sin, lust, envy, and evil thrive in the midst of today’s prosperity,” Monson writes.

More than \$5 million a year is spent on pornographic literature by which vile men try to “dig gold out of dirt.” Magazines, movies, television programs, and other mass media are utilized to lower moral standards and behavior. Crime and delinquency are rampant, and spiritual values are questioned. Our interests are centered in ourselves. We are preoccupied with material things. Many of us are more concerned about conquering space than about conquering ourselves. We are more dedicated to material security than to inner purity. We give much more thought to what we wear, what we eat, what we drink, and what we can do to relax than we give to what we are.³⁰

Monson coolly shifts this litany of moral deprivations into a discussion of prescribed gender roles, roles that Mormons consider eternal and divine. After citing an exchange between columnist Ann Landers and a disgruntled mother who would rather give her son up for adoption than quit smoking the cigarettes that are causing her son’s breathing difficulties, Monson responds, “Have such mothers become liberated? Have they achieved freedom? Equality? No. They have not been liberated. They have been deceived.”

The rhetoric takes a curious turn here, as Monson introduces *Fiddler on the Roof*’s Tevye the milkman as an addendum to his council.

One of the fine musical comedies of recent years is Joseph Stein’s *Fiddler on the Roof*. This tells the story of an old-fashioned Jewish father in Russia who is trying to cope with changing times brought forcibly home to him by his beautiful teenage daughters.

prior to the song, Inez and Maurice had been discussing a compromise between their differing religious viewpoints. Inez counters Maurice's doubts with the line, "It's the people who divide themselves. Don't blame God again! This life is ours...it's what we make it." Maurice hears in her words the same counsel the Rabbi once gave him, and realizes that "life itself has taught me that you and I must come to some agreement." For Inez then to begin singing this song, only to be joined by Maurice and, later, others, demonstrates musically the same conflation occurring between the Mormon bride and Jewish husband. Just as the song's musical language is a cultural mashup of Jewish and American identities, so too does Inez and Maurice's romantic intertwining represent a cultural and religious negotiation between Mormon and Jewish identities.

There is one musical theater convention noticeably lacking in this production, and it has everything to do with how the audience is prepared to frame the relationship between Maurice and Inez. Between the dance and "1425 Kensington Avenue," the Jew and the Mormon get married, but the wedding—so common a trope in musical theater happy endings as to make it a dramatic convention—does not occur on stage. Audiences instead are shown the makings of the romance and the couple's life in marriage, while the wedding itself is withheld. One explanation for the absence of a wedding scene is that Mormon weddings are private affairs, kept hidden away inside the walls of a Mormon temple. Maurice and Inez's wedding may be kept offstage because, well, actual Mormon weddings generally occur offstage, out of sight for all but a few. Also, as much as Mormons foreground marriage as an institution, the Mormon wedding ceremony itself is not nearly as dramatic or familiar as that typically practiced in America. Without an easily distinguishable wedding gown, fresh-cut flowers, the bridal march, or toasts to the bride and groom, for example, the Mormon wedding seems a little too common to play well on the musical stage—not that Mormon temple ceremonies of any type are ever portrayed or even discussed outside of the temple walls, another probable reason why *Life...More Sweet than Bitter* skips over the nuptials.

The missing wedding, as one might call it, matters a great deal to how this story functions within the Mormon-Jewish paradigm I have used to frame this discussion. As Raymond Knapp has pointed out in his discussion of the “marriage trope,” weddings in musicals serve as a reconciliatory fantasy, an illusory gesture that suggests the union of a bride and groom as representatives of particular communities, races, backgrounds, and so on, promises reconciliation between those two communities. Musical, like comedic plots in literature, still operate under an assumption of magical circumstances that allow *Guys and Dolls*’s high-rolling gambler Sky Masterson and Save-a-Soul naïf Sarah Brown, for example, to, rather improbably, live happily ever after. As it was in *Promised Valley*, that kind of extreme fiction is lacking in *Life...More Sweet than Bitter*. Instead, Maurice and Inez’s offstage wedding might be taken not as a *union* of Mormon and Jewish cultures, but rather a continuation of Mormonism and Judaism as parallel entities, essentially the same in function, and endowed with the same purpose. Inez and Maurice can fit their different world views into a single marriage because, from a Mormon perspective at least, the world views are already one and the same. Thus the lack of a wedding in the musical seems less an oversight or a rock against convention, but more as a gesture toward the kind of union Mormonism would like to enter into with Judaism—indeed, the kind of union Mormons believe exists *a priori*.

One other notable instance in Locke’s taxonomy of the “Exotic Music Only” paradigm occurs earlier in the musical, as the boat carrying the Warshaw family nears the American shore and the passengers take in the sight of the Statue of Liberty. Only moments before, Maurice and his family nervously wonder about what life in a new country will be like. Those fears are quelled with the sight of the American coastline, however, and, as the stage directions dictate, everyone starts “humming and chanting as men on deck form circles and begin to dance in the old Jewish way.” Similar to the music during the infamous bottle dance in *Fiddler on the Roof*, the accompanying music oscillates between a slow tempo and a tempo exactly twice the speed of the first. An illustration

included in Maurice Warshaw's autobiography depicts this scene of merriment and dancing; the visual likeness between the central figure in the illustration and that of Tevye in the film version of *Fiddler on the Roof* makes plain the intended connection of the two stories. Without more specific stage directions or information from the story itself (a caption underneath the illustration simply states "They begin to dance in the Jewish way"), however, it is unclear what dance styles this music is intended to accompany. Still, the music's minor mode gestures toward a Jewish musical idea, and the written accelerando between alternating slower and faster sections likewise positions this dance within a broader exoticized Jewish sound world (see Figures 3.4 and 3.5).

Figures 3.4 and 3.5:

Conclusion

From the adoptive qualities of the Abrahamic covenant whereby Tevye the milkman could be rendered Mormon through the work of musical theater, to the performance of whiteness at the Polynesian Cultural Center, Mormon conceptions of conversion are rooted in embodiment. Furthermore, the very theatrical qualities of Mormon temple rituals enshrouds the faith in an aura of the dramatic and the spectacular and, as such, can easily offend. The Osmonds's peculiar performance of selections from *Fiddler on the Roof* may seem an innocent cultural nod of approval from one faith group to another—and it very well may be just that. But perhaps the ruse of performance and the screaming crowd masks a much more complex and calculated appropriation of Jewish culture into a Mormon cultural conquest. As Mormons have grown more adept at using musical theater as a tool for self-reflection and identity, perhaps it is unsurprising that with those reflexive glances some of the less savory qualities of Mormon theology and policy come into view.

direct line to God to receive understanding within that person's sphere of influence. A father, for example, would expect to receive revelation not only for his personal doings but also for those of his family, who are believed to be under his care and judgment. By this same logic, leaders of the Church then receive revelation for the entire body of the Church, as determined by the sphere of influence that position occupies.

This complex understanding of the written and spoken text is neatly paralleled by the theater, where lines that are written down exist somewhere offstage, out of sight, and are mystically created and immediately erased by those uttering its words. This gives the illusion of immediacy with the portrayals on stage, but also distorts the relationship between the orator and his text, helping to frame a complicated cultural practice of forgetting. To put it another way, by vicariously voicing a character, the performer pushes the limits of our believability while simultaneously allowing us to suspend disbelief—to “forget”—that who we are watching and listening to is actually a character, and not a ventriloquizing actor moving his lips to memorized lines. The voice in performance can be *seen* as well as *heard*, felt materially just as much as imagined sensually. As Stephen Connor writes, by the end of the eighteenth century, “the theatre, etymologically the place of seeing, would sediment the visibility of the voice.”³²

Yet in seeing the voice on stage, audiences are permitted to forget events as they are actually taking place before them. This frames forgetting as a necessary quality of audiences for the fantastical, magic, spectacle, and otherwise theatrical performance. We need only recall how those watching and listening to Brigham Young in 1844 were convinced they heard the voice of Joseph, even though, in all likelihood, those witnesses heard and saw what they wanted to hear and see—they forgot themselves, and eventually came to believe this padded historical narrative, forgetting

place without drawing attention to itself, further contributing to the illusion of historical continuity that Mormons assume of their faith. We may well remember Eliot's argument that every new piece of literature forces a reordering process on all the others that came before it. As such, every General Conference address contributes to a canon not bound by pages but only by the limits of human memory.

Correlation

Amid the furor of radical theological viewpoints, differing opinions on historical and doctrinal matters among general authorities, and the pressure to erect borders during the ongoing culture wars of the Cold War era, Mormon leaders in 1960 began the ongoing process of radically stripping down (or “correlating”) the key doctrines and policies of the Church. Historian Matthew Bowman actually identifies the roots of Correlation beginning during the progressive movement in the first decades of the twentieth century, as Mormons grappled with a post-polygamy identity. “Correlation, broadly defined,” he writes, “came to replace plural marriage as the animating force of the Mormon quest for salvation: the structure through which they imagined what gaining heaven looked like.”⁴¹ Like minstrelsy before and musicals afterward, Correlation became a means of achieving harmony in the various enactments of what needed to be seen (and heard) as Mormonism. As it grappled with modernity, Joseph's religion where “all truth can be circumscribed into one great whole” needed to temper itself into something less malleable in order to translate in a rapidly changing world.

Mormons post-Correlation experience their faith much differently than those of earlier generations. As Matthew Bowman writes, “If you've ever wondered how Mormons went from

⁴¹ Matthew Bowman, “The Progressive Roots of Mormon Correlation,” in *Directions for Mormon Studies in the Twenty-first Century*, edited by Patrick Mason (Salt Lake City: The University of Utah Press, 2016), 15.

still denied the priesthood. Today Mormons number around fifteen million and the priesthood can be held by all men, though not yet by women, and sexual orientation no longer is considered a choice. The two years represent very different times for the Mormon Church, so it might be expected that the scriptural predilections of those speaking in 1971 were delivered in a very different cultural atmosphere than that of 2014. Yet, what the graphs show is how very little change is represented in the context of the Church leaders' counsel in those given years.

Still, though Correlation is known—even touted within Sunday school manuals as a divine system of ordering—its mediating effects are masked by its reach. Speeches or instructions from prophets pre-Correlation are selectively chosen, which perhaps explains why the Church makes available conference addresses that took place only after 1971, well after Correlation had taken effect. Today a Correlation committee filters all Church communication, ensuring that all official Church materials, publications, and even conference talks adhere to the guidelines set forth during Correlation. No single leader is above the Correlation committee, not even the prophet. This is striking, since the basic presumptions of revelation and living prophets rest on being able to voice communications God has for a changing world, yet Correlation presumably prohibits just that from happening, since it is designed precisely to do the opposite. “Correlation creates nothing,” says Paul H. Dunn, a general authority who served from 1964 to his death in 1998.

That’s the process. It has no authority to make a statement that creates a position or direction. . . Since the 1970s, I’ve seen that drift, where correlation now is telling me, if I write something to get through correlation, ‘You can’t say that.’ And I write back and say, ‘Why?’ And they say, ‘Well, because we think this is the interpretation.’ And I write back and

How could a bastardized version of divine speech pass as the real thing? Those Mormons who took the bait eventually questioned not the *content* of the message, but the *medium*. They didn't question what the message contained, in other words, but asked why official Church material would be published on a personal blog rather than on official Mormon sites. The next chapter will address more specifically the problem of sifting the true messages of Mormonism from chaff like GenConPreview, but as Daymon Smith observes, the site is able to dupe Mormons because the mechanism for creating these fake talks and the way actual General Conference talks are prepared is essentially the same, in that

former talks are cut up, arranged according to topic of theme, which is then found in some scripture decontextualized from another story, and these are arranged into a talk.

What is the difference? Is there so much more intelligence, spirit, and light going into the

political experience to push anti-Communist sentiment, often from the pulpit. His overt concern with Communism died down when he later became Church president, but in 1971, Benson was determined not to let the Church be led asunder by left-leaning sympathizers, whether within or without the Church. While his remarks in this talk are not explicitly anti-Communitic, within the broader discourse of 1970s anti-rock sentiments spearheaded by the John Birch Society, to be concerned with Communism was to be concerned with rock 'n roll.

A decade later, Lynn Bryson, a music industry entrepreneur in Utah, began preaching a similar message to Mormon congregations all over the country. Bryson considered rock music potentially dangerous, claiming “that if Christians did not wield this powerful tool in their favor the devil would surely wield it in his!”⁵⁷ Bryson also held an unfavorable view of the Beatles (“When the Beatles crashed in to cash in, the world was transformed under the sheer skill of a well tooled attack.”), but he stopped short of denoting its inherent Communist trappings. Rather, Bryson felt like rock music was simply being used as a tool for the devil and wasn't in itself an unmitigated evil. He writes in his book *Winning the Testimony War* that “rock music, like an ax, can penetrate to the very core of hardest resistance, so that even pure light may pass. . . . The one wielding the ax decides whether to strike a blow for good or evil. The music is merely the ax...not being good or evil...if it merely has a captivating beat.”⁵⁸

⁵⁷ Lynn A. Bryson, *Winning the Testimony War* (Lynn A. Bryson, 1982), 11.

⁵⁸ Bryson, *Winning the Testimony War*, 11. Bryson puts forth an elaborate analogy around his connection between rock music and an ax: “With that picture in your mind...of the music represented merely as an ax...now picture the entertainer as a woodsman. Picture the youth of today as trees...about to be hewn down...or about to be fashioned into beautiful tabernacles of truth. The overwhelming majority of today's ‘woodsmen’ are voracious ‘beatles’ destroying every tree in sight. I wanted to send into the forest ‘woodsmen’ who were true ‘carpenters’ for the Lord. . . . To take the analogy one step further, some entertainers are so unlike the ‘carpenters’ that they can fittingly be described as ‘rolling stones!’ They crush everything in their pathway...masticating the poor timbers that have barely been left standing by the disease-bearing ‘beatles’ that have preceded them.” See Bryson, *Winning the Testimony War*, 11-12.

Bryson received some measure of validation from unnamed general authorities—possibly Benson himself—and took his message about the evils of rock music to various “firesides,” or irregular gatherings of Mormon youth sponsored by local congregations, throughout the 1970s and 1980s. He called himself a “war correspondent” reporting from the front lines of a “testimony war” in which the most valiant youth of the Church were embroiled, many unknowingly. He specifically warned against hidden messages buried within rock music that might be detected blatantly only by playing records backwards, a process known as “backmasking.” Bryson felt these “hidden voices” harnessed the power of the devil to speak subliminally to unsuspecting youth.

The prophetic caution fell on deaf ears. For many young Mormons coming of age in the 1970s and 80s, Bryson and Benson were two unlikely partners cautioning against the wiles of rock music. This was the time when Mormon performers were beginning to make a presence in mainstream pop music, with some, led by Donny and Marie Osmond, becoming pop icons. Out of this time period also came a flurry of rock and pop musicals penned by and for Mormons.

One musical in particular has maintained a significant grip on Mormon culture, and brings back into the discussion Lotman and Uspensky’s notions of cultural memory and forgetting. *Saturday’s Warrior* follows the lives of the Flinders children from the pre-mortal life where they make certain commitments to one another through their struggles in mortality, where they no longer remember their previous existence and must rely on faith to reunite and fulfill those commitments. Based on Nephi Anderson’s 1898 novel *Added Upon*, *Saturday’s Warrior* depicts a pre-mortal existence where the same sociality exists that will eventually exist in mortality—siblings, spouses, and friendships existing before mortality are then reinstated on earth. There are thematic resonances between *Saturday’s Warrior* and Shirley Temple’s 1940 film *The Blue Bird*—not least being the scenes in the film where characters time travel, visiting the past to bring deceased grandparents back to life simply by remembering them and glimpsing into the pre-mortal world to see yet-to-be-born

children.⁵⁹ As the action in *Saturday's Warrior* oscillates between Earth and the pre-mortal heavens, issues of remembrance and forgetting become a central part of the musical. Having passed “through the veil” upon being born on Earth, the main characters no longer remember pre-mortal existence, nor the promises made to one another. The voice, however, transcends time and space and thus acts as a remedy for those suspended outside of sacred time.

Figure 4.3:

Siblings Jimmy and Julie serve as the primary characters in the story, their own struggles with maintaining their commitments to relationships—Jimmy to his family and Julie to her soul mate, Todd—forming two of the primary dilemmas of the show. The third and comic leg of the plot involves two missionaries, Wally and Harold, in their hope to reunite on earth as a “fearlessly

extraordinary” gospel-spreading duo. Wally and Harold bear a striking resemblance to Elders Price and Cunningham in *Book of Mormon*, as Elder Price likewise wants to “do something incredible/That blows God’s freaking mind” (see Chapter 5). In *Saturday’s Warrior*, the two missionaries serve as a foil for the more serious relationships of Jimmy and Julie but, as I will describe later, Wally and Harold’s union is nonetheless structured as a romance and is crucial for the musical to resolve all other conflicts, in effect bridging the great chasm between pre-mortal and mortal worlds.

Along with the parents, the seven Flinders children (minus Emily, the youngest child who is still waiting in the pre-mortal world to join the family on earth) are part of a performing family. We meet the now-mortal Flinders family during a filmed performance profiling their newest honorific as “Riverdale’s Family of the Year.” In this performance of “Daddy’s Nose,” members of the Flinders family wear exaggerated prosthetic noses and sing about all sharing a prominent nose, apparently inherited from their father. The number serves to establish the family as wholesome and decidedly Mormon, their performance style an obvious nod to the popular Mormon performing family The Osmonds.

“Daddy’s Nose” places a question mark on the family’s identity, however. Unlike the rest of the rock score, “Daddy’s Nose” is a vaudeville number. In a typical musical structure, the sound of vaudeville is musical coding for ethnicity, almost invariably Jewish. The song’s chromatic antecedent and consequent phrases, along with the reference to vaudeville performer Jimmy Durante (whose famously big nose he referred to in Yiddish as the “Schnozzola”) and the throwaway line at the end that “Mom’s even got it,” frames the Flinders as ethnic character types. The physical symbol of their Otherness (even as a costume gimmick) is augmented even more by the Flinders’s musical tampering with vaudeville tropes of ethnicity (see Example 4.1).

In the 2016 film version, “Daddy’s Nose” is replaced with a reprise of an earlier number called “Pullin Together” that the Flinders children sang in the pre-mortal world, a trope in the show

of using reprises to bridge pre-mortals and mortal worlds that I discuss more later. While cutting “Daddy’s Nose” changes the ethnic connotations of the newest version, the remake adds other songs that place *Saturday’s Warrior* within other racially-charged musical theater conventions. The addition of black British-American singer Alex Boyé’s character in the pre-mortals world, for example, who sings at the beginning of the show a gospel-inflected number called “Blink of an Eye,” places *Saturday’s Warrior* within a long history of musicals featuring black gospel performers singing as themselves, and less as integral characters in the plot.⁶⁰

Example 4.1:

Given the original musical’s treatment of ethnicity in “Daddy’s Nose,” Jimmy’s impulse to distance himself from the embarrassment of his family might therefore be interpreted as a typical story (with hints of *The Jazz Singer*) of religious rejection in favor of assimilation. In an eerie echo of the horrors of the Holocaust, Jimmy’s friends even pointedly accuse the large Flinders family of being a credible danger to an overcrowded planet (“Zero Population”). Andrea Most has written extensively about the Jewish narrative of assimilation through musical theater, a process she calls

⁶⁰ See, for example, Todd Decker’s discussion of Paul Robeson in *Show Boat: Performing Race in an American Musical* (New York: Oxford University Press, 2012) and Dan Dinero’s exploration of black women in musicals in “A Big Black Lady Stops the Show: Black Women, Performances of Excess and the Power of Saying No,” *Studies in Musical Theatre* 6(1) (2012): 29-41.

“theatrical liberalism.” According to Most, Jewish performers not only took advantage of theatrical spaces to self fashion new, acceptable identities in order to become more American, but they also in the process shaped musical theater conventions still operative today that bear traces of assimilative ideology.

This same process may be at play in *Saturday’s Warrior*. Through performance, Jimmy is made aware of problems with his “ethnic” identity and chooses to reject his family in favor of easy assimilation. He opts to blend in with the exaggeratedly edgy rock theatricality of his peers (the sonic evidence of Benson’s jeremiad) rather than the quirky, yet wholesome, musical numbers his family performs. Importantly, Jimmy’s rejection of his family comes initially in his leaving the family musical group and taking on a new musical persona with his friends. This challenges the collective singing ideology that *Promised Valley* promotes; it is significant that Jimmy’s coming of age, his subsequent faith crisis, and his eventual return to his family (which presumably means rejoining the family’s band) all hinge on his willingness to sing with his family. Singing together means each body is vibrating together, and implies that all are on the same wavelength and sending the identical message (see Chapter 5). It’s only a slight exaggeration to say that if he can’t sing with the group, then Jimmy’s eternal relationship with them is threatened.

The rest of the Flinders likewise appear to understand the plight of their ethnic and musical identity, as they jokingly lament of the nose, “would it be so bad if it had stayed with old Dad?” Yet through performance, the mask is put on and taken off at will, blurring lines of ethnic identity. Andrea Most suggests Jewish vaudeville performers similarly “subverted the basic assumptions of eugenics” through performing the easy slip in and out of various racial categories on stage, “call[ing] into question the alleged immutability of racial bloodlines.”⁶¹ Because the Flinders children in the

pre-mortal world don't sing vaudeville, yet do so in "Daddy's Nose," it can be taken that ethnicity is a mortal condition and stands apart from one's true identity, that ethnicity is indeed a kind of performance and, like the prosthetic nose, is a mask that can be put on and taken off again.

After learning of his sister Pam's death, Jimmy seeks clarity in an existential number ("Brace Me Up"). This song functions as a kind of dream sequence, another typical musical mainstay. There is no ballet dancing here, though; rather, the structure of what becomes a combination song allows multiple voices to compete in Jimmy's conscience. Jimmy's melody is augmented by musical interjections from three different groups: his edgy friends cajoling him to join them, the Flinders family begging him to not turn them away, and his yet unborn sister Emily—now joined in heaven by his deceased sister Pam—reminding him of his pre-mortal promise to his family. This musical moment reveals the edge the Flinders family is teetering on; the growing divide between them, Jimmy, and the girls in heaven is represented through musical fragmentation that seems doubly significant (*flinders* means splinter or fragment). The music grows increasingly chaotic as melodic shards sung by Jimmy and the three groups overlap in combination. The musical cacophony gives way finally to silence, where Jimmy hears only an echo of his family's plea: "Please don't turn us away." As with Laurey in *Oklahoma!* and Bill in *Carousel*, Jimmy finds his dilemma resolved through the message of the dream sequence. He returns to his family and thus maintains his pre-mortal commitment.

Meanwhile, Wally and Harold, the cocky missionaries united now as mission companions on earth, discover a man named Todd who is seeking truth and happiness and convert him to Mormonism. His steady, Julie Flinders, has recently dumped Wally in a Dear John letter. Over the course of that long-distance courtship, Wally writes to Julie that, after a long line of disappointing mission companions, he has been assigned with Harold—a new companion who nearly gives away the secret by suggesting he may have known Wally in the pre-mortal world. In the conventions of

musical theater, the broken road that leads to Wally and Harold's union is a blatantly romantic one. Just like the other couples in the story, Wally and Harold vow to find one another on earth. They also sing to one another. Their funk-laden song "Humble Way" is meant as a comedic moment, and indeed manages to get all the other pre-mortal characters dancing, but the persistent slap bass underscoring their dialogue signifies the sexiness of funk as much as its grooviness. "Humble Way" may not make explicit claims about homosexuality, but it does embrace the more sanitized homosociality that makes the companionship's success together on earth actually work as a romantic resolution. Looking ahead to the final chapter, this also forms a counterweight to *Book of Mormon's* depiction of missionary homosociality in the song "Turn It Off"—a tome to emotional (and sexual) repression that ties the bewildered and frightened missionaries together in pious assembly. Yet while *Book of Mormon* missionaries sing and dance together as a safeguard against doubt, *Saturday's Warrior's* missionaries use song and dance to bring their troubled relationship full circle into resolution.

In the 1989 film version of *Saturday's Warrior*, Wally and Harold, after their success in Todd's conversion, burst into a reprise of "Humble Way." Todd's conversion encourages a performance identical to that done in the pre-mortal world—a world they otherwise have no recollection of. Having completed their intended "mission" and fulfilled their promise to one another in the pre-mortal life, the two cannot be kept from singing a song the audience knows the characters should not be able to remember. Because the reprise allows audiences and performers to see and hear continuity across time and space, their reprise ruptures conventional ideals of history and time. Principally through voice, *Saturday's Warrior* creates a world where people can truly never die and where important relationships survive intact across lives and death. The show suggests a person's voice can serve as the catalyst that makes the forgotten past memorable again, if only provisionally. Thus singing becomes a metaphysical act that tethers one world to the other, all the while signaling that the true identity and purpose of Wally and Harold has now been realized.

Now that Julie has become disentangled from her relationship with Wally, she is introduced to Todd (oddly enough, through Wally and Harold—now serving as foil to the “real” relationship of the musical) and both immediately sense their eternal connection. Todd and Julie sing a reprise of a duet they first sang together in the pre-mortal world, “Circle of Our Love.”

Todd: I’ve seen that smile somewhere before.

Julie: I’ve heard your voice before.

Both: It seems we’ve talked like this before.

Todd: Sometime, who can be certain when?

Julie: But if I knew you then...It’s strange. I can’t remember.

In the opening scene of the musical, the pre-mortal couple rehearses this exact mortal meeting as they promise to find one another and get married. The Mormon instinct to perform is here portrayed as a pragmatic aspect of eternal familial bonds: Todd and Julie’s actual earthly reunion is but a successful performance that has been well rehearsed and planned. And it is through the act of performance, of singing together, that the relationship materializes.

It is significant that for Todd and Julie, common voices give away their true identity. Their reprise of “Circle of our Love” in fact seems deliberately reminiscent of the song “Where or When” from Richard Rodgers and Lorenz Hart’s 1937 musical *Babes in Arms*, which, like *Saturday’s Warrior*, is also about the feeling that some relationships may have begun much earlier, perhaps even in another dimension. Billie and Val perform the number at the top of the show, much like Julie and Todd do in *Saturday’s Warrior*. As Billie sings in the refrain, “It seems we stood and talked like this before / We looked at each other in the same way then / But I can’t remember where or when.” Val later counters, “Sometimes you think you’ve lived before / All that you live today. / Things you do come back to you / As though they knew the way,” but then softens by adding, “Oh, the tricks your mind can play!” While Rodgers and Hart stopped short of admitting that such feelings might have a

metaphysical explanation, the creators of *Saturday's Warrior* took the idea seriously and elided the sentiment with a near-forgotten Mormon belief. By modeling “Circle of Our Love” on the song “Where or When,” *Saturday's Warrior* seemingly alludes to an established trope in classic musical theater in order to set up the premise that singing transcends physical or spiritual dimensions.

As Todd and Julie get lost in one another's embrace, Harold comforts a distraught Wally and they exit the stage, their future relationship confirmed by Harold's excited comment that they “could be roommates at BYU.” In this way all three mismatched relationships are resolved—Jimmy finally returns to his family, Julie and Todd reunite on earth, and Wally and Harold enjoy the success of their “extraordinary” pairing.

The true “marriage” of the show, however, while represented by all three unions, seems to be a reconciliation between pre-mortality and mortality. This seems a lopsided resolution, since no one is left in the pre-mortal world to reap the benefits of reconciliation. Unlike in most musicals, where seemingly irreconcilable worlds are united in the end through cultural and musical compromise, the pre-mortal and mortal worlds in *Saturday's Warrior* now look and sound identical—even the music is the same. Julie and Todd and Wally and Harold sing just as they had before, and though it is left unexplained, presumably the Flinders family continues to perform campy songs just as they always had. *Saturday's Warrior* sidesteps the full import of the “marriage trope” in favor of character self-realization—in this case a process that seems to resolve but really only comes back in full circle. For a religion that favors eternal progression over a static afterlife, perhaps no better musical ending could put such a fine point on the story of Mormonism.

Correlated Voices

Saturday's Warrior imagines a voice that sticks, or remains somehow intact, between phases of mortality. There is some scriptural precedent for such a claim. Mormons and Christians alike share

the impression that “there shall not an hair of your head perish” between death and the resurrection of the body.⁶² Mormon scripture is even more explicit about this. The prophet Alma in the Book of Mormon explains that, in the resurrection, “the soul shall be restored to the body, and the body to the soul; yea, and every limb and joint shall be restored to its body; yea, even a hair of the head shall not be lost; but all things shall be restored to their proper and perfect frame.”⁶³

The opening verses of the traditional Christian hymn “How Can I Keep from Singing” goes so far as to allegorize sound as an emblem of truth. Like the stickiness of voice in *Saturday’s Warrior*, singing is taken in this hymn to represent a testimony or personal witness of a conversion to truth *heard*, not seen.

My life goes on in endless song
Above earth’s lamentations,
I hear the real, though far-off hymn
That hails a new creation.
Through all the tumult and the strife
I hear its music ringing,
It sounds an echo in my soul.
How can I keep from singing?⁶⁴

The act of singing therefore allows performers to enact truth, and choral singing (the “far-off hymn”) models a disciplined vocal response to pre-mortal knowledge that “sounds an echo in [the] soul.” Voice, then, as a material entity, should remain unhampered between mortality and the afterlife. This seems to be the acoustic principle from which God renders judgment, if we recall the

awestruck editorial wondering about the phonographic implications of Wilford Woodruff's wax-cylinder testimony. Even Jesus made the same assertion when He said, "Heaven and earth shall pass away: but my words shall not pass away."⁶⁵ What *Saturday's Warrior* claims is that somehow, even prior to a person gaining a body of flesh on earth, the voice uttered in the pre-mortal world is traceable and identifiable on earth. The voice, as an emblem for the rest of the body, has always been.

Thus the voice for Mormons is an ultimate "always already." For Mormons, the phenomenological assumptions about vocality raise the stakes for identity and intention, for the corrupting influences of mortality are rarely conceptualized beyond bodily sins such as lasciviousness, sexual promiscuity, violence, or gluttony. This list of physical transgressions are almost never extended to vocality. As discussed in Chapter 2, well into the twentieth century Mormons in fact had no qualm using the voice to break biblical injunctions against honesty by "lying for the Lord." Thus, despite the voice's apparent eternal nature, little outright attention is given to the standardized vocal behavior in Mormonism. Rather, Mormons are known for their dietary and lifestyle restraints against coffee, tea, alcohol, cigarettes, drugs, and sexual deviance of any sort. Nonetheless, through Correlation, the voice has become over the last several decades just as disciplined and codified as the Mormon body and its accompanying demeanor.

The Mormon preoccupation with standardized communication predates Correlation and could be traced back to Brigham Young's pet project, the Deseret Alphabet. This thirty-eight-character phonetic alphabet was intended to make the sounds of its people reflect the utopian vision their new-found isolation provided them. Mormons in Utah were coming from all over the world, not just in wagons starting from Illinois, many bringing languages and customs that could not always

⁶⁵ Luke 21:33.

be reconciled. This cosmopolitanism consequently proved to be a communications liability. It soon became apparent that “such a far-flung utopia built upon a mixture of the world population could only be unified through literacy and a common language.”⁶⁶ The Church planned a complete orthographic overhaul of the English language—similar to the same ambitions as other language planners of the nineteenth century, including Noah Webster—in hopes to unify the disparate cultural factions by creating a unified voice of Mormonism. Although the Church eventually abandoned the Deseret Alphabet when it became clear that a language peculiar to Mormonism would soon be obsolete, it represents an early attempt at simplifying spelling and grammar in order to better facilitate universal communication among the Saints. The voice was central to this utopian endeavor in the nineteenth century, no less than it became during Correlation in the middle of the twentieth century.

In fact, the Mormon practice of vocal vicarity is both compromised and augmented through Correlation. The voice of the prophet, which has been a model for vocality from the beginning of Mormonism, has become suspect in the last few decades. When the prophet speaks, Mormons can no longer hear an unhampered voice; rather, through Correlation, prophetic utterance is really a committee or departmental voice—an untold number of unseen people who massage God’s intended message to fit within a standardized mold established purely for the sake of continuity. Correlation democratizes the prophetic voice even as it enforces a strict top-down power dynamic among Church leaders.

Because Correlation effectively allows Mormons to look into the past and recognize it as proto-Mormon, Correlation frames a practice of history-making and history-believing reminiscent of nationalism and that recalls Eric Hobsbawm’s well-known concept of an “invented tradition.” The

⁶⁶ Roger M. Thompson, “Language Planning in Frontier America: The Case of the Deseret Alphabet,” *Language Problems and Language Planning* 6(1) (Spring 1982): 47.

invented tradition, according to Hobsbawm, occurs in moments when old traditions are weakening and newer traditions are viewed as unsuitable replacements—the crisis of modernity adding grist to the wheel of invented traditions. Instead, through repetition and a certain degree of play-acting, groups of people may project an invented tradition onto the past and presume therefore its imminence as “old.” In Hobsbawm’s words, the invented tradition “inculcate[s] certain values and norms of behavior by repetition, which automatically implies continuity with the past. In fact, where possible, they normally attempt to establish continuity with a suitable historic past.”⁶⁷ This ends up happening with Correlation. By association with past leaders or biblical events, newer traditions or policies get passed off as “old” and their practice in times far-removed from today can be recognized as in line with the continuity of Mormonism. Thus Eve may be depicted wearing modest clothing and Adam portrayed without a hint of facial hair if those images are projected on a screen while a prophet speaks about the importance of modesty in the Lord’s way. Correlation ensures continuity by providing the mechanism by which Mormons can project modern ideals into a past where they didn’t exist and into a future where they might not belong.

The repeated voice of the prophets, perfect in their homogeneity, likewise creates a sonic reference to the reach of Correlation. As discussed in the first chapter, prophets and lay members alike may model their voices after one another in an attempt to sound authentic and inspired. Mormonism is guided by the premise that voices can and should be modeled, morphed, and made new; Correlation interrupts the vocal theatrics by insisting that Mormon voices, above all, should sound the same. *Saturday’s Warrior* counters the logic of Correlation by recovering the early Mormon understanding of an eternal voice and bringing it back to contemporary times. In effect, *Saturday’s Warrior* reprises the original Nephi Anderson story and brings pre-Correlated Mormon ideals into

the modern world. The show itself becomes the convention it sustains and in so doing, brings Mormonism a little closer to its original self that exists in an otherwise unrecoverable, forgotten past.

Conclusion

It is difficult to downplay the tremendous effect of *Saturday's Warrior* on Mormon culture. The musical has been cited from the pulpit and touted in conversion stories and testimonies, creating a generational outlook on Mormon theology that is actually unsubstantiated. It seems that *Saturday's Warrior's* success was a surprise for everyone; when I bring up *Saturday's Warrior* in conversation with Mormons, almost without fail a sheepish grin or embarrassed laugh is the response. The show is dated, to be sure. And the 1989 filmed version of *Saturday's Warrior*, which is how most Mormons first encountered the show, lacks any enviable cinematography or redeemable acting. Yet those same embarrassed shrugs or sighs can quickly morph into cheery refrains of “Circle of Our Love” or “Daddy’s Nose.” Part of this apologetic posture may come from the disparity Mitchell Morris points to, between the music that privately animates our minds and hearts and that which makes it past our carefully constructed filter for what is seemingly respectable, or important, music.⁶⁸ Shows like *Saturday's Warrior* are terribly bad by almost any standard, and probably deserving of the frequent giggles stifled on their behalf. Yet, these silly shows are in effect an answer to serious, but often unobserved, questions—questions of memory, identity, and the constancy of voice that helps connect the two. The indefensible nature of these shows in itself does little to betray

⁶⁸ Mitchell Morris, *The Persistence of Sentiment: Display and Feeling in Popular Music of the 1970s* (Berkeley: University of California Press, 2013), 2. Morris intends this as a critique against scholars wary of divulging conceits that may be suspected of being “sentimental,” although those same worries undoubtedly help determine behaviors and practices of many music-lovers outside the academy. He writes that, “I have often noted a disparity between the songs and styles many people seem to love to listen to—those they play in the privacy of their own homes, the ones that send them into paroxysms of delighted recollection, those they remember in remarkably detailed fashion—and the songs and styles that tend to get written about in vigorous, critically engaged terms.”

the laughter; to quote Morris, my project here is to “know more about what all this laughter defends against.”⁶⁹

Nonetheless, the deeply-held belief that families existed as units before coming to Earth and that romantic relationships began before mortality were not a part of modern Mormon culture until *Saturday's Warrior* reintroduced them in the 1970s. Today, as one scholar has noted, the musical has become “folk doctrine appealing to Mormons seeking assurance that divine intentions were deeply woven into their lives and that though these beliefs set them apart from the world they were indeed fulfilling God’s plan.”⁷⁰ By using a story with roots well before Correlation, *Saturday's Warrior* forced adaptation in Mormon doctrine that was not possible with the tight grip of Correlated Mormonism. In order to effect change, Mormon culture stumbled upon a path through the cracks of Correlation—the path of musical theater—one of Mormonism’s most reliant and resilient forms of mediation.

Other Mormon-made musicals from this era addressed similar issues of forgetting and remembering, including *My Turn on Earth* (1977) and *Don't Forget to Remember* (1981). *Saturday's Warrior* aside, the majority of these and other rock musicals are largely forgotten by those outside of Mormonism, and performances of them today remain scarce even within the Church. Yet this era of prolific rock musical creation offers a telling glimpse into the machinations of Correlated Mormonism. Many of these musicals address with urgency the dangers of forgetting pre-mortal commitments in the face of increasing secularization. In hindsight, they seem to endorse the simplified doctrine of through-the-glass-darkly religion that Correlation provides. At the same time,

growing discontent among Mormons unaccustomed or resistant to the convenient narratives of Correlation made remembering pre-Correlated Mormonism a liability.

Mormon apostle Franklin D. Richards once said about forgiveness that, “In some ways, being able to forget is almost as valuable as being able to remember.”⁷¹ His words might just as well be applied to Correlation, which was designed to erase any problematic events or policies from cultural memory. Over the next few decades the Church did its best to close off competing historical narratives about polygamy, race and the priesthood, polyandry, Joseph’s seer stones, and other dark corners of Mormon history by excommunicating vocal objectors. The issue the Church has needed to defend most in the new millennium is not truth, *per se*, but rather its now-dominant Correlated version of the truth. The next and final chapter looks more closely at the effects of Correlation on Mormonism today, and explores how the singular message of an unwavering, streamlined doctrine reveals a broken mechanism within Mormon communication.

Chapter 5

Voice Interrupted:

Book of Mormon and the Failed
Message of Correlated Mormonism

“Should a society actually succeed . . . in suffocating
all contrary opinion, then its own vital juices no
longer flow and the shadow of death begins to
fall across it. No society—ecclesiastical or political,
military or literary—can afford
to be snared by its own slogans.”

Edwin Scott Gaustad, *Dissent in American Religion*

“And now behold, we desire to know the cause
of this exceedingly great neglect;
yea, we desire to know the cause
of your thoughtless state.”

Alma 60:6

The opening number of *Book of Mormon* features a flurry of introductions from its cast of Mormon missionaries. The song “Hello!” plays on the sonic memory of a typical first-meeting with a Mormon missionary, the ringing doorbell. As each cast member enters the stage—wearing the appropriate Mormon missionary uniform of white collared shirt, simple tie, and small rectangular name badge pinned above the left breast—he sings a friendly “hello,” pitched to falling minor thirds that echo the familiar ding-dong sound of a doorbell. As the song continues, the cordial yet militant hellos weave in and around one another in a canon. The uniformity of the several men, both in body and in voice, makes the entrance of bumbling Elder Arnold Cunningham all the more noticeable. When he makes the sign of pressing a doorbell, the sound effect audiences hear is an abrasive

screech rather than the melodious doorbell tones heard when the other missionaries do the same. As with the excommunicated Mormons discussed in the previous chapter, Elder Cunningham seems out of tune with the others; in fact, all action on stage stops while he tries to deliver the scripted lines he has been taught at the Missionary Training Center. He gets his introduction wrong and is quickly chastised by an off-stage voice: “No, no, Elder Cunningham, that’s not how we do it! You’re making things up again. Just stick to the approved dialogue. Elders, show him!” The song kicks back in, and the rest of the missionaries continue in perfect harmony, rhythm, and stylized choreography, delivering the approved dialogue happily and without error.

This opening number introduces the audience to the story’s anti-hero, Elder Cunningham, but it also cleverly highlights the perception many people have of Mormons as homogenous, unflinching characters whose salesmanship seems just a little *too* prepared when they deliver their spiel on your doorstep. *Book of Mormon* captures in this scene the great efforts Mormons go through to ensure their message is standardized, voices synched, and image flawlessly sharp. To fall outside of those norms, as Elder Cunningham so obviously does, is to be a threat to the singular message Correlated Mormonism demands. By the end of the show, however, Elder Cunningham shows how “making things up,” and therefore scrambling the approved message of Mormonism, frees the meaning from the message, and thus offers the characters hope built upon a new and vibrant mythology.

Elder Cunningham’s inability to voice Mormonism correctly in *Book of Mormon* offers a biting commentary on Correlated Mormonism and glimpses a new way of thinking about the Church’s recent (and very public) excommunications. Importantly, the musical highlights the degree to which Mormons rely upon, and become deaf to the consequences of, the homogeneity Correlation provides.

I laid out my discussion of Correlation in the previous chapter as a streamlining process with some serious effects on the way the Mormon Church relates and receives messages from God. I want to go even further with this discussion here by thinking of the singular message of Correlated Mormonism in terms of vibrational consistency. Musicologist Nina Eidsheim recently has outlined a way of thinking about music or sound fundamentally as vibrational. By shifting the discourse on sound away from musical objects and toward the material realm of vibrations (including the bone and flesh vibrations of the human body when sensing sound), she argues that we may begin to think of musical analysis as “an investigation into relationships and community.”¹ I evoke Eidsheim’s claims by suggesting that one way Correlation works is by disciplining sounding bodies, and that it depends on an unchecked assumption that the way of hearing or sensing the message of Mormonism is universally agreed upon. I suggest vibrational theories may provide a helpful metaphor for understanding the recent excommunications of prominent Mormon dissenters—those who perceive and then vocalize a version of Mormonism that draws upon vibrations outside of the scripted phrases Correlation provides. Following Eidsheim’s work, I too, wonder if rethinking how people sense the vibrations of Mormonism might facilitate a renewed empathy for those whose words and bodies, like Elder Cunningham’s, “vibrate” differently.

This final chapter looks at the consequences of Correlation on Mormon communication and vocality. I arch back to the beginning of this story to better understand Mormonism today. How has the practice of vocal vicarity changed or evolved over the history of Mormonism? What are the globalizing effects Correlation has had on the way Mormons speak to one another? What about the speech of prophets and apostles? Has Correlation, as it might appear, compromised the essence of revelation and replaced the prophetic cry with an empty, failed voice? What might Correlation have

to do with public dissenters and their sometimes resultant excommunications from the Church? I analyze the 2011 Broadway musical *Book of Mormon* with these lines of questioning in mind, and argue that the musical envisions how a rupture in the veneer of Mormonism's idealized vocality can point back to a humane, ethical religious experience.

Dissent and Satire

In important ways, *Book of Mormon* and Wilford Woodruff's echoing voice both speak to the communication crisis Correlation has placed upon contemporary Mormonism. Both raise doubts about the integrity of an unceasing message in a rapidly changing social landscape. The missionaries singing the opening number know only how to repeat their message in the exact way they have been taught. Even when the missionaries practice introducing themselves in languages other than English, the rigid structure of the tune (backed up by snare drum hits reminiscent of marching band precision) makes words like "Me llamo" or "ni hao" sound hollow and pre-programmed. Indeed, their almost mechanical delivery of the text echoes Woodruff's wax-preserved testimony. Wilford Woodruff could hardly have guessed at the effect of his recorded voice, nor that it might someday be compared with a Broadway musical! In preservation, his voice became an object of scrutiny, a hallowed sound both inspiring and eerie, yet nonetheless always available. Those waxen grooves today allow for Woodruff's voice to speak to listeners vicariously through the medium of recording technology. His voice cannot fail; it will continue sounding its identical message for perpetuity.

Yet precisely because of its perfect recapitulation, Woodruff's voice *does* fail. The record of his voice can relay a message, but that message must always stand in apology for being non-dialogic. It's a peculiar quality of the dead—through recordings they can speak forever, yet forever will hear nothing. Necessarily disregarding whatever changes take place in the world, Woodruff's infinitely recycling voice will remain a faint echo of an idea, removed from its source. Yet, the *sound* of the

voice can have remarkable, long-lasting reach, even though the voice itself is moored to the finite animation of its host. Woodruff's voice resounds with its own compromise—eternally present, yes; its relevance for today, questionable. Woodruff's voice thus stands synecdochally for the stifled message of Correlated Mormonism.

Book of Mormon represents a loudening critique of Correlated Mormonism from outsiders—the choice of musical theater as the platform for grievances makes a neat parallel to anti-Mormon antics on nineteenth-century musical stages. It is telling that a number of criticisms recently have come from *within* Mormonism. Even more telling is that these critics (which includes the musical revue *Saturday's Voyeur* in Salt Lake City and, most notably, the popular online persona Brother Jake) also have been using musical theater to draw attention to the hold Correlation has on the Mormon Church. Brother Jake, described by one YouTube commenter as “the Stephen Colbert of Mormon satire,” uses musical theater to question the Church's dedication to homogeneity. He blithely carries a growing audience through fallacious explanations of controversial or historically problematic aspects of Mormonism. These explanations are presented as “Brother Jake Explains:” followed by video titles covering a number of dicey historical issues including “polygamy,” “Mormonism is not a cult,” “Church discipline,” and “Mormons are not racist.” Similar to other satirical explanations of Church culture from within the Mormon ranks (such as the “Dictionary of Correlation” by anthropologist Daymon Smith or the annual musical revue “Saturday's Voyeur” in Salt Lake City), Brother Jake's material jocularly occupies a liminal space, protected by online anonymity, where questioning, frustrated, or transitional Mormons dialogue with one another and true-believing members of the Church, who are often labeled TBMs for short.

Brother Jake has created several satirical videos that use musical theater to tell the story of Mormonism. One, called “True Believing Mormon Dude,” is a parody of Gilbert and Sullivan's “I Am the Very Model of a Modern Major General” from *Pirates of Penzance* (1879)—one of the most

parodied musical comedy numbers ever. In Brother Jake’s hands, the familiar musical theater tune sends a more sobering message about blind faith he sees as prominent in Mormonism: “I feel weird when people talk about my Mormon underwear / And when I go to church I dress real nice and shave my facial hair. / And even though you might be thinking ‘This guy is a giant prude,’ / It’s no big deal because I am a true-believing Mormon dude.” Inasmuch as Gilbert and Sullivan’s *Major General* is a bumbling and laughable buffoon whose naive, self-deprecating words have charmed audiences for generations, Brother Jake’s caricature of faithful Mormon men as similarly incredulous exploits Mormon’s use of musical theater as a means of acceptance. If Brother Jake’s video complicates an easy response, it’s because Mormon cultural offense is mixed with a Mormon cultural virtue.

Another of Brother Jake’s videos, entitled “Meant Symbolically” and set to the tune of the song “Defying Gravity” from the 2003 Broadway musical *Wicked*, problematizes the traditionally literal interpretation of historical events in the Mormon past. Brother Jake points to this unease of figurative belief in light of a traditionally very literal Mormon worldview:

This new approach is so exciting
I feel a huge sense of relief
Don’t have to turn my back on reason
In matters of belief. [. . .]
I’ll just say it’s meant symbolically
So I can justify it logically
That way I’ll reconcile all my beliefs
And never be pinned down!

It also seems fitting that Brother Jake chose to base his satire on “Defying Gravity,” a song with connotations of Elphaba—the infamously green-skinned Wicked Witch of the West—breaking out

of the confines of a judgmental society. As much as Elphaba's deluded hopes of acceptance are betrayed by her character's watery demise in *The Wizard of Oz*—a death faked in the much more sympathetic *Wicked*—so too might the Mormon conscience be pricked by the difficult position of defending theological notions rooted in a literal history no longer deemed feasible by science. As with the Wicked Witch, so too with Mormon history: a splash of pure insight threatens to melt it all away.

In another of his videos, Brother Jake satirically sings of the promises of Correlation. Set to the tune of the title song from *Oklahoma!*, Brother Jake opines that Correlation has been used by the Church to whitewash troublesome aspects of Church history, using its corporate muscle to choke out dissidence. With Church disciplinary actions against two prominent Mormon activists—Kate Kelly and John Dehlin—making headlines in 2014 and 2015, Brother Jake's satire hits a particularly sore spot on the Mormon conscience. While images of Kelly and Dehlin flash across the screen, Brother Jake sings:

Correlation, where sharing doubts just doesn't fly
And where every hour's
run by priesthood power
Which is really great if you're a guy.

Brother Jake continues his unbridled critique of Church policy, concluding the song with the following lines:

But if you don't know what to do
Just go pick up a manual or two
Cause when we say
Only white shirts on Sunday
We're saying we could use some homogenization:

Correlation's the way.
And if you say
'Hey, there's a better way,'
Just remember we're your only way to salvation,
So shut up and obey.

This sort of criticism may not be uncommon, or even unexpected, in a Church of 15 million members. It is the medium of musical theater, though, that seems to make Brother Jake's satire sting a little harder. When asked why he uses musical theater in his video satire, Brother Jake gave a response that perhaps almost any American Mormon could agree with: Mormonism and musical theater "were both intimately intertwined in my upbringing." He continues,

Brother Jake is a character who operates in the Colbert-like nether space of imitating the heuristics of an ideological 'in' group while taking no pains to soften or gloss over the harsher/more bizarre implications of the ideology itself . . . Musical theater, with its cheesy, cheery tone and generally straightforward messaging seemed like a perfect fit. It struck me as a great vehicle for taking something that externally appears harmless and marrying it with the uncomfortable, like playing 'happy birthday' in a minor key.²

From this account, it seems Brother Jake's intention is to discomfort. This *modus operandi* fits easily within general theories of satire, which P.K. Elkin argues is "a catalytic agent" whose function "is less to judge people for their follies and vices than to challenge their attitudes and opinions, to taunt and provoke them into doubt, and perhaps into disbelief."³ "Satirists can provoke by challenging received opinion," adds Dustin Griffin. "They can also provoke by holding up to

scrutiny our idealized images of ourselves—forcing us to admit that such things are forever out of reach, unavailable to us, or even the last things we would really want to attain.”⁴

Of course, these are dangerous qualities for an institution to tolerate. The Mormon Church in recent years has stamped out dissidence among its membership, arguing that members have the right to voice opinions but not to lead others into disbelief. Yet it may be precisely the draconian attitude that impels the establishment of this precarious balance, that births satirical material from within the Church. Griffin has argued that “it is the limitation on free inquiry and dissent that provokes one to irony—and to satire,” noting that if openly challenging orthodoxy was tolerated, then people would simply take their frustrations to the newspapers and debate openly there.⁵

As has been the case with both Kate Kelly and John Dehlin, however, it is unclear where free speech ends and inappropriate criticism begins. Following her public campaign for the ordination of women, Kate Kelly’s excommunication in 2014 by her bishop was explained in his letter to her:

The difficulty, Sister Kelly, is not that you say you have questions or even that you believe that women should receive the priesthood. The problem is that you have persisted in an aggressive effort to persuade other Church members to your point of view and that your course of action has threatened to erode the faith of others. You are entitled to your views, but you are not entitled to promote them and proselyte others to them while remaining in full fellowship in the Church.⁶

Similarly, the stake president⁷ of prominent Mormon blogger and podcast host John Dehlin wrote in his letter of excommunication that,

this action was not taken against you because you have doubts or because you were asking questions about Church doctrine. Rather, this decision has been reached because of your categorical statements opposing the doctrine of the Church, and their wide dissemination via your Internet presence, which has led others away from the Church. . . . [Y]ou do not have the right to remain a member of the Church in good standing while openly and publicly trying to convince others that Church teachings are in error.⁸

To continue my line of reasoning from earlier in this chapter, promoting dissenting opinions of Church policy or practice makes the dissenter’s crime being vibrationally inconsistent, and not necessarily being a heretic. Dehlin and Kelly’s message was incongruent with the singular message of Mormonism, and as their outcome suggests, inconsistency is perhaps the biggest threat that today’s Correlated Mormon Church cannot tolerate.

Both of these excommunications were of high-profile Mormons, and the close timing suggested to many that the Church was calculatedly silencing opposition during a time of increasing skepticism toward the validity and sincerity of many Church leaders—a conspiratorial scenario that Church officials denied. Regardless, as the official excommunicatory letters admit, the damning evidence is not doubt or disbelief, but a disruption of the singular message officially delivered by the Mormon Church. Yet without dissenting voices, religious dogmas are prone to stagnation and spiritual leaders to tyranny; for society’s own sake, historian Edwin Scott Gaustad has argued, it

must accept that “dissent makes democracy meaningful.”⁹ “Society’s and religion’s problem,” he continues, “is that amid the clanging cymbals of consensus it is frequently difficult to hear what the dissenter is trying to say. One has to make a special effort to listen. He that has ears to hear, said a dissenter of ancient days, let him hear.”¹⁰

Dissent in the Mormon Church has increased in the Internet age. Curious members can find their faith derailed by learning of inconsistencies in the historical record, which, as Gordon B. Hinckley once said, was the essence of Mormonism. Rather than do as Gaustad suggests and “make a special effort to listen,” the Church has responded to criticism by silencing voices of dissent. To that end, satire like Brother Jake’s musical theater-inspired videos emerges only in environments of repression and heavy-handedness, where conceptions of free speech are curtailed and uniformity expected. Arguably, this is the environment where Mormonism exists today. Shaftesbury put it well: “’Tis the persecuting Spirit has raised the bantering one. The greater the Weight is, the bitterer will be the Satire. The higher the Slavery, the more exquisite the Buffoonery.”¹¹

The Excommunicated

To be excommunicated in the proper sense is to be excised from the body of believers. Christian denominations have used the blunt tool of excommunication for centuries to pry out heretics, the possessed, and targeted threats to clerical authority. Although excommunication has always been a practice within Mormonism, the last several decades have seen an increase in what some might call persecution of members whose ideologies put them at odds with official Mormon

narratives. Prominent among the excommunicated are intellectuals, homosexuals, and feminists.¹²

The Mormon Church, like other traditional religious groups, maintains that it is within its right—and even responsibility—to excommunicate dissenters in order to protect both the group and dissenter from the consequences of riotous behavior. By stripping membership away from the accused, the Church feels that it is offering that individual a future opportunity to reclaim his faith, that through re-baptism and a proper order of repentance, he may eventually return to the flock as a believer.

There are more nuanced ways of looking at excommunication than merely a boundary-maintenance tool, however. Some scholars have appropriated the term “excommunication” to refer to a broader divestment of opportunities or material goods necessary for survival under certain imperialist and neoliberal ideologies. For example, sociologist Armand Mattelart argues that excommunication represents the status of most of the world’s population, suggesting that excommunication “lays bare the dark zone of the pacifying and pacifist vision of communication flows.”¹³ For Mattelart, the excommunicated are “the cultures and cultural areas that the theologisation of the apocalyptic struggle between good and evil have inscribed in the new code of the enemies of empire since 11th September 2001.”¹⁴ Arguably, Mattelart’s use of the term could and should be extended even further back in time to take into account the manner in which various peoples have been cut out of narratives of prosperity. The marginalized, oppressed, and deplored throughout the world have no effective platform for giving voice to their stories or circumstances, a

¹² In fact, in 1993 Apostle Boyd K. Packer listed these three groups as “dangers” to the Church.

position Nick Couldry suggests can only be negated through battling the frameworks of neoliberalism that deny the valuation of voice.¹⁵

Others offer a vibrational model regarding excommunication. Alexander Galloway, Eugene Thacker, and McKenzie Wark similarly theorize “excommunication” as a sociological phenomenon. They acknowledge that excommunication is far more than just a question of language, but that it is also “a question of community, belonging, and judgment before the law.”¹⁶ In arguing that excommunication is an “anti-message,” they consider ways in which excommunication and the excommunicated reflect a puzzling quality of communion and communication.

At the center of excommunication is a paradoxical anti-message, a message that cannot be enunciated, a message that is anathema, heretical, and unorthodox, but for this very reason a message that has already been enunciated, asserted, and distributed.

Excommunicants become this paradoxical anti-message themselves, their very material existence nothing but a residual indicator of the message.¹⁷

The dissenter might be said to carry the essence of excommunication as she resonates differently from the vibrational message of the community. At the same moment, she embodies an unutterable message that messages such as hers will be sent no more.

The excommunicated in Mormonism might similarly be understood as vibrationally suspect in an increasingly singular wavelength of Correlated communication. We already have learned of the value Mormons place on the sounding body. Brigham Young manages to match his voice with his ecclesiastical leader the same way Nephi does for Laban, *Promised Valley* rhapsodizes on the idealism

of collective singing, the Polynesian Cultural Center demonstrates how whiteness might be demonstrated through American song and dance, and *Saturday's Warrior* celebrates the capacity to listen for voices that predate the foundations of the world. Mormons and Mormon leaders today busily practice modeling a righteous-sounding voice in an effort to recapture the voice of God, a voice seemingly gone silent. Indeed, so much energy is spent in Mormonism on disciplining the sounds of assenting bodies that it makes sense that disciplinary actions against dissenters might likewise be concerned with the voice. Excommunicated Mormons are not allowed to pray or bear testimony publicly, or participate in temple ordinances; essentially, excommunication prevents Mormons from practicing vocal vicarity in the significant ways particular to Mormonism and ensures that the incongruent vibrations of dissenting bodies won't disrupt the status quo. Galloway, Thacker, and Wark write that "excommunication is the fantasy of an absolute end to all communication."¹⁸ This may be a fantasy, but the practice has real effects. With the excommunicated in Mormonism denied the capacity to practice vocal vicarity in the most sacred and consequential theaters within Mormonism, dissenters effectively embody the complete fulfillment of sonic and communicatory estrangement.

These various concerns about excommunication as a concept rattle the cages of centuries-old feelings concerning religious boundary-maintenance and clerics keeping at bay the rising tide of modernity. Those principles have been a part of Mormonism too, and increasingly so in the last few decades, when satirical representations of the Church on the musical stage have erupted. But I want to unravel the concept of excommunication as a punitive religious practice and place it in dialogue with the changing vocal patterns and messaging within the Mormon Church. As I suggest, excommunication—the conditional anti-message that states there will be no more messages—may be a

¹⁸ Galloway et al, *Excommunication*, 16.

fitting qualifier of Mormonism in light of how the modern Mormon Church itself has ceased to communicate in vital ways. In fact, Correlated Mormonism presents a study for how standardized models of communication fail to impart a message that carries compassionate or ethical ideals, but instead maintain a purposeful rhetorical balance designed to make certain that change cannot happen.

In some ways, it seems as though the ex-communicated have always found voice in Mormonism. Joseph and his prophetic descendants forged a sonic path to vicariously speak for a God who, for centuries, had remained either content or unable to speak for himself. Joseph's translation of *The Book of Mormon* effectively recovered the whispering voices of ancient times, allowing them to speak again from the dust. Even the Mormon practice of performing saving ordinances on behalf of the dead gives perhaps the most ex-communicated—the dead—a means of communicating again, at least in principle.

In other ways, the Church has gradually seized control over prophetic communication, raising questions about the nature of communication in the Church today. Some argue that the Mormon Church has fallen into a non-revelatory period, beginning perhaps as far back as the late nineteenth century but certainly since the mid-twentieth century.¹⁹ The absence of new revelation (a redundancy in terminology, yet pertinent nonetheless under the governance of Correlation) may have to do with the imposition of institutional—as opposed to spiritual—policies of the Correlated Mormon Church. In other words, the Church cannot receive revelation because, for all intents and purposes, it is no longer on God's wavelength. Linguistic anthropologist Daymon Smith argues that readers of *The Book of Mormon* ought to become their own translators rather than rely on the

¹⁹ Joseph F. Smith penned the last entry in the *Doctrine and Covenants* in 1918. Some Mormons believe the semi-annual conference addresses are of the same stature as the canonized revelations in the D&C, though these addresses are vetted by comparing them to previous, canonized passages in the scriptures themselves, which negates any sense of equality among the scriptures and contemporary speeches.

Church's textual exegesis. Smith goes on to suggest that Correlated explanations of The Book of Mormon do little justice to the fundamental message: "That we have, over time, not only altered the Book of Mormon itself, but also imposed manuals, sermons, and extra-canonical texts upon it, all these vanities may have something to do with the dearth of new revelations over the last century."²⁰ Smith chooses to defend The Book of Mormon from the institutional reach of Correlated Mormonism which "dominat[es] the voices of the text."²¹ Whether or not Smith is correct in his assessment of the Church is not as important as his observation that the Mormon Church's ability to communicate effectively is stifled by the machinery of Correlation. If true, then the Church has effectively excommunicated itself; if not, then we still wait for another explanation for why revelations have all but ceased.

If excommunication is a message that ends messages, as Galloway, Thacker, and Wark contend it is, then what can be said about the increasing cases of excommunication within the Mormon Church at a time when the Church has demonstrably limited *what* can be said and *how* it can be delivered? What about changes in public relations, where the Church's public relations department speaks on behalf of the Church while the prophets and apostles remain silent? Have the prophets now become excommunicated from their role as vicarious carriers of God's message by the very system established to ensure consistency in God's message to the world? Are Mormons to believe that public relations professionals are the new prophets, now endowed with the power to speak vicariously for God? Likely not, but the question of communication persists. The prophets are silent, but the Church continues to speak for God with an uninterrupted messaging not unlike a looped recording of Woodruff's wax cylinder testimony. In fact, the entire practice of vocal vicarity

is threatened with bankruptcy when the communication flow is corrupted by Correlation. Most pressing of all, Correlation continues to ask of Mormons the burning acousmatic question: Who is speaking for whom?

I return to *Book of Mormon* in the remainder of the chapter to discuss how the musical rather unsuspectingly captures this communication crisis within Mormonism. It seems prudent to examine how *Book of Mormon* intercepts and redirects the message of Mormonism through satire. In the context of vocal vicarity, *Book of Mormon* shows how, through interruption, the message of Mormonism can be made different—maybe even improved.

The Mormon Moment

When Mormons first cast their lot with musical theater in 1947 with *Promised Valley*, they did so in part to cash in on whiteness, as I argued in Chapter 2. Their successful integration into American sensibilities came in part through this appropriation of musical theater as wholesome, white, American, assimilationist entertainment. From *The Osmonds* to *The Mormon Tabernacle Choir*, Mormon ideals of virtue and (white) propriety were reinforced through the workings of American musical theater. By the millennium, however, Mormons began receiving flak for being too white, too wholesome, too happy—in effect, for many Americans, Mormons just didn't seem real. In 2008 and again in 2012, presidential hopeful Mitt Romney fulfilled the stereotype many outsiders had of Mormons; his life was so perfect, his offshore accounts so well-stocked, and his hair so perfectly coiffed, that people had a hard time relating to him, or trusting him. As Paul Reeve has written, Mormons tried so hard to overcome their ethnic branding as not-white-enough to become, by the late twentieth and early twenty-first centuries, *too* white.

The same might be said for Mormons and musicals. Mormons had patterned their lives and temperaments, their policies and doctrine, after the sensibilities of the musical theater stage a little

too well. It became very easy under the spotlight of news media for Mormons to appear like characters cut from a book, or from a musical. As the creators of *Book of Mormon* have remarked, Mormons and musicals just seem to go hand in hand. In fact, *Book of Mormon* was not the first time creators Trey Parker and Matt Stone had tried their hand musically lampooning Mormonism. In 2003, their *South Park* television episode “All About the Mormons” musically dramatized Joseph Smith’s First Vision, subsequent visits from the angel Moroni, and Joseph’s methods of translating The Book of Mormon using seer stones tucked inside his hat. As off-camera voices narrate the story, the continuous trope “Dum, dum, dum, dum, dum” is eventually revealed to be a homonym for “dumb.” The off-camera voices thus are conceptualized as a singing Greek chorus, moralizing the errancy of Smith’s claims and the naivety of his early followers.²² Parker and Stone were picking up on a cultural trait in Mormonism that had by then become prominent and used musical theater to critique Mormon beliefs. In an ongoing effort to use musicals to fit in, Mormons became too good at their own game and now they had to pay for it.

Book of Mormon appeared on Broadway in 2011, and travelled in a path eerily similar to the one Mormons charted in the nineteenth century—the show springs up in New York (Broadway), moved to Illinois (Chicago) for an extended run, and then opened the first national tour in the intermountain west (Denver, Colorado). But the story begins several years earlier. The 2008 debacle surrounding Proposition 8 in California—which held in balance the definition of marriage as a union between a man and a woman—catapulted the Mormon Church into the national spotlight when Church leaders encouraged its members to contribute time and resources to the campaign in order to protect traditional conceptions of marriage. The Church reeled from the public outcry against its role in the campaign, and its members suddenly became contestants in a fierce debate over the

consequences of unpopular political involvement. When Broadway veteran Marc Shaiman (*Hairspray*, 2002 and *Catch Me If You Can*, 2009) heard that Scott Eckern, the artistic director of the non-profit California Musical Theatre and also a Mormon, had contributed \$1000 to support the campaign against gay marriage, he immediately set to work on a musical portrait of advocacy called *Prop 8: The Musical*. The musical theater community—heavily reliant on gay creators and performers—was infuriated by Eckern’s contribution, seeing it as an act of betrayal. Jeffrey Seller, a Broadway producer, was among those who felt outrage: “That a man who makes his living exclusively through the musical theater could do something so hurtful to the community that forms his livelihood is a punch in the stomach.”²³ For his part, Eckern eventually resigned from his position at California Musical Theatre and, as a sign of good faith toward the gay community, contributed \$1000 to a gay rights group. Still, the association between Mormons and Proposition 8 was thick, and Eckern’s position thrust musical theater into the mix in a satirical representation of religious infringement on civil rights.

Shaiman wrote *Prop 8: The Musical* in one day, filmed it with a cast of Hollywood regulars including Jack Black, Neil Patrick Harris, and John C. Reilly, and, through the site funnyordie.com, the video became an instant hit—what Shaiman later called a “viral picket sign.” Although the musical is barely over three minutes long, it characterizes the gay community as complacent and naive in the wake of Barrack Obama’s 2008 presidential election;²⁴ it also colors religious figures—

²³ Quoted in Jesse McKinley, “Theater Director Resigns Amid Gay-Rights Ire,” *New York Times*, 12 November 2008. <<http://www.nytimes.com/2008/11/13/theater/13thea.html>> (Accessed 22 March 2015).

²⁴ Shaiman originally toyed with the idea of basing the musical around the poppy field scene in *The Wizard of Oz*: “I said, ‘Well, maybe that first section should be all of us on a hill, with poppies, and it snows and we’re put to sleep, and then the Proposition 8 people are looking through the crystal ball, like the Wicked Witch of the West in ‘The Wizard of Oz.’ Because that’s what happened. We stupidly allowed ourselves to be lulled into a sense of, everything’s fantastic now, look—everything’s changing. And this couldn’t possibly be voted into law. This is just like some little pesky thing that we’re swatting at, and it will go away immediately.” Quoted in Dave Itzkoff, “Marc Shaiman on ‘Prop 8—The Musical,’” *New York Times* 4 December 2008.

who are dressed in a number of various signifying religious clothing, the prominent dark suit, white shirt, and tie of Mormon men chief among them—as hateful and scripturally selective in their condemnation of homosexuality. When Jesus appears to the gathered multitude, he condemns the religious zealot’s selectivity, telling them that if they are going to pick and choose, they should choose love instead of hate. Finally, Neil Patrick Harris enters the stage and reminds everyone that there is money to be made in lavish gay weddings, which finally unites the two divided groups in a common goal of using the surplus money from gay marriages to save the faltering American economy.

The drama surrounding Proposition 8 and the Mormon Church did not wane easily. After the outcome of Proposition 8 was overturned in the Ninth Court of Appeals, a new drama unfurled, though this time a staged one. Entitled *8*, the play was a direct reenactment of the court proceedings in the case *Perry v. Schwarzenegger*.²⁵ A Los Angeles performance of the play took place on March 3, 2012, and, as with *Prop 8: The Musical*, featured a lineup of some of the most prominent stars in Hollywood, including George Clooney, Kevin Bacon, Brad Pitt, Jamie Lee Curtis, and John C. Reilly, but also the Tony-nominated actor from *Book of Mormon*, Rory O’Malley. Well-known for his role as Elder McKinley, the closeted missionary who sings of suppressing “gay thoughts” in order to remain worthy in the eyes of the Church, O’Malley provides just one possible hinge between the vitriol surrounding Proposition 8 and the crass jocularity of *Book of Mormon*. Indeed, given the opening of *Book of Mormon* on Broadway happened precisely three years after Proposition 8 was up for vote, one could consider the parodying of Mormons on stage by a host of gay or gay-advocate

<http://artsbeat.blogs.nytimes.com/2008/12/04/marc-shaiman-on-prop-8-the-musical/?_r=0> (Accessed 22 March 2015).

²⁵ *Perry v. Schwarzenegger* (later changed to *Hollingsworth v. Perry*) was the federal case that resulted in Proposition 8 being ruled unconstitutional. The plaintiffs were same-sex couple Kristin Perry and Sandra Stier, who in 2009 were denied a marriage license in Alameda County, California because they were gay.

performers a form of cultural retribution. If the Mormon Church had enough power to sway legislation against the gay community, then the musical theater community could go one better by putting on stage a version of Mormonism where openly gay men could don the label of Mormon missionary, preach a particularly queer gospel of inclusion, and through the magic of musical theater interrupt the message of one of the fastest-growing religions in the country.

When *Book of Mormon* opened on Broadway the Mormon Church could not have been prepared for the attention it received. The show is crass, its characters foul-mouthed, and its depictions of religious piety irreverent. Yet Mormons reacted with aplomb. The Church immediately distanced itself from the production, but also bought ads in the Playbill (Figure 5.1). Actual missionaries stood outside the theaters of Times Square and handed out copies of the actual Book of Mormon. The Church publicized at least one conversion connected directly to the show.²⁶ The Church's official response to the musical also comes off as underplaying the jokes being waged at its expense: "The production may attempt to entertain audiences for an evening, but the Book of Mormon as a volume of scripture will change people's lives forever by bringing them closer to Christ."²⁷ Mormons did a very American thing by making lemonade out of lemons. What else would we expect them to do?

Book of Mormon

In *Book of Mormon*, two dynamic and seemingly incompatible worlds are brought together in resolution. Mormonism—in this show an only somewhat-exaggerated white-bread religion with absurd beliefs and practices, replete with an uncompromising system of rules, conventions, and routines—is the world the principal characters Elder Kevin Price and Elder Arnold Cunningham represent and promote. This oddball missionary duo gets transplanted from suburban America to a remote village in Uganda where they find themselves in a ludicrously challenging environment. A warlord runs the village they are assigned to evangelize, a severe AIDS epidemic has led villagers to take unmentionable measures for cure, and female genital mutilation is commonplace. These atrocities—hardly conventional fodder for a successful comedy—are yet so pervasive and outlandish they become the primary jokes for the show, discomfiting the dumbfounded Mormon missionaries

while also framing life in Africa as a lesson in grit and hard luck. Elders Price and Cunningham, along with other Mormon missionaries in the area, enter Uganda with a naively optimistic proselytizing and colonizing agenda; the story becomes a musical, however, in the ways the missionaries are themselves changed in the process, and the Ugandans converted to American musical theater—a clever but suitable stand-in for Mormonism.

As I have argued throughout this dissertation, the Mormon faith is distinctly a performative one, a characteristic the non-Mormon creators clued in to when structuring the show. In fact, part of what makes the otherwise screwball *Book of Mormon* characters so engaging, and even compelling, is that, like the actors on stage, actual Mormon missionaries are also performing a role, wearing a costume and often sporting a larger than life optimism with carefully scripted lines. Real Mormons are also quite fond of musical theater which, along with *Star Wars*, *Lord of the Rings*, and other vanguards of “nerdy” popular culture, also informs the worldview of Elders Price and Cunningham. Given the unique Mormon preoccupation with musicals, I would even argue that musical theater *is* the language of Mormonism. Therefore it seems reasonable that *Book of Mormon* features moments when the characters are compelled to actually vocalize not as characters in a show but as real Mormons might do.

A good example of this last point is Elder Price’s eleventh-hour song of renewed faith, “I Believe.” Inasmuch as Mormonism is a pastiche of religious tenets, the *Book of Mormon* is a pastiche of several iconic musical theater tropes and tunes. “I Believe” is no exception. First of all, the five note motif on the words “I am a Mormon” in “I Believe” is lifted directly from the opening fanfare of the enormously popular Hill Cumorah Pageant (Example 5.1). Surely only Mormons would hear this allusion (and not many Mormons would ever be in the audience for *Book of Mormon*), yet the moment of Elder Price’s great testament is nonetheless framed by a familiar motif of Mormon musical and theatrical tradition, placing his testimony squarely within the realm of sincere, authentic

Mormon conviction. The amount of musical allusion in *Book of Mormon* also hints at a different kind of vicarity. By alluding to other musical theater characters well known to theater enthusiasts, *Book of Mormon* creators create a space where new character identities are constructed using older material, in a way consistent with the meta-musical strategies of other post-millennial shows.

Example 5.1:

Five-note motif in “I Believe” (top), music and lyrics by Trey Parker, Robert Lopez, and Matt Stone, quoting the introductory brass fanfare (transposed and reduced) from *The Hill Cumorah Pageant* (bottom), music by Crawford Gates.

For example, the orchestration and lyrical wit of “I Believe” place Elder Price’s existential reflection within the framework of “I Have Confidence”— Maria von Trapp’s tribute to courage featured in the film version of *The Sound of Music*. Thus, “A captain with seven children—what’s so fearsome about that?” becomes “A warlord who shoots people in the face. What’s so scary about that?” Just prior to that line, the orchestra pulsates with the same energy of Rodgers and Hammerstein’s musical as Elder Price sings:

It was all s’posed to be all so exciting,
 to be teaching of Christ ‘cross the sea.
 But I allowed my faith to be shaken.
 Oh, what’s the matter with me?

This verse and its musical language are obviously modeled on *The Sound of Music* (see Examples 5.2 and 5.3). This allusion places Elder Price in dramatic proximity to Maria, and insists on a similarity between mounting courage to leave the sheltering comforts of convent life to govern a full house of children and the bravery necessary to reclaim one's faith. Indeed, both Maria and Price are in essence earnestly seeking a real, lived experience of their faith by stepping outside the borders of religious doxy and into the realm of religious praxy.

Example 5.2:

Excerpt of "I Believe," from *Book of Mormon* (2011). Music and lyrics by Trey Parker, Robert Lopez, and Matt Stone.

The musical score is presented in three systems, each with a vocal line and piano accompaniment. The key signature is one flat (B-flat) and the time signature is 4/4. The lyrics are: "It was s'posed to be all - so ex - cit - ing, to be teach - ing of Christ - 'cross the sea. - But I al - lowed my faith to be sha - ken. Oh, what's the mat - ter with me?"

Example 5.3:

Excerpt of "I Have Confidence," from the 20th Century Fox film *The Sound of Music* (1965). Music and lyrics by Richard Rodgers.

The image shows a musical score for the song "I Have Confidence" from the film *The Sound of Music*. It is divided into two systems. The first system is for Maria, with a vocal line and a piano accompaniment. The lyrics are: "It could be so ex - cit - ing to be out in the world, to be free. My". The second system is for M. (Mother), with a vocal line and a piano accompaniment. The lyrics are: "heart should be wild - ly re - joic - ing. Oh, what's the mat - ter with me?". The score is written in G major (one sharp) and common time (C). The piano accompaniment features a steady eighth-note pattern in the right hand and chords in the left hand.

These moments from *The Sound of Music* and *Book of Mormon* also offer a realistic glimpse into the character's actual practice. It is not difficult to imagine a gifted singer like the real Maria von Trapp singing, even to herself, in moments of anxiety as she "seeks the courage [she] lacks." Likewise, the rest of "I Believe" is built around the formulations Mormons regularly attend to when bearing testimony. The frequency of the words "I believe," followed by a series of what seems to be an increasingly bizarre and humorous litany of dogma, is in truth a real matter of practice an actual Mormon missionary would engage, in this case as a buffer against encroaching doubt. This wording is also directly related to the "Credo" of the Catholic Mass and the Catholic and Protestant recitation of the Apostles Creed, further linking the vocal practices of both Elder Price and Maria. Therefore, the act of singing "I Believe," just like the act of singing "I Have Confidence," should be understood as a moment when the character steps through the conventions of the musical stage and "sings for himself," as it may be—singing not only as a musical character, but also as a real expression built

from necessity and experience in that moment. It is here that the singing-as-community of *Promised Valley* Mormonism moves to singing-as-practice of modern Mormonism.

As this example illustrates, the creators of *Book of Mormon* build pastiche through frequent allusion. These moments point to other musicals, but in doing so they also suggest connections between *Book of Mormon* characters and characters elsewhere in the musical theater canon. Deciphering the coded language of pastiche and allusion has always required a nuanced knowledge of the source material. Musicologists such as Charles Rosen, Raymond Knapp, Peter Burkholder, and Christopher Alan Reynolds have done important work in understanding musical allusions, especially in music of the nineteenth century.²⁸ Their work demonstrates that breaking the code of musical allusion requires less the mechanistic mind of a Turing machine than a careful and considered understanding of the rich expressive vocabulary of which such allusions were a part. Musical and motivic resemblances are not quite the same thing as a musical allusion, of course; Charles Rosen warns that it is “only too easy to produce uninteresting triviality by finding similar or identical motifs in unrelated passages, particularly in tonal music.”²⁹ Christopher Alan Reynolds makes clear the difference between allusion and resemblances in his definition of allusion as “an intentional reference to another work made by means of a resemblance that affects the meaning conveyed to those who recognize it.”³⁰ It is not enough for a work or phrase or motive to sound like something else; such compositional bumping-of-elbows are an inevitability within a tightly controlled and finite harmonic and melodic vocabulary, as Rosen points out. Rather, musicologists

²⁸ See for example Charles Rosen, *The Frontiers of Meaning: Three Informal Lectures on Music* (New York: Hill and Wang, 1994); Raymond Knapp, “Brahms and the Anxiety of Allusion,” *Journal of Musicological Research* 18(1) (1998): 1-30; Peter Burkholder, *All Made of Tunes: Charles Ives and the Uses of Musical Borrowing* (New Haven: Yale University Press, 2004); and Christopher Alan Reynolds, *Motives for Allusion: Context and Content in Nineteenth-Century Music* (Cambridge, MA: Harvard University Press, 2003).

³⁰ Reynolds, *Motives for Allusion*, 6.

are more interested in the intentionality behind allusions—the conventions and expectations for allusions held by nineteenth-century composers and audiences that continue to charm, delight, frustrate, mystify, and stupefy listeners still today—and how uncovering those intentions can open up new possibilities for listening to music from this era.

The same motive can be applied to *Book of Mormon*. Reynolds demarcates various functions of musical allusions into two broad groups—*assimilative* and *contrastive*, the difference being either “an allusion can accept the meaning of the earlier text or use it to create another meaning.”³¹ He chooses a dual theoretical skeleton on which to flesh out these two groups of musical allusions. Bakhtin’s theories of double-voicedness prove a useful ancillary for Reynolds’s grouping, as he takes a clever reading of Bakhtin’s “unidirectional” and “varidirectional” discourse to underline the functions of assimilative and contrastive allusions. Inasmuch as “unidirectional” discourse supports the original meaning of a text and “varidirectional” discourse parodies or ironizes the original meaning, so too does Reynolds argue composers used these two forms of allusion to either work with or against the original source material. Secondly, and less pervasively than Bakhtin, Reynolds keeps in hand Johan Huizinga’s theories of play to capitalize on how composers and audiences perhaps understood musical metaphor as a form of play. Etymologically, “allude” means “to play on,” and Reynolds’s reading of Huizinga’s playfulness acts as a convenient drop cloth to collect musical moments that otherwise fall off the page unnoticed and undeciphered.

As seen in Examples 5.4 and 5.5, the piano motif in the opening bars of “Sal Tlay Ka Siti,” sung by Ugandan dreamer Nabalungi, allude to the piano introduction from Audrey’s song “Somewhere That’s Green” from *Little Shop of Horrors* (1982, Off-Broadway). Nabalungi sings of a place “where human life has worth” which, having now met the Mormon missionaries, she

³¹ Reynolds, *Motives for Allusion*, 16.

understands to be Salt Lake City, Utah. Similarly, Audrey feels trapped in the slums of Skid Row and sings about her fantasies of leading an idyllic family life “far from Skid Row.” Both songs share a sentiment about hoping for a better life in the suburbs and both characters are humorously naive and somewhat misinformed about the prospects of life elsewhere.

Example 5.4:

Example 5.5:

The musical allusion, however, offers listeners the opportunity to hear the specificity of Audrey in Nabulungi. We are to understand that the dreams of an Audrey are not all that dissimilar from those of a Nabulungi, though they are oceans and worlds apart. Not only that, but Nabulungi’s singing places her within the narrative and musical structures of musical theater. Until this point, Nabulungi has only been heard singing as an African and like an African (“Hasa Diga Eebowai”); it is after she learns about the Mormon prophet Joseph Smith from the missionaries that she reveals

hints of assimilation and conversion by singing the language of musical theater. “I Believe” and “Sal Tlay Ka Siti” thus help frame Elder Price and Nabulungi as representative members of these opposing worlds.

The climax of the show, however, demonstrates musically how the Mormons and Africans can be united through the unique way Elder Cunningham miscommunicates the message he is sent to deliver. Using a grab bag of Mormon theology and popular culture references, Elder Cunningham manages to convert several of the villagers who are taken in by his evocative, nonsensical stories. In true Mormon fashion, Nabulungi organizes a musical pageant that visiting Mormon leaders will attend. Like the Hill Cumorah pageant that was quoted in “I Believe,” the villager’s pageant also dramatizes the story of Joseph Smith’s encounter with God. Yet in “Joseph Smith American Moses,” the Africans perform the absurdity of Elder Cunningham’s religious teachings, which now include a wizard angel Moroni, a visit from the Starship Enterprise, and a magical “fuck frog” that Smith uses to cure AIDS. The ridiculous pageant serves as a catalyst for the final reconciliation of the show and demonstrates how the act of singing and performing can bridge the world of Africa with that of Mormonism.

“Joseph Smith American Moses” shares some characteristics with another musical pageant within a musical, “Small House of Uncle Thomas” from *The King and I*. These two scenes are both narrated by a female character in broken English (with mispronunciations of American geography such as Tuptim’s “Oheeo” and Nabulungi’s “Oopstate New York”), and their eagerness to engage an unfamiliar language is second only to a desire to perform in the styles of American musical theater. Indeed, Anna gives Tuptim a copy of *Uncle Tom’s Cabin* as part of her sustained effort to civilize her Siamese hosts, and Nabulungi is being taught Mormonism for similar reasons. And because both women show signs of their assimilation by modeling American practices of the theater, Tuptim and Nabulungi are similarly motivated to put on a show. In *The King and I*, Tuptim sees

within the story of *Uncle Tom's Cabin* a metaphor for her oppression and uses the performance to stage a performative coup against the king. She misunderstands, or perhaps takes too literally, Harriet Beecher Stowe's title, however, leaving her audience instead with the humorous title "Small House of Uncle Thomas."

Raymond Knapp relates "Small House of Uncle Thomas" to the story of Moses, arguing that, fundamentally, both stories are about escaping slavery.³² Similarly, Nabulungi's pageant title "Joseph Smith American Moses" mixes up the Mormon honorifics (it is Brigham Young, not Joseph Smith, who is referred to as "the American Moses") but in doing so makes obvious how her story connects to that of Tuptim. Nabulungi is attempting a different kind of escape—from a village terrorized by warlords and overrun with an AIDS epidemic—but the stakes for her are just as high. Nabulungi seems sincerely arrested by the message of the pageant and, along with the other villagers, is very much enjoying the performance. In fact, both Tuptim and Nabulungi latch onto the escapist quality of musical drama, playing out through the pageant a brazen political critique and tying up loose ends with musical theater's typical happy ending. "Joseph Smith American Moses" therefore takes on the musical qualities of what the show has heretofore designated as "African"—drum-inflected and upbeat rhythms with prominent call and response sections, also allusions to another musical repeatedly spoofed in the show, *The Lion King* (1997)—with the lyrics supporting a version of Mormonism steeped in folklore, Western cultural idioms, and unseemly superstition.

When the appalled Mormon leaders disband the missionaries and revoke the villager's memberships as punishment—perhaps for not "performing" Mormonism correctly—Elder Price realizes the potency of this new eclectic Mormonism and applauds Elder Cunningham's unique ability to mix up his religion. Thus the pageant acts as a "marriage" not only between Mormons and

³² Raymond Knapp, *American Musical Theater and the Formation of National Identity* (Princeton: Princeton University Press, 2006), 263.

Africans, musically uniting the sounds of Africa with the sentiments of bastardized Mormonism, but also the worlds of orthodoxy and modernity—the takeaway message at the end of the musical being that the traditional Mormon culture must embrace change and flexibility in order to survive, and that the opportunity to self-fashion the religion’s myths to meet the needs of the Africans will provide the villagers a system of grace and benevolence from which they may be able to improve their livelihoods.

As Matt Stone relates, *Book of Mormon* prods the necessarily ridiculous quality of faith which, by definition, does not assume plausibility. “There’s a catharsis in being able to really laugh at some of the goofier ideas of religion, without necessarily laughing at the people practicing them,” says Stone. “I think it feels good to in some ways acknowledge that certain aspects of religion are just silly. But whatever anybody’s religion is, we should be able to laugh at it and at the same time understand that we should accept people who believe and have faith, without dismissing their lives as unserious.” Stone later adds that he and Parker “never wanted the musical to pretend it had any answers. We wanted to be funny and put on great numbers and get some of our ideas out there.”³³ Stone and Parker’s satire, in other words, derives easily from the subject matter provided by Mormonism, its truthfulness self-evident and readily apparent. In a grand act of cultural vicarity, the show speaks on behalf of Mormonism, showing Mormons and non-Mormons alike an example of what happens when Mormonism gets synthesized with other ideologies—a practice similar to how Mormonism itself arose, but which has been absent from Mormonism since the mid-twentieth century. The same attributes that once made the Church easy fodder for faith-promoting Mormon musicals have become digested by popular culture and excreted as a foul-mouthed inversion of

itself. How else could Michael Hicks have written that, “even without the words, the show would feel like a Mormon musical”?³⁴

Voice Interrupted

Indeed, the Mormonism that *Book of Mormon* moralizes with and against is one that exists today only in principle. The process of Correlation ensures that Mormonism cannot expand beyond its current scope. The prophets may continue to speak, but they cannot speak beyond the dictates of a Correlation committee. Joseph Smith envisioned a religion that could synthesize all the world’s truths into “one great whole” as part of what became known as “the fulness of the gospel.” The only way to sort out truth from untruth in this great mixture of affirmations was sensual, meaning the receiver of truths must attune himself to how his body resonates with the message. When Oliver Cowdery attempted to translate *The Book of Mormon* himself, Joseph received a revelation that has become the method of sensing truthfulness awash in a great sea of philosophical musings.

But, behold, I say unto you, that you must study it out in your mind; then you must ask me if it be right, and if it is right I will cause that your bosom shall burn within you; therefore, you shall feel that it is right. But if it be not right you shall have no feelings, but you shall have a stupor of thought that shall cause you to forget the thing which is wrong; therefore, you cannot write that which is sacred save it be given you from me.³⁵

The take-away from Cowdery’s lesson (other than his failure to translate a single word of the manuscript) is that the body can detect truth as it *senses* it. This theory suggests a seamless, unvaried reception of truth from person to person, although in practice we must admit that such a universal

³⁵ D&C 9:8-9.

reception could never take place in exactly such a fashion. Importantly, it is a stupor of thought—an *interruption*—that shows the receiver there are errors in his thinking.

Nonetheless, Correlated Mormonism presumes all hearers of the Mormon message will listen and feel the message in more or less the same way. An increasingly persistent message within Mormonism is the idea that universality of perception is baked into The Book of Mormon itself, even as the prophets and Mormon laity alike model universal vocality in their speech. The final pages of The Book of Mormon feature what has been dubbed “Moroni’s promise,” a tribute to the perceptive power given to all people. The prophet Moroni (the gilded figure with trumpet to his lips famously perched atop almost every Mormon temple) asks future hearers and readers of The Book of Mormon to “ask God, the Eternal Father, in the name of Christ, if these things are not true; and if ye shall ask with a sincere heart, with real intent, having faith in Christ, he will manifest the truth of it unto you, by the power of the Holy Ghost. And by the power of the Holy Ghost ye may know the truth of all things.”³⁶ Whereas outside of these verses Moroni is clearly suggesting that “these things” constitute the truthfulness of the message of The Book of Mormon (which, inarguably, is to believe in Christ), the Mormon Church has instructed missionaries to use these verses as a litmus test for investigators to gain a testimony of the literal truthfulness *of the book itself*. The differences between the medium and message in this case are slight, but important. Accepting the *message* as true does not mean the receiver must accept the stories surrounding the book’s inception as true, nor does it mean readers must necessarily accept every word of the book as infallible. On the other hand, if those verses are meant to confirm the truthfulness of The Book of Mormon as a *medium* for that message, then the book and its surrounding genesis story are what make the message meaningful and true.

³⁶ Moroni 10: 4-5.

I suggest that Correlated Mormonism has made the former belief nearly impossible to sustain in the light of the latter. The assumptions of universality that have been read into Moroni's promise suggest that Mormonism is a singular, streamlined, and unfaltering message preserved from the beginning of humanity. Under this ideology humans are presumably hard-wired with the perceptive ability to sense truth in black and white terms: Moroni's *promise*, by definition, insists that all people can know its truthfulness. Therefore The Book of Mormon is either true or it is not. A more nuanced understanding or appreciation of The Book of Mormon or its message is made suspect under these provisions. Mormons who find comfort in the message of redemption, love, and tranquility within The Book of Mormon, but who are skeptical of it being an ancient script hewn from the hillside by a frontier prophet, have found it difficult to navigate within a Correlated sociality that has made message and medium one and the same. Moreover, Mormons who are willing to accept the message of Mormonism as true but who distance themselves from the Church and its policies also find themselves in an almost indefensible position.

The multivalent message of Joseph Smith's Mormonism, then, has lost stock over the last several decades to a more powerful expression of Mormonism, one that recognizes only exact replications of itself. In all things, from ideology to voice to dress to behavior, Mormons find themselves replicating a standard established through Correlation. This exacting standard insists that Mormonism isn't Mormonism unless practiced the ways verified through the Correlation committee. And, as I have argued here, the message of Mormonism must necessarily be communicated the exact same way in all settings, lest it lose its identity as "official." For all the clamor of Correlation's homogenized message, Mormons today may have difficulty sensing the promised stupor of thought, the interrupting gesture signaling wildly that something is amuck.

Book of Mormon makes an intriguing claim about contemporary Mormonism—that only through such disruption can the Mormon message become meaningful again. From the opening

number of the show, Elder Cunningham is obvious in his departures from the Mormon norm. While receiving training to be a Mormon missionary, officials must repeatedly correct Cunningham, admonishing him to stop “making things up.” Indeed, Elder Cunningham later admits that he is a pathological liar and has never read The Book of Mormon. This certainly goes a long way in explaining why and how the Ugandans present a confused version of the conventional Mormon narrative during the pageant.

Although humorously out of step, Elder Cunningham’s fusion of mythologies is in truth a modern version of Joseph’s synthesis project. This is all the more convincing when Elder Cunningham’s efforts pay off: the Ugandans discover through his synthesis of Mormonism and popular culture a meaningful narrative for constructively dealing with their reality in less harmful or demeaning ways. In providing the villagers with a powerful new mythology, and along the way upsetting the Mormon narrative through a combination of ignorance and ingenuity (hence his *cunning* nature), Elder Cunningham actually highlights the limitations of the singular, seamless message within Correlated Mormonism. Like Joseph Smith before him, Elder Cunningham is the American anti-hero who is able to take a narrative perceived as broken and reconstitute it in a synthesized form with broader appeal. In the end it matters little that Elder Cunningham is peddling the Ugandans an unauthorized version of Mormon mythology. As John Updike reminds us about myths and beliefs, “The crucial question isn’t Can you prove it? but Does it give us a handle on the reality that otherwise would overwhelm us?”³⁷

In effect, Elder Cunningham’s version of Mormonism interrupts the flow of Correlated Mormonism. It is possible that such an interruption, the stupor of thought, is exactly what Mormonism needs to remain relevant. This essentially upholds Kierkegaard’s point discussed earlier

³⁷ John Updike, *The Coup: A Novel* (New York: Random House Publishing Group, 2012), 143.

in the dissertation that only through *indirect* communication with the divine can a person come to have faith in God. Indeed, in an innovative reading of Levinas's study of ethics, Amit Pinchevski argues that *lapses* in communication, not successful transmission, actually create a space for an ethical system of communication. He argues that what is typically understood as effective communication, when ideas are translated from one person to another without interruption or misunderstanding, withholds the possibility for the speaker and listener to understand the Other. Instead, interruption "is an intrinsic and positive condition of communication, indeed of ethical communication, and this marks the beginning rather than the end of generosity and compassion."³⁸ In his Levinasian retelling of the story of Babel, for example, Pinchevski sees the story as an example of God's benevolence rather than his vengeance; the collapsing tower "caused the people of Babel to retract their gazes from the tower to one another's faces, acknowledging, maybe for the first time, that they were different, finite, separate—a dialogue of baffled faces."³⁹

Thus Elder Cunningham's interruption of Mormonism's singular narrative creates a space where a true "dialogue of baffled faces" can take place, where multiple voices and concerns can be made known, and where various ways of sounding can strengthen, rather than being perceived as weakening, the message. He makes Mormonism relevant to the Ugandans by unknowingly bastardizing its core doctrines. As much as this might seem perverse to many Mormons, "Joseph Smith American Moses" also serves as an example of how vocal perversity can sometimes be just what is needed to enliven religion—in fact, such was the project of Joseph Smith.

It could even be argued that *Book of Mormon* does Mormonism better than Mormons can do Mormonism. The faith today is dominated by a machinery that sees interruption as dissent—and

dissent as intolerable—and is therefore bound to constantly repeat itself, like the ghostly echoes of Woodruff's recorded testimony. Interruption or misunderstanding allows words to get stuck, and forces the speaker to take a different approach with the receiver's complex identity in mind. It makes sacred the gently cocked head of confusion, the translator's thick tongue; through such communicative lapses Mormonism can reclaim compassionate speech and intentional language, what Charles Hirschkind calls an "ethical soundscape."⁴⁰ As it did with Elder Cunningham in *Book of Mormon*, it may well be that the interrupted voice speaks louder and farther than the ceaseless message Correlation espouses. If it weren't the case, then we might all be merely speaking into the air.

Conclusion

Musical theater has thrived in Mormon culture for generations, and will likely continue to do so. What effects the impervious satire of musical theater exacts upon Mormonism remains a matter unresolved. As Mormons confront its satirical attackers it does so at a serious disadvantage given that the medium of musical theater seems so expertly chosen to cause the most damage. Inasmuch as musical theater has been for Mormons a balm and entertainment, a means of self-expression as well as identity, it has lately taken the shape of the legendary horse left outside the gates of Troy. The horse was the emblem of the city, Odysseus remembered, and could easily deceive with its flattery. If Mormon culture had an emblem, then perhaps it would be the theater and, like the horse of the Trojans, a means of understanding itself. Destruction need not ensue, of course. It is the favorable environment for satire that chokes true discourse—discourse not left awash in a sea of falsely dichotomized conceptions of belief and doubt. "There was belief before there was doubt,"

⁴⁰ Charles Hirschkind, *The Ethical Soundscape: Cassette Sermons and Islamic Counterpublics* (New York: Columbia University Press, 2006).

Jennifer Michael Hecht has eloquently argued, “but only after there was a culture of doubt could there be the kind of active believing that is at the center of modern faiths.”⁴¹

The kind of musical theater satire leveled at the Mormon Church in the last few years mimics the lampooning prominent on nineteenth-century musical stages. Mormons have come full circle with musical theater, it seems. Once serving as a venue of oppression and cruelty toward Mormons, musicals became a source of control over the discourse surrounding whiteness and American acceptance. The story of Mormons and musical theater might well be a fitting encapsulation of the American interception of modernity. Musical and Mormonism have come a long way since their rootedness in Jacksonian principles; their regional genesis quickly fanned out to become immense global expressions of American values. In the meantime, America changed. What was once ideal and reputable has become goofy and outmoded, and Broadway and Mormonism have been forced to pay for their naive pasts with cynicism and guffaws. The musical theater industry opted to change its image by aggressively appropriating popular music genres, such as rock (*Jesus Christ Superstar*), hip hop (*Hamilton*), and country (*Hands on a Hard Body*). Mormon leaders have chosen a more passive response, having faith that stasis will eventually reveal the radical qualities of Mormon ideals. As a result, musical theater has begun to escape Mormonism as its once-familiar venue for practicing its theology of voice. *Book of Mormon* is one example of this fallout—its message both a condemnation and, as this chapter argues, an invitation to become something better. In the end, the tale of Mormons and musicals is another story about how new ways of *sounding* create opportunities for other ways of *living*.

Mark Twain’s short story from 1876, “A Literary Nightmare,” humorously depicts a situation where a persistent message—in his case, a rhyme: “Punch, brothers! punch with care!

⁴¹ Jennifer Michael Hecht, *Doubt: A History: The Great Doubters and Their Legacy of Innovation from Socrates and Jesus to Thomas Jefferson and Emily Dickinson* (New York: Harper Collins, 2003), xxi.

/Punch in the presence of the passengere!”—haunts the narrator’s thoughts until passed on to another unsuspecting victim within earshot. The troubling ear worm infects the minds of other travelers and friends. Finally rid of the problem himself, the narrator takes his friend (who is now beset with the malady) to a university, and “made him discharge the burden of his persecuting rhymes into the eager ears of the poor, unthinking students. How is it with them, now? The result is too sad to tell.” Only through regurgitating the offending material could the troubled mind find rest from the incessant message. Twain concludes with a warning to his readers, “if you should come across those merciless rhymes, to avoid them—avoid them as you would a pestilence.”

Such a ludicrous, yet sympathetic, story seems fitting for our conclusion. The persistent, troubling narrative espoused by the Mormon Church since Correlation has prevented the possibilities for parallel or competing narratives in Mormonism to survive in the open. The theological underpinnings that guided vocal vicarity from Mormonism’s inception have been put asunder by a dominating policy machine that suggests seamless messaging will ensure relevance. As I have been suggesting in this chapter, however, that ideology of communication undermines the vitality of a religion built upon a foundation of dusty voices speaking on behalf of a people long-forgotten. Their quiet whispers insist we listen more closely.
